Dear Commissioner Gary F. Clark,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

Before COVID-19, "solar installer" was the fastest growing job in the country, and the solar industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. In the Sunshine state, before this crisis began, the solar industry employed over 12,000 Floridians. Now, over 1 million Floridians are unemployed, and Florida has already lost 22% of its workforce.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Thank you for defending solar workers, business owners, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Thomas Montgomery

Dear Commissioner Gary F. Clark,

Amid a public health and economic crisis, it's clear that Florida's electric utilities should be doing a whole lot more to promote rooftop solar - a known job creator that keeps money in families' pockets.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

My wife and I have a small business that we could power with solar electricity, but only if we knew that existing solar policies surrounding net metering were not going to change. We would not hire workers to install a solar system if we feared the cost structure would be changing. It would not be good business. Please give us the assurance that existing solar policies are not going to change on a whim because of lobbying by a utility.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. As we face another intense hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way. And in our case, get business running soon! (We make cleaning supplies in demand after a disaster.)

Thank you for defending solar workers, business owners such as myself, and residents by protecting our bedrock solar policies here in Florida.

Sincerely,
Dr. Terdal (Ph.D.)

Sincerely,
Erik Terdal

Dear Commissioner Gary F. Clark,

As a soon to be solar homeowners and solar educator, i see everyday how much distributed solar generation benefits our communities. Not just me the solar owner, but my neighbors, the region, the economy. Distributed solar has barely made a speck of penetration in the power grid. And until exponentially more people own rooftop solar, our panels are a NET GAIN to the grid.

Beyond the rarely spoken value of solar's offset to pollution and security, it is providing a local sourced and abundant fuel to the generation mix, at local levels, without the utilities moving it around with all the associated losses.

Net metering is the economic function that makes it all work. Well. For Floridians. Disturbing net metering is harmful and would severely impact an industry that can't be exported and improves bottom line and health measures.

People and businesses across the state rely on common sense solar policies to take control of their own energy, save money, and choose how they power their lives.

Not only does solar create jobs and save us money, but when paired with batteries, solar panels can contribute to the resilience of the electric grid and provide back-up power in emergencies. Dear Commissioner Gary F. Clark,

would like u to address fact that oncall demand reduction program does not allow customers with less than 1000 kwh per month consumption to receive

before solar i got these
after solar none

my consumption and use on site did not change

when they activate my devices still turn off and they save still

this restriction was written before solar and needs to b modified
