Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Philip Vatsvog

Dear Commissioner Andrew Giles Fay,

As a Florida resident, the state should be enacting as many incentives as possible to capitalize on its abundant sunshine at the utility, business, and residential level. It is shocking to see so little residential solar voltaic installations. Net metering is a critical enabler. Residential solar already pay a monthly "grid connection fee.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

Dear Commissioner Andrew Giles Fay,

Solar energy not only helps protect our beautiful planet but provides a lot of jobs for our communities. There is no reason for these multibillion dollar companies to be able monopolize how we get our energy. It's the way of the future and something everyone should have the right to do. On top of everything we are in a very serious pandemic and the burning of fuels doesn't help. The pandemic also has caused lots of families to lose their jobs or be significantly cut back and it's pathetic that these billionaires want to take away the opportunity for families to better themselves by saving a little money on their utilities. There are SO many reasons for solar to be available for people and only one reason that utilities don't want it to be, greed. I think that speaks for itself.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Richard Meurer

Dear Commissioner Andrew Giles Fay,

Commissioners-

We need MORE incentives for solar in Florida, and I am personally asking you to NOT allow the private utilities to pressure you with net metering rollback. This is not in the public interest.

So:

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

I wholeheartedly object to limiting solar power net metering in order to increase profits. This is outrageous and limiting solar expand was rejected by Floridians in 2016! Clearly, citizens and customers want options that will help the earth. As a Florida native and taxpaying citizen, I believe we should embrace every opportunity to increase sustainable and renewable energy. By limiting the net metering rule, this will deter other homeowners from investing in this solar energy, thus increasing our reliance on fossil fuels. This is a detriment to not only Floridians, but the entire world as we are a heavily populated state and this will increase harmful emissions from energy production.

I ask you to please vote no!

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida. Thank you.

Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

The Entire point of going Solar is clean energy, reduced pollution, and money saving. Big utilities take in billions yet their cost continue to rise each year while the consumer has no choice but to pay. Now we finally have a choice! Solar is our supplement! We are Americans and we should have the right to obtain and use our own natural energy for electricity in this safe and environmentally friendly way. We are simply selling back the energy we have made to the big utilities. Is capitalism only ok when they make money?

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Dear Commissioner Andrew Giles Fay,

Dear Commissioners,

In addition to the typical response below which I agree with, it is time that you allow millions of homeowners to be a part of, and benefit, of being able to use net metering. We all know the benefits of solar already, but this is about allowing people to participate in lowering their bills, helping the environment directly, and ultimately helping themselves to build wealth through solar savings. It is time that we allow the people, en masse, to benefit from net metering versus a few, already ultra-wealthy individuals. This just makes sense, and is good for the state ultimately. Please do not be swayed by the few rich and powerful influencers, but do what is right.

As an example of this - we just did our first net-zero home renovation, where solar on the home roof covers enough power for both the house and one electric car. The goal was to affordably do an entire net-zero renovation that is both below the national average home price and the local average price, and we can achieve that only with net metered solar.

Thank you for your time and critical attention to doing what's right, by the people.

- Erin Shine

The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Andy Oldham

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and that industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida, forever.

Sincerely,
Samuel Gabe

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Betty Arechederra

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida. And I depend on cost reductions for my net metering.

Sincerely,
Carl Kaiserman

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
EJ Hornick

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Brian Wilson

Dear Commissioner Andrew Giles Fay,

In my opinion efforts to roll back Florida's solar energy policy to increase profits for a few, at the expense of many, and the future and health of the planet is unconscionable. The voters of Florida saw through the shenanigans with the ambiguously worded Amendment 1 in 2016 and said no. This voter will be paying close attention to your actions today and in the future. Just do the right thing, put your efforts toward finding a win-win situation for utilities, shareholders, solar energy and our planet.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Ashley Harmon

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Avraam Christidis

The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Joe chiarelli

Dear Commissioner Andrew Giles Fay,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Subject: Please keep Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

Being the sunshine state, encouraging renewable energy investment, means supporting floridians purchase of solar panels. We should be able to put power on the grid and receive payment. A watt is a watt, doesn't matter who generates it.

Seems like people buying solar is good for the state for any number of reasons.

Why let an industry prevent advancement? Their profits should not be a factor.

Your careful consideration is appreciated.

Thanks,

Shawn

Subject: Net-Metering Works for Floridians

Dear Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

Conrad Roth

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,
Carmen Blakely

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Stephen Price
3245 Coldwell Dr Holiday, FL 34691-4838

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Teresa Diaz

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

As a Florida resident, Vietnam Veteran, and retiree on a fixed income, I decided some years ago to purchase my own solar P/V system to help stabilize my energy bill and to provide energy security during grid failures from natural or technological crisis.

I have invested \$70,000 in P/V panels and batteries to ensure my own "energy security", and to help my neighbors in times of grid failure. This system has significantly reduced my "carbon footprint" and reduced greenhouse gases - helping to preserve the biosphere. Net metering was one incentive that convinced me and others to make this personal investment in energy production & storage.

Each month I pay a "connection fee" amounting to \$127.56 annually as my fair share for helping Duke Energy maintain the grid.

Contrary to disinformation you have received from others, solar system users DO help support the grid; those costs are NOT passed on to non-solar customers.

Additionally, AT NO COST TO DUKE ENERGY, my "personal solar power plant" periodically sends excess power BACK to Duke - they did not spend a cent to produce that excess power AND they can send it on to others and CHARGE for it!

Net metering in Florida is a marginally-fair means for me to recoup a small fraction of my investment in building this solar system. It remains an important incentive for others to invest THEIR MONEY in creating a distributed power system that increases Duke's power production, resilience, and reliability - again, at little cost to Duke.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

I will be closely following your deliberations and trust that your decisions will support the benefits of solar energy for Duke Energy, consumers like me, and the future of Florida's economy and environment.

Best regards,

Sincerely,
Will Miller

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Mitchell Moremen

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Darshan Church

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

We should continue to listen to the people of Florida who voted in a 2016 to not restrict residential solar expansion. The private utility companies will always try to bribe certain people into believing that residential solar is a bad idea because their profits dwindle. However many independent studies have shown that residential solar is beneficial to cut down green house emissions and also accelerate the shift to sustainable energies. Florida just be the pioneer for residential solar in the country but has already fallen behind because of lack in state financial tax incentives. Taking away net metering would destroy any remaining chance for Florida to catch up with the rest of the country. I highly recommend not to support the notion to abandon net metering policy!

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
lynn snyder

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Jonathan Bear

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

I'm not going to paste in a bunch of pre-prepared statements from our solar advocacy organization, I'm writing my own here.

You know why I'm writing, I'm in support of solar and net metering.

Keep the clean energy jobs rolling.

Don't allow the big investor-owned utilities give you a snow-job during this pandemic, now is not the time.

Rooftop solar is contributing to the resiliency of our power grid, and helping us be more energy independent. We need as much renewables contributing to climate improvement as we can get right now.

Also, it doesn't make sense to repeal net metering in order for the investor-owned utilities to buy the excess power that I generate at wholesale rate, only to sell it to my neighbor at retail rate. I don't want the profit, I don't want a payout for excess, I just want to net out what I use at my home.

Public Service Commission, please represent the people, not the investor-owned utilities!

thank you!

Sincerely,

Dean Lester
