Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Gary Clark,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Mike Wheat

Subject: New solar customer

Dear Commissioner Gary Clark,

Good morning;

My wife and I entered into a lease with sunrun and our system has been online for about 30 days. Without net metering, the system would not be economically feasible without a battery that costs tens of thousands of dollars. Altering or reducing the net metering rules will empower the utilities to exploit the consumer by forcing them to pay a higher utility bill while excess energy is either wasted or worse yet, stolen by the power company without just compensation.

With the abundance of sunshine and with the economic and climate challenges we face, there is no logical or rational basis to reduce alter or diminish current net metering rules.

Doing so may implicate Florida residents' due process, our constitutional right to contract and may amount to an unlawful taking of property. It would also kill residential solar with no justification, only to help the utilities maintain control and increase their profits over the interests of the people of Florida.

I also agree with the following;

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving (or improving and expanding but NOT reducing or diminishing) our successful net metering rules here in Florida.

I am happy to provide comments during today's meeting if you want to call me at 8134048749 or send me an access link.

Thank you

Sincerely,

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Gary Clark,

I am a Net Metering Customer. Have invested \$ 25000.- My solar system is sending power to the grid - the more sunshine - the more FPL gets when they needed it most.

Then evenings, I get Power from the grid, just a bit since evenings are not so energy demanding. No sun and cooler temperatures.

I think this makes sense, letting customers footing the bill so that the utilities do not have to expand their power productions, and the customers are having peace of mind that they do their part to help with the environment. I only pay \$ 10 - \$ 20 a month and this is to maintain my small part of the power line, which never needed anything. I am willing to speak about that.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Greetings, Harold Brandner

Subject: Please Do Not Roll Back Net Metering!

Dear Commissioner Gary Clark,

>Why aren't the utilities looking toward solar as an alternative to fossil fuels instead of as a competitor? There are companies with large-scale installation capabilities that can help utilities convert to solar production. This would save them money in the long run, as solar energy costs less to produce - it would be less work for the utility, with the same or greater profits if they keep their rates the same. Plus less emissions in the atmosphere.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Ronald Chick

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

The citizens of Florida are outraged at the lackluster representation we are afforded by our elected and appointed officials. At a time when we are realizing drastic changes in our environment due to climate change, it seems unconscionable that you would not consider any options to support and encourage the installation and use of solar power. The "net metering" aspect is a win/win for the local communities as there will be less demand to purchase "surplus energy" from out of area providers when we experience high demand use periods. A reasonable fee structure is not an unreasonable or unobtainable solution to this environmentally responsible and forward thinking movement. Your support in this matter is expected and appreciated.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Gail Whitten

Dear Commissioner Gary Clark,

DO NOT roll back net-metering! The profits of a monopolizing entity should NEVER come at the cost of the Americans footing the bill! I'm tired of padding the pockets of corporations and utilities just because they know we don't have any other company to choose from! Just for the fact that we cannot shop around and negotiate the cost of our electricity; we should be allowed to use whatever means necessary to save money and limit the impact on our environment! The power companies profit is NO REASON to roll back anything! The voters chose net-metering and the voters should be the ONLY ones to change it! Americans can barely pay their bills as it is and the power companies only concern is a little dip in their profits!?! LOOK UP AND SEE WHAT THE CEO'S of Floridas power companies make! It's disgusting! We make less than \$40k and manage to survive!!!

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.
