Subject: Protect net metering

Dear Commissioner Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Regards,
Yvette Martinez

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Rodrigo Rios

Dear Chairman Art Graham,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Loren Wieland

Dear Chairman Art Graham,

Here are my thoughts to add to the comments below:

Florida is in a unique position to benefit from solar power since we enjoy so much sunny weather - and Florida also has steeply increasing electricity needs due to the influx of population and industry to our state, as well as increased popularity of electric cars.

Rooftop solar panels, photovoltaic glass in windows, skylights and footpaths, and any other new technologies that produce electricity from solar power should be required in all new buildings (both commercial and residential) and older buildings should be transitioned to solar with incentives such as tax credits and subsidies.

It's confusing to me that Florida isn't already a leader in developing universal solar power - but now there's no excuse. The cost of photovoltaics as well as storage batteries has come down; the appearance is much more acceptable (solar roof shingles that are indistinguishable from conventional roofing), etc.

IF all buildings were converted to rooftop solar, there would not be the need to create "solar farms" on wild land -- and we need to preserve our wild lands and continue restoring them, especially the Everglades and the areas from Orlando and Lake Okeechobee south that feed the Everglades. Human life cannot continue without wildlife, all the way from insects that pollenate our food crops to scavengers who feed on what otherwise would rot all around us, to the plants that feed wildlife and filter water that becomes our clean drinking water, to the trees and grasslands that take carbon out of the air and produce the oxygen we need to breathe.

Over the last century, the electric utilities have profited abundantly from providing power which has become a necessity and not a luxury. And, in recent decades, for-profit entities have become degraded by the race for profits, at the expense of their workers, communities and environment, and producing the current extremes of wealth inequality.

Encouraging roof top solar power and energy self-sufficiency is a matter of national security and community security in many ways.

First of all, power outages, disrupting the electric grid remain a target of the US's enemies and rogue terrorists - not to mention hurricanes, natural disasters, heat waves. Having roof top solar assures homeowners, businesses and essential services like hospitals, TV/radio broadcasters, fire stations and police that their power will not go out, AND allows for the excess generated to go to the utilities relieving the excess need.

Secondly, civil unrest over financial crisis is now a real threat. Allowing for energy self sufficiency allows peace of mind for all of us.

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Dear Chairman Art Graham,

Florida should be a leader in expanding solar energy. I am a voting citizen of this state. As such, I have the right to generate solar energy on my property and offer any excess energy to go back on the power grid. I am opposed to electric utility companies and organizations dictating what I can and cannot do. The United States was founded on the principle of freedom and individual rights to all citizens. It was not founded to pander to corporations. You can check that out by reading history books.

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

I am a lifelong Florida resident of 60 years. We hope to install solar panels on our roof in the near future and we are strongly in favor of the current solar policies that help citizens. I urge the Commission to resist the power companies pressure to change policies to benefit the companies and their stockholders. Protect the citizens rights to solar energy benefits! Please!

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Penny Birch-Williams

Dear Chairman Art Graham,

I would like to voice my opposition to any changes to the current net metering policy in place in Florida. I have invested in a rooftop solar array to power my home under the premise that I will be reimbursed for the electricity I send back to the grid at a set rate. As you are likely aware, this initial investment is expensive and any change to the net metering policy that eliminates or reduces the return on that investment would be financially devastating. I urge you to consider this issue with fairness in mind. Please do not allow the utility companies to pull the rug out from under us.

Thank you for your thoughtful consideration.

Sincerely,

As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

My husband and I attended a meeting about a solar cooperative in our county. The only reason I wasn't interested in joining is that I learned that, if we had solar panels, we could not use that power our panels generated and a storage battery to maintain electricity during an outage.

But I believe strongly in solar -- in getting off of nonrenewable forms of energy.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Dear Chairman Art Graham,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets. I am earlier adopter of solar for my home--over 8 years-- and am very happy with the results on my utility bills. It has saved me quite a bit of money and also am very pleased to do my part to reduce oil and gas consumption.

m
Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Luis Fresquez

Dear Chairman Art Graham,

Dear Commissioners.

I have supported renewable energy since I was 16 years old and now I am 46, that is, for 40 years. About 3 years ago we put up panels at home, to our surprise not only did the cost of electricity increase, but we also increased property taxes. If that is an incentive? We are doomed. The program in my opinion is a scam and I would not recommend it to anyone. I call the company and they tell me it is the fault of FPL I call FPL and they tell me it is the fault of the company. It's a mafia

As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

What I do want to see is better regulations as I was taken by the Solar Seller and now can not get service on a product that I purchased on a 20 year loan on. These solar programs are great and all but please regulate this industry so people like me do not get cheated. I was lied to about the type of inverters they were installing and about the size of the system and the only option I have which is tough to do in this Covid situation is to sue the company.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Shawn Shimko

Subject: [NARUC-WAP-SF] Bipartisan - Negotiated Continuing Resolution (to fund government past Sept 30) Passes House this morning - Expect Senate to take it up Next Week and President to sign.
Attachments: ATT00001.txt

EARLIER THIS MORNING – DEAL STRUCK:

This morning - the House passed 359-57, a stopgap funding measure needed to avert a partial government shutdown in eight days. Senate-House leaders reached a deal last night resolving a fight over farm payments requested by the President.

The CR extends current funding for all federal agencies through DECEMBER 11. The revised stopgap measure also includes numerous reauthorizations for programs that would otherwise lapse at the end of September, such as the National Flood Insurance Program and surface transportation/Hwy spending. It does include an additional \$13.6 billion for highways and mass transit, and another \$14 billion for aviation programs.

The CR is expected to clear the Senate by early next week and since it includes the farm payments requested by the President – he is expected to sign it.

Lame Duck? Best guess – in lame duck maybe the defense approps passes – but probably a CR on the rest of the approps measure carrying them into next year.

Dear Chairman Art Graham,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
joe pasak
