P R O C E E D I N G S

(Transcript follows in sequence from  
Volume 1.)  
(Whereupon, prefiled direct testimony of Sean  
P. Hillary was inserted.)

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                                   **PREPARED DIRECT TESTIMONY**

3   **OF**

4   **SEAN P. HILLARY**

5  
6                   **POSITION, QUALIFICATION, AND PURPOSE**

7           **Q.**    Please state your name, address, occupation and employer.

8  
9           **A.**    My name is Sean P. Hillary. My business address is 702 North  
10           Franklin Street, Tampa, Florida 33602. I am employed as the  
11           Controller of Peoples Gas System ("Peoples" or "the  
12           Company"), a division of Tampa Electric Company ("Tampa  
13           Electric").

14  
15           **Q.**    Please describe your duties and responsibilities in that  
16           position.

17  
18           **A.**    I am responsible for maintaining the financial books and  
19           records of the Company and for the determination and  
20           implementation of accounting policies and practices for  
21           Peoples. I am also responsible for budgeting and forecasting  
22           activities within the Company. I am responsible for all  
23           external financial reporting aspects for the Company  
24           including quarterly surveillance reports filed with the  
25           Commission.

1 Q. Please provide a brief outline of your educational background  
2 and business experience.

3

4 A. I graduated from the University of South Florida in 1993 with  
5 a Bachelor of Accounting degree and in 1995 with a Master of  
6 Accountancy degree. Prior to joining TECO Energy, I worked  
7 for Arthur Andersen & Co. and Florida Power Corporation. At  
8 Florida Power Corporation, I worked as an internal auditor  
9 and financial analyst. In June 2000, I joined TECO Energy  
10 and have held various roles with increasing responsibility  
11 including the Director, Business Planning for Tampa Electric  
12 and Peoples and the Director, Corporate Financial Reporting  
13 for TECO Energy. I am a Certified Public Accountant in the  
14 State of Florida, and I have served in my current position as  
15 Controller of Peoples since May 2018.

16

17 Q. Have you previously filed testimony before the Florida Public  
18 Service Commission ("Commission")?

19

20 A. Yes. I have previously filed testimony before this Commission  
21 in Peoples' Petition for Recovery of Costs Associated with  
22 Hurricane Michael in Docket No. 20190109-GU.

23

24 Q. Did you prepare any exhibits in support of your prepared  
25 direct testimony?

1 **A.** Yes. Exhibit No. (SPH-1) was prepared under my direction and  
2 supervision. My Exhibit consists of 7 Documents, entitled:

3

4	Document No. 1	List of MFR Schedules Sponsored or Co-
5		Sponsored
6	Document No. 2	Operations & Maintenance Expense Summary
7	Document No. 3	Storm Reserve Analysis
8	Document No. 4	Manufactured Gas Plant Regulatory Asset
9		Amortization
10	Document No. 5	Summary of Other Non-Trended O&M by FERC
11		Account
12	Document No. 6	2020 and 2021 Capital Budget
13	Document No. 7	2021 Test Year Reconciliation of Capital
14		Structure to Rate Base

15

16 The information in the MFR schedules listed in my exhibit are  
17 based on the business records of the Company maintained in  
18 the ordinary course of business and are true and correct to  
19 the best of my information and belief.

20

21 **Q.** What are the purposes of your prepared direct testimony in  
22 this proceeding?

23

24 **A.** The purposes of my prepared direct testimony are to present:  
25 (i) support for the Company's decision to use a projected

1 2021 test year for ratemaking purposes; (ii) the  
2 determination of the Company's proposed annual revenue  
3 requirement; (iii) the proposed ratemaking treatment for the  
4 Company's Cast Iron Bare Steel Rider investments; (iv) the  
5 budget process used to develop these financial projections  
6 for the test year; (v) the determination of test year net  
7 operating income; (vi) the drivers of test year operations  
8 and maintenance expense; (vii) the determination of rate base  
9 for the test year; and (viii) an explanation of how the  
10 Company arrived at its proposed capital structure and cost-  
11 of-capital for the projected test year.

