Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Donald Polmann,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Ying Ye

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald J. Polmann,

I would like to ask how just how many more tens of thousands of acres of trees and thousands of houses will have to be destroyed in fire seasons that are now 2.5 MONTHS longer than they used to be because our planet is burning up from the devastating climate change? How many BILLIONS of dollars must we spend every single year, making it trillions upon trillions in total, just to get not even back to where we were, because the air quality is worse and worse without the trees, and we keep using fossil fuels due to these “utility front companies” who just won’t recognize how much better off we ALL will be, including THEM, when we migrate to 100% Clean Energy?! The jobs will be there, they will pay well, they will be cleaner, and our AIR AND WATER will be cleaner!

Because of the pandemic and the horribly irresponsible response from the executive branch and lethargic response from the republican senate, we are likely headed into a depression! The senate’s GOP just can’t grasp that the states and localities MUST have financial aid to make up for their horrendous covid expenditures that should have been covered by a federal plan that was NON-EXISTANT!

As a result, an already totally shaken economy—Wall Street is NOT, NOT, NOT “the economy”—will be even worse, much worse. So now is absolutely NOT the time to be messing around and making it even MORE uncertain, not that there is a time anyway. We The People have a clear right to our solar energy AND its output, meaning our utility companies absolutely owe us fair price for the energy WE and OUR panels produce. Stealing from us should be just like stealing anything else and punishable by law along with “pain and suffering.”

I am sick and tired of having corporations and their “front men” think they own the world. That is EXACTLY why the Consumer Protection Agency was created: to deal with exactly this kind of theft FROM consumers.

We will not stand for it.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people’s pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, “solar installer” was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Susan Lee
