Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Chris Judkins
Safety Harbor, FL 34695

Dear Commissioner Chairman Art Graham,

We all know too well when the baby is hungry they cry. As it is with the utility companies in Florida or any other state in the Great USA. Yes they might be losing some money and Yes I understand where they are coming from however there needs to be a balance between big corp utilities and the public in general. My wages have been the same for the past 15 years as the price of all food goods to gas and utilities. There have always been this message from the electric company to conserve yet they always find a reason to raise the price. I don't want it in your state or mine let us oppose those that want to pressure us into higher prices which is not a benefit to We the People. As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Fraser Bolwell

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

I purchased solar last year with the expectation that net metering tiles would be around for some time. If they are not, my bill will go up and the numbers will not make sense for others to adopt solar for their homes.

Sincerely,
David Zorrilla

Subject: Make no change in Public/Regulatory Policy on Solar - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

I'll save you the long message. The people have already spoken - in 2016 - about utilities restricting access to (and the right of the public to seek the benefits of) solar, striking down amendment 1 by voting no on the ballot.

Public sentiment has not changed. Net metering is still supported. There is not a legitimate compelling reason to change policy on solar energy - other than the utilities being placed in a more advantageous position to make more money. It doesn't seem that any of the electric utilities are lacking in the profit department - so why hurt the public?

I ask that you not change public regulatory policy on solar or on the availability of net metering.

Sincerely,
Chris Saribay