12  
13 These and other matters are covered - at least in part - by  
14 schedules included in the Minimum Filing Requirements  
15 ("MFRs") required by Rule 25-7.039, Florida Administrative  
16 Code ("F.A.C."). I am sponsoring much of the financial  
17 information provided in the MFR Schedules A, B, C, D, E, G,  
18 and I as indicated in Document No. 1 of my exhibit.

19  
20 **PROJECTED TEST YEAR**

21 **Q.** What test year does the Company propose to use in this  
22 proceeding?

23  
24 **A.** In accordance with Rule 25-7.140, F.A.C., Test Year  
25 Notification, Peoples notified the Commission on February 7,

1 2020, it has selected the twelve-month period ending December  
2 31, 2021, as the projected test year for Peoples' petition to  
3 modify its rates and charges. Calendar year 2021 is  
4 appropriate for use as the test year since it is  
5 representative of Peoples' projected revenues and projected  
6 cost of service, capital structure and rate base required to  
7 provide safe, reliable, cost-effective service to its  
8 customers during the period when the Company's new rates will  
9 be in effect.

10  
11 **Q.** When is the Company requesting new base rates to be in effect?

12  
13 **A.** Peoples requests its proposed base rates become effective  
14 January 1, 2021.

15  
16 **Q.** With 2021 being the projected test year, what is the historic  
17 base year in this proceeding?

18  
19 **A.** The historic base year is the 12-months ended December 31,  
20 2019. All data related to this historical base year is  
21 historical data taken from the books and records of the  
22 Company, which are kept in the regular course of the Company's  
23 business in accordance with Generally Accepted Accounting  
24 Principles ("GAAP") and provisions of the Federal Energy  
25 Regulatory Commission ("FERC") Uniform System of Accounts

1           prescribed by the Commission.

2  
3   **REVENUE REQUIREMENT**

4   **Q.**   What is the base revenue increase requested by Peoples?

5  
6   **A.**   Using the projected test year ending December 31, 2021, the  
7           Company seeks a permanent base revenue increase of \$61.7  
8           million.   Additionally, the Company is seeking to move  
9           approximately \$23.6 million into base revenue associated with  
10          moving its Cast Iron / Bare Steel Rider ("CI/BSR") investments  
11          into rate base and resetting the CI/BSR surcharge, as  
12          contemplated by Commission Order No. PSC-2012-0476-TRF-GU,  
13          issued on September 18, 2012.   This increase is necessary to  
14          allow Peoples to (i) continue to provide safe and reliable  
15          natural gas service at customer service levels the Company's  
16          customers expect; (ii) maintain the Company's financial  
17          integrity and access to low cost debt while funding the  
18          Company's future capital expenditures; and (iii) have the  
19          opportunity to earn a fair return on its investment.   The  
20          revenue increase is based on the Company maintaining its  
21          midpoint return on equity of 10.75 percent, with an overall  
22          return of 6.63 percent on its 2021 average rate base of  
23          approximately \$1,578.7 million.

24  
25   **Q.**   Why is Peoples seeking rate relief at this time?

1 **A.** It has been approximately twelve years since Peoples last  
2 requested a base rate increase. During that time, Peoples  
3 agreed to reduce its base rates by approximately five percent  
4 as a result of federal tax reform. By 2021, the Company's  
5 existing base rates will not provide sufficient revenues to  
6 allow the Company to safely and reliably serve its customers  
7 while allowing for the opportunity to earn a fair return on  
8 the Company's investment.

9

10 **Q.** What was Peoples' return on equity ("ROE") for 2019 and what  
11 is the projected ROE for 2020?

12

13 **A.** The December 2019 Surveillance Report ROE was 10.00 percent.  
14 The projected ROE in the 2020 Forecasted Surveillance Report  
15 was 7.51 percent.

16

17 **Q.** What is Peoples' projected ROE in the 2021 test year?

18

19 **A.** Without rate relief and including the impact of moving the  
20 CI/BSR investments into rate base in 2021, the Company  
21 projects a ROE of 2.01 percent. Under the scenario of Peoples  
22 not filing for rate relief and the CI/BSR staying in place in  
23 2021, the Company projects a ROE of 3.35 percent. These are  
24 far below both the Commission's approved 10.75 percent  
25 midpoint ROE from the last base rate proceeding and the

1 Company's proposed 10.75 percent ROE for this proceeding, as  
2 supported in the direct testimony of expert witness Robert B.  
3 Hevert.

