Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Carole Proffitt

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

We should think about ways to make the solar system cheaper for the people that want to install them instead of making the power companies richer. I have panels installed on my roof and I am saving around \$200 a month but I am still paying to the FPL.

Sincerely,
Jaime Fontanella

Dear Commissioner Julie Imanuel Brown,

Now, or ever is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing multitudes of good paying local jobs.

Rather than be number 1 in solar energy production in the US, Florida was only ranked 4th. We should be employing thousands more people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Donald Chambers

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Paul Yorke

Dear Commissioner Julie Imanuel Brown,

I personally would appreciate that all utility companies be far more open to personal solar generation as I have invested a great deal of time researching dozens of systems and it is my opinion that the range of solar costs for those running on-grid, off-grid, and hybrid systems for individuals installing it themselves costs 2-4 cents a KWhr. The higher end is the ability to operate your solar array when the utility grid goes down as your inverter has to perform the generation of the pure sine wave your home needs. In short, I find it unacceptable that a company providing power to my house can mandate I stay connected to the grid, pay fees, and restrict my solar installation of any size. It should be considered that for any strong arm move they make Florida residents will go so far as to refuse payment and live off-grid resulting in a large divide. I find utility companies charging 200-400% more than what a homeowner can produce with no expertise or scaling price reduction absurd.

I can provide a great deal of information to support all my statements and hope that you go so far as to enforce that Utility companies enter in a 25 year commitment with homeowners (standard solar warranty for many components) with net metering OR offer the ability to be off-grid and pay no fees to have the meter removed and service to be suspended.

Sincerely,
Gregory Behm

Dear Commissioner Julie Imanuel Brown,

We have less than 10 years before the world passes the tipping point on climate change. As we struggle with an historically active hurricane season (not to mention historic flooding from Sally and fires in the West), it is time to accelerate development of non-carbon energy sources, not to create more uncertainty by signaling changes in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. We are currently using solar panels on our home and will never see a payout in our lifetime as we are in our 70s and 80s. Deciding to "go solar" was done to help set an example for neighbors/communities to do the same in an effort to rollback the carbon footprint that we all are part of... We felt we, and others, need to take this pro-active stance in order to help preserve our air quality, reduce pollutants, and promote a healthier world for our children and grandchildren.

Please, do not make having solar panels to a punitive level. We all cannot afford that...as we live in a state the has an abundance of sunshine. Use it.

Sincerely,
Robert Kelly

Dear Commissioner Julie Imanuel Brown,

We should be pushing to promote renewable energy, not try to hinder it because of big oil conglomerates. If you're going to get rid of renewable incentives and net metering, they should also take away all subsidies on oil and gasoline.

If you wanna look at global warming, you'll know that most of florida will become to be underwater.

I'm a Hawaii resident who understands how expensive electricity is, and I am considering moving to FL so I can own a house of my own and put solar panels on it!

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Andrew Ligas

Dear Commissioner Julie Imanuel Brown,

I wholeheartedly object to limiting solar power net metering in order to increase profits. This is outrageous and limiting solar expand was rejected by Floridians in 2016! Clearly, citizens and customers want options that will help the earth. As a Florida native and taxpaying citizen, I believe we should embrace every opportunity to increase sustainable and renewable energy. By limiting the net metering rule, this will deter other homeowners from investing in this solar energy, thus increasing our reliance on fossil fuels. This is a detriment to not only Floridians, but the entire world as we are a heavily populated state and this will increase harmful emissions from energy production.

I ask you to please vote no!

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida. Thank you.

Dear Commissioner Julie Imanuel Brown,

As a Florida resident, the state should be enacting as many incentives as possible to capitalize on its abundant sunshine at the utility, business, and residential level. It is shocking to see so little residential solar voltaic installations. Net metering is a critical enabler. Residential solar already pay a monthly "grid connection fee.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Amy Niemann

I installed solar panels on my house last year and since that time my net usage has been negative. The surplus energy that I send back to FPL helps them power other homes without building more power plants, and the discount they receive by paying me at the COG rate is beneficial to them. The state of Florida should not go back on the net metering rule.

If solar energy were not such a good thing, FPL would not be putting up solar "power plants" across the state.

Sincerely,
Gregg Hoge

I have never received a rebate from FP&L for excess energy produced - I have ALWAYS had an electric bill even with solar panels on my roof. I pay my fair share to support the grid. Do not let the power companies convince you that we (the solar panel users) are not paying our fair share. My average power bill this summer was \$250 even with almost 8KW of solar panels on my roof. We need to preserve net metering to entice greater adoption of solar use in this state!

Dear Commissioner Julie Imanuel Brown,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Hugh McKay
