Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Donald Polmann,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Robert McDevitt

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid. All homeowners should have the ability to receive credit for the clean unused energy that their home solar systems generate. This is a win-win situation. This really is a Florida energy monopoly. By preventing homeowners from turning their homes to 100% solar, it limits a household's ability to reduce their carbon foot print and is NOT supportive of reversing climate change.

Please protect the opportunity for business and homeowners to generate clean solar power up to 100% and support local jobs by preserving our successful net metering rules here in Florida. Thank you!

Sincerely,
Sheryl Hilton

Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

The push for the reversal or amendment to current legislature by the utility provider speaks more to corporate greed and the immediate desire to pad one's pockets than it does to promote overall health and sustainability of the states citizens and renewable energy. The utility company should see a reduction in operating overhead as solar use grows. Less power plants would be needed, less fuel to run current plants, less maintenance costs, etc.. They seem to be worried about profit margin today rather than profit and sustainability into the future. Shortsightedness has got many a person in trouble and will continue to do so. We should be looking for new solutions to the energy/global warming crisis not trying to drag our old traditions and processes with us into the future.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald J. Polmann,

I represent 2000 Sierra Club members in Duval, Clay and St. Johns counties. We have advocated for the transition to clean renewable energy for years. We see net metering as an important factor in the equation influencing people to transition to solar. I myself, am looking at adding solar to our home.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Janet Stanko