4  
5 **Q.** Can you explain the calculation for determining the December  
6 31, 2021, projected test year revenue requirement?

7  
8 **A.** Yes. The derivation of the Company's projected revenue  
9 deficiency is summarized in MFR Schedule G-5. The 2021  
10 revenue deficiency is determined by multiplying the projected  
11 test year rate base by the proposed overall rate of return to  
12 arrive at the net operating income ("NOI") required. The  
13 difference between the required NOI and the forecasted  
14 projected test year NOI results in the NOI deficiency. The  
15 NOI deficiency is then multiplied by the NOI Multiplier, which  
16 accounts for income tax gross ups, bad debt expense, and  
17 regulatory assessment fees, to determine the forecasted base  
18 revenue deficiency.

19  
20 **Q.** What is the NOI Multiplier being used to determine the revenue  
21 deficiency?

22  
23 **A.** The NOI Multiplier proposed in this case is 1.3361 as shown  
24 on MFR Schedule G-4. The NOI Multiplier reflects the  
25 corporate federal income tax rate of 21.0 percent in

1 accordance with the Tax Cuts and Jobs Act of 2017 ("TCJA")  
2 and the 2021 temporary state of Florida corporate tax rate of  
3 4.458 percent. In addition, the NOI Multiplier incorporates  
4 the bad debt rate of 0.3423 percent and the regulatory  
5 assessment fee rate of 0.5 percent.

6  
7 **Q.** Please explain why the state of Florida corporate tax rate is  
8 temporary.

9  
10 **A.** As further discussed in the direct testimony of Company  
11 witness Valerie Strickland, on September 12, 2019, the state  
12 of Florida issued a corporate tax rate reduction from 5.5  
13 percent to 4.458 percent effective January 1, 2019 through  
14 December 31, 2021. On January 1, 2022, the rate will return  
15 to 5.5 percent.

16  
17 **CAST IRON / BARE STEEL RIDER TREATMENT**

18 **Q.** Please explain how the Company proposes to address its CI/BSR  
19 in this rate case proceeding.

20  
21 **A.** Commission Order No. PSC-2012-0476-TRF-GU ("Order")  
22 established the program for accelerating replacement of cast  
23 iron bare steel pipe due to safety concerns. In the Order it  
24 was contemplated that when Peoples filed its next rate case,  
25 the replaced infrastructure recovered through the CI/BSR

1 would be rolled into Peoples' overall rate base and the  
2 surcharge would be "reset to zero". To accomplish that in  
3 this base rate proceeding, the Company has included in rate  
4 base the gross plant, accumulated depreciation and  
5 construction work in progress related to the cumulative  
6 CI/BSR eligible investments made through December 31, 2020.  
7 The net book value of the CI/BSR assets on December 31, 2020  
8 is budgeted to be approximately \$200.7 million. In addition,  
9 beginning January 1, 2021, the Company has reflected the  
10 related depreciation expense and increasing accumulated  
11 depreciation, property tax expense and return on the rate  
12 base in the calculation of the 2021 revenue requirement.

13  
14 Although the CI/BSR will be reset to zero and adjusted for  
15 any true-up amounts from 2020 on January 1, 2021 in this base  
16 rate proceeding, the CI/BSR program will continue until all  
17 eligible infrastructure replacements have been made, which  
18 was also contemplated in the Order. Therefore, eligible pipe  
19 replacement investments budgeted for 2021 and their related  
20 costs have been reflected as recoverable through the reset  
21 CI/BSR in 2021. Consistent with the terms of the Order, the  
22 Company has excluded the first \$1.0 million of capital  
23 expenditures for replacements in 2021 from recovery through  
24 the CI/BSR surcharge. Therefore, the first \$1.0 million has  
25 been included in rate base.

1 **Q.** How does the Company propose to handle any over or under-  
2 recovery of the 2020 CI/BSR related revenue requirements?

3  
4 **A.** Consistent with the process approved in the original Order,  
5 the Company proposes any over or under-recovery of 2020 CI/BSR  
6 revenue requirements be subject to the normal true-up process  
7 in 2021.

8  
9 **Q.** What is the impact on the Company's requested revenue  
10 requirement from rolling the CI/BSR investments into rate  
11 base?

