Dear FL PSC Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, solar installer was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools, not less, in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and Florida residents from additional uncertainty by preserving net metering here in Florida

Sincerely,

N Pfuetze

Dear FL PSC Commissioners,

The existing solar net metering policy is FAIR in every respect! To roll it back would discourage continued growth of rooftop solar installations, which is, of course, the point of the renewed pressure on the PSC by those representing the interest of the major utilities to roll it back. This is particularly egregious in the middle of a pandemic which has caused soaring unemployment in Florida. And it goes without saying that the optics of acceding to the pressure to roll back solar net metering in the face of obvious examples of our ongoing climate crisis are simply terrible. Please leave the current solar net metering policy in place.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people.
