Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald J. Polmann,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Doug Helliesen

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald J. Polmann,

I became involved in the solar industry back in 1985 while working for Blount International on the SEGs projects at Kramer Junction in California. As the Project Administrator for SEGs III-VII at Kramer Junction and Project Engineering Manager for SEGs VIII and IX at Harper Dry Lake, I came to learn the relentless and often vicious resistance on the part of traditional energy companies to the introduction of alternative energy production. It is astonishing to me that the resistance has not abated and that regulatory agencies are seemingly powerless to affect a change.

Reliance on carbon fuels is not sustainable from both an availability or and environmental perspective. Florida PSC has an obligation to the taxpayers that want to participate in a solution to do just that. While it is unlikely that most homeowners will be completely self-sufficient, or that net-metering will ever put the energy companies at the mercy of homeowner-producers, we must do everything we can to make certain that solar is available and affordable for any homeowner that wants to take the responsibility and financial burden.

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. Dear Commissioner Donald J. Polmann,

This is to request that your organization publish a history of "Cost of Generation" rates (COG-1) for all Florida Utilities from 2018 to the present. This would be very helpful to existing and future solar system owners. Finding information about COG-1 net metering rates is like looking for a needle in a haystack.

In 2019 energysage.com published an internet document that indicated that the COG-1 tariff rate for Duke Energy Florida was 6.310 cents/kWh.

On April 25, 2018 my 8,400 watt solar system was installed and operational. At the end of 2018, my solar system produced an annual excess energy of 1,051 kWh for which I received only a credit of \$34.32, at a COG-1 rate of 3.26546 cents/kWh.

At the end of 2019 my solar system produced an annual excess energy of 4,172 kWh for which I received only a credit of \$105.30, at a COG-1 rate of 2.52397 cents/kWh.

A recent Duke Energy publication entitled "Rates effective with June 2020 bills" indicates an Energy charge for the first 1,000 kWh of 8.290 cents per kWh and a Fuel charge for the first 1,000 kWh of 3.067 cents per kWh.

I wonder how my 2019 reimbursement cost, the Cost of Generation (COG-1), could be only 2.52397 cents per kWh when the fuel charge alone is 3.067 cents per kWh.

A table showing the historical COG-1 rates from 2018 to the present for all Florida utilities would be very helpful to compare COG-1 rates between all Florida utilities.

Thank you for providing this information for existing and future solar system owners.

I believe that I had a part in starting Net Metering. In the 2002/03 school year, I planned to install PV on Westside Tech. I contacted, then Progress Energy, and they said if I did, they would charge me another \$79 a month to read a second meter showing the electricity that we produced. I contacted the Commissioners and suggested net metering. It happened!

I sent my Electrical Instructor to FSEC for a week of training, and when he returned, we taught the students how to install the systems. We went on to install systems at Ocoee Elementary School and Ocoee Middle School. There is never enough money for education, but if we can use the sun to lower utility bills, then more money can be used for educating students.

Dear Commissioner Donald J. Polmann,

Please protect the "solar rights" of Florida's citizens by retaining net metering and supporting policies that make solar energy available at a reasonable investment to all Floridians.

Please work to reduce the monopoly that large utilities have on our energy supply.

Citizen-owned solar energy is good for the state. Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Nancy Strong

Dear Commissioner Donald J. Polmann,

Four years ago, I joined the West Orange County solar co-op to investigate using solar power as my primary energy source. My solar system allowed 6+ folks to work full-time jobs for 3 days just during installation. I'm guessing it took 1-2 more days for admin and support services.

For the last 3+ years, I have been producing solar. Duke energy has programs available for non-solar users to cut power during extreme heat periods. These programs are designed so that they do not have to stress their grid or to build extra plants to support just the peak needs. Very expensive alternatives to shareholders. These extreme heat periods are exactly the times that I'm producing solar and saving the Duke energy grid and the shareholders.

Those of us that use our own capital to build solar are actually benefitting not just our own wallets but the fortunes of Duke and the shareholders. Lowering the peak needs, taking stress off of the grid, delaying the need to build additional power plants, providing solar install and maintenance jobs. This is a win, win, win for the Duke Company, my own wallet, my neighbors and the climate. Please support the increasing use of homeowner-capitalized solar.

Sincerely,
greg gensheimer

In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Brandon Slisz

Dear Commissioner Donald J. Polmann,

I am surprised the power industries in Florida are not getting more involved in solar. Solar farms are not the only answer. Rooftop units serve multiple purposes without taking up valuable real estate. Why aren't power companies in Florida getting into the business of home and business solar plants. If they support and provided enough residential and business units, they might very well be able to avoid or postpone building larger and new plants. They have buying power as well as expertise in the business of power production. It would seem a logical expansion of their business and a great way of slowing converting to a renewable energy sources.

Are there rules that prohibit this business model by the power industries in Florida?

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
David Wing

Dear Commissioner Donald J. Polmann,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald J. Polmann,

Since November of 2018 our family has been reducing the burden on our electric utility by adding solar to our homes. We're also providing a cleaner source of energy to ensure future generations inherit a better planet.

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Esver Camacho

Dear Commissioner Donald J. Polmann,

Everyone says we need to do more for the environment so I did. I bought 32 panels and a Tesla battery to power my home.

What makes you think it is fair for the power company to charge one price for a kilowatt you use but charge a different price for the kilowatt sent to them. ITS NOT. They can pay what they charge period. Just like I have to have additional insurance because my system is so big. And you want to take away net metering.

Tell you what take net metering away I drop the insurance I'm suppose to carry how about that for trade if not then shut up and leave it alone.

Sincerely,

Dear Commissioner Donald J. Polmann,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

My wife and I have a small business that we could power with solar electricity, but only if we knew that existing solar policies surrounding net metering were not going to change. We would not hire workers to install a solar system if we feared the cost structure would be changing. It would not be good business. Please give us the assurance that existing solar policies are not going to change on a whim because of lobbying by a utility.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way. And in our case, get business running soon! (We make cleaning supplies in demand after a disaster.)

Thank you for defending solar workers, business owners such as myself, and residents by protecting our bedrock solar policies here in Florida.

Dear Commissioner Donald J. Polmann,

As a soon to be solar homeowners and solar educator, i see everyday how much distributed solar generation benefits our communities. Not just me the solar owner, but my neighbors, the region, the economy. Distributed solar has barely made a speck of penetration in the power grid. And until exponentially more people own rooftop solar, our panels are a NET GAIN to the grid.

Beyond the rarely spoken value of solar's offset to pollution and security, it is providing a local sourced and abundant fuel to the generation mix, at local levels, without the utilities moving it around with all the associated losses.

Net metering is the economic function that makes it all work. Well. For Floridians. Disturbing net metering is harmful and would severely impact an industry that can't be exported and improves bottom line and health measures.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald J. Polmann,

would like u to address fact that oncall demand reduction program does not allow customers with less than 1000 kwh per month consumption to receive

before solar i got these
after solar none

my consumption and use on site did not change

when they activate my devices still turn off and they save still

this restriction was written before solar and needs to b modified

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Drew Gillett
