Dear Chairman Art Graham,

I have had solar electric panels on my roof since 2012. Changes to net metering would have a devastating impact on our economy at a time when we can least afford it. Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets. Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country. Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

The climate crisis is making hurricanes more frequent and stronger. Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
David Reeves
Bonita Springs, FL 34135

Dear Chairman Art Graham,

The Solar industry in Florida has one of the greatest potentials of many states. Many of us have done the right thing and installed solar panels. The state enjoys cleaner air because of it. Many people have jobs because of the popularity of solar.

If the utility companies are allowed to do away with net metering solar system sales will plummet and many people will lose their jobs. Also, the loss of net metering will have a detrimental financial impact on homeowners who were responsible and invested several thousand dollars for solar systems.

The greed and monopoly style policies of the utility companies must stop.

Please defend solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Cynthia Houk

Dear Chairman Art Graham,

Net metering must be allowed to continue as it is at present. Solar is the way to go in order to cut down on demand on nuclear power generation (which requires many metric tons of fresh water daily in addition to producing radioactive by-products). The ability to produce power from the sun, through my own investment in a 24kWh system, and feed unused power back to the grid, is crucial to the economic viability of any solar system. Until battery storage technology becomes much less expensive, feeding power back to the grid and getting a credit through net metering is the only way to go.

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. Dear Chairman Art Graham,

The Lowdown? We Solar installed residents COUNTED ON the long term plan for payback through the Solar Utility payback system ...as it is, the utilities only give .04 cents per KWH and then they sell it for over 12 cents. We should, in fact, be getting even more like .07 cents. That's fair, we make half, and they make half. We take all the risks with leaky roofs that WE pay for. And to think the Utilities want to destroy our contract with them and the Solar Companies ...that we would buy in ..in exchange for the credit. That would violate and impair our Constitutional right to contract. Don't take it away dear Commissioners because then we'll come after you and sue you. And we'll win.

In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Emidio DAmato JR

Dear Chairman Art Graham,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies.
