Subject: Protect net metering

Dear Commissioner Gary Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Regards,
Yvette Martinez

Dear Commissioner Gary Clark,

As we struggle with a global pandemic, an economic crisis, uncontrolled fires in the western part of our nation and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs. Lets lead by example, and .

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Josephine Mercado

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Gary Clark,

My company, develops, finances, owns and manages in North and South America with the majority of our projects being in the US. We are a solar company based in Florida that has neither developed, financed or even looked at a serious project in our own State of Florida. Florida is the laughing stock of the entire US solar industry because FPL and Duke essentially own the public utility commission in the State of FL.

Until Florida's PUC allows there to be competition for distributed generation of solar, and gets out from under the strangle hold that the IOU's have on you there will forever be an asterisk next to Florida as it relates to solar. You have allowed FPL & Duke to hold a monopoly on the state at the rate payers expense. Look at states like NJ, NY, ME, CA - the list goes on - and then look at Florida.

My advice to you is hold onto your day job at the FL PUC because when you leave your options will be severely limited for similar employment in other states that take solar competition seriously.

Kindest Personal Warmest Regards,

JTH

Dear Commissioner Gary Clark,

Solar energy not only helps protect our beautiful planet but provides a lot of jobs for our communities. There is no reason for these multibillion dollar companies to be able monopolize how we get our energy. It's the way of the future and something everyone should have the right to do. On top of everything we are in a very serious pandemic and the burning of fuels doesn't help. The pandemic also has caused lots of families to lose their jobs or be significantly cut back and it's pathetic that these billionaires want to take away the opportunity for families to better themselves by saving a little money on their utilities. There are SO many reasons for solar to be available for people and only one reason that utilities don't want it to be, greed. I think that speaks for itself.

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Gary Clark,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Jennifer Kraft

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Nickola Oram

Dear Commissioner Gary Clark,

No different than the utilities, I invested my hard earned capital in assets to generate a return. Now suddenly because the utility isn't making a big enough profit they feel they have the right to roll back a law passed by taxpayers and wipe out consumers investments. Consumers who invested have just as much right to a return on their capital as the utility does.

The commission could find itself defending an illegal taking lawsuit as changing the law could result in such action.

Instead the commission should look to the utility to promote and incent local generation which significantly reduces a utilities capital costs for transmission and generation.

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make Florida a leader in clean solar power and providing good paying local jobs.