12  
13 **A.** Incorporating the revenue requirement related to the \$200.7  
14 million net book value of the CI/BSR assets as of December  
15 31, 2020 has an approximate \$23.6 million impact on the  
16 Company's request, resulting in a total requested base rate  
17 revenue increase of \$85.3 million. I note, however, that the  
18 \$23.6 million associated with CI/BSR should not be considered  
19 new revenue to the Company, as this is actually revenue that  
20 the Company already receives through the CI/BSR surcharge.  
21 The incorporation of the CI/BSR revenue requirement for the  
22 Company's rate request simply reflects a revenue neutral  
23 transfer of the CI/BSR investments made through December 31,  
24 2020, into rate base and resetting the rider to zero asset  
25 net book value as of January 1, 2021. Thus, while the

1 transfer of the CI/BSR investments to rate base has a \$23.6  
2 million impact on Peoples' requested revenue requirement, the  
3 impact on actual company revenue, and its customers' bills,  
4 is completely neutral.

5  
6 **Q.** How did the Company determine that impact to the revenue  
7 requirement related to moving the CI/BSR investments into  
8 rate base was \$23.6 million?

9  
10 **A.** The Company determined the CI/BSR related impact to 2021  
11 revenue requirement by employing the normal annual  
12 calculations used to set the annual CI/BSR surcharge.  
13 Pursuant to the Order, the CI/BSR revenue requirement  
14 includes the associated depreciation expense, property tax  
15 expense and return on the investment. The surcharge  
16 calculation was first calculated assuming the CI/BSR was not  
17 reset to zero January 1, 2021. Then the surcharge calculation  
18 was redone assuming a reset to zero as of January 1, 2021,  
19 with only the eligible 2021 infrastructure replacement  
20 investments and their associated costs included in the 2021  
21 CI/BSR surcharge. The difference between the two  
22 calculations is the \$23.6 million.

23  
24 **BUDGET PROCESS**

25 **Q.** How did the Company prepare the 2021 projected test year

1 financial data?

2

3 **A.** Peoples' 2021 projected test year was developed using the  
4 same process used to develop the Company's annual budgets,  
5 including capital expenditure and income statement forecasts.  
6 The generation of the budget is an integrated process that  
7 results in a complete set of budgeted financial statements,  
8 including income statement, balance sheet and statement of  
9 cash flows. The balance sheet is budgeted by starting with  
10 the December 31, 2019, actual balances. Balance sheet  
11 accounts are then budgeted by either forecasting monthly  
12 balances based on past trends or using the forecasted monthly  
13 income statement activity, depending on the type of account.  
14 Once the balance sheet and income statement have been  
15 constructed, a statement of cash flows is generated. This  
16 statement determines the Company's capital structure funding  
17 by showing its needs from short-term debt draws, long term  
18 bond issuances and equity infusions. The Company's ability  
19 to manage its costs through its diligent and thorough annual  
20 budgeting process has been a contributing factor in avoiding  
21 a base rate increase for the last 12 years.

22

23 **Q.** What are the major components of the projected 2021 budgeted  
24 balance sheet?

25

1 **A.** The largest component of the 2021 budgeted balance sheet is  
2 the net utility plant. Net plant balances reflect the capital  
3 expenditures for property, plant and equipment already  
4 invested as well as the capital expenditures included in the  
5 2020 and 2021 capital budget. The other major components  
6 of the balance sheet and rate base are the accumulated  
7 provision for depreciation of plant-in-service and the  
8 accounts that make up the allowance for working capital.

9

10 **Q.** What are the major components of the projected 2021 budgeted  
11 income statement?

12

13 **A.** The major components of the income statement include  
14 revenues, operations and maintenance ("O&M") expense, and  
15 depreciation expense. The 2021 revenues are supported by  
16 Company witness Lorraine L. Cifuentes. My direct testimony  
17 will support the Company's 2021 operating expenses.

18

19 **Q.** How was the 2021 budgeted income statement developed?

20

21 **A.** The 2021 budgeted income statement was prepared by Peoples'  
22 Finance department under my direction and supervision. The  
23 Finance department assembled forecasted data prepared by  
24 numerous employees who specialize in different areas of the  
25 Company's operations. The same accounting principles,

1 methods and practices which the Company employs for  
2 historical data were applied to the forecasted data to arrive  
3 at the budgeted income statement.

4  
5 The income statement is developed using all forecasted  
6 revenues and other types of income, largely base revenues and  
7 the revenues from the cost recovery clauses and CI/BSR. The  
8 income statement also contains projections for off-system  
9 sales and other operating revenues such as miscellaneous  
10 service revenues. To complete the income statement, all  
11 operating expenses are accumulated including O&M expense,  
12 depreciation expense and property taxes. Interest expense and  
13 interest income, as well as all below-the-line items are also  
14 considered. Once all pre-tax components are determined,  
15 income taxes are calculated to determine final net income.

16  
17 As further described later in my prepared direct testimony,  
18 Peoples' President and the senior management team performed  
19 a detailed review of the proposed 2021 O&M expense budget for  
20 alignment with Company objectives and strategic initiatives  
21 prior to finalizing the Company's 2021 income statement  
22 budget. The Company's Board of Directors then approved  
23 Peoples 2021 income statement budget on March 16, 2020.

24  
25 **Q.** Please discuss the Company's process for determining the 2021

1 budgeted revenues.

2  
3 **A.** The Company's Load Research and Forecasting group produces  
4 the residential and small commercial customer counts and  
5 therm-usage projections. Company witness Cifuentes is  
6 responsible for this function and discusses key assumptions  
7 used to develop the forecasts in more detail in her direct  
8 testimony. As discussed in Company witness Cifuentes' direct  
9 testimony, the Business Development and Accounting  
10 Departments collectively prepare the large commercial and  
11 industrial revenue forecast at the individual customer level,  
12 which is provided to Company witness Cifuentes to be  
13 aggregated into the revenue budget. Detailed revenue data by  
14 month is generated and provided for inclusion in the income  
15 statement.

16  
17 **Q.** How did the Company prepare the 2021 projected test year O&M  
18 expense budget?

19  
20 **A.** O&M expense was prepared through the Company's detailed cost  
21 center level approach covering all operational areas,  
22 corporate departments and intercompany O&M charges for shared  
23 services provided by Tampa Electric and Emera. O&M expenses  
24 were further budgeted by resource type (payroll, benefits,  
25 materials and supplies, outside services, etc.). Payroll

1 expenses were budgeted by position with an allocation of those  
2 payroll costs between O&M, capital expenditures, clause  
3 recoverable and charges to affiliates as appropriate. Other  
4 resource types were budgeted by cost center based on projected  
5 activity levels and requirements. To project costs in 2021-  
6 year dollars, a salary and wages increase was applied to  
7 payroll costs and a general inflation rate was applied to  
8 other resource types as appropriate. The 2021 cost  
9 projections for pension and post-retirement benefits expense  
10 were provided by the Company's external actuarial firm,  
11 Mercer.

12  
13 Prior to finalizing the 2021 O&M budget, Peoples' senior  
14 management team reviewed all new labor positions and non-  
15 labor resource additions being proposed for alignment with  
16 overall Company objectives and strategic initiatives.

17  
18 **Q.** Is the Company proposing new depreciation rates in this  
19 proceeding to be effective in the 2021 projected test year?

20  
21 **A.** Yes, the Company is proposing new depreciation rates in this  
22 proceeding to be effective as of January 1, 2021. The new  
23 rates have been determined in the Company's Depreciation  
24 Study that has been filed in a separate docket. The  
25 Depreciation Study is supported by the direct testimony of

1 expert witness Dane Watson.

2

3 **Q.** How did the Company forecast depreciation expense for the  
4 2021 projected test year?

5

6 **A.** The Company calculated the test year depreciation expense by  
7 applying the Company's new proposed depreciation rates to the  
8 2021 monthly balances of plant-in-service.

9

10 **Q.** Please discuss how property tax expense was budgeted.

11

12 **A.** Property tax expense represents payments made by the Company  
13 to county governments for ad valorem taxes. The projected  
14 expense is a function of forecasted tax rates and the  
15 projected values that will be used by the counties to assess  
16 the Company's plant assets. As investment in assets grows,  
17 property tax expense also grows. As a result, the Company  
18 projects that ad valorem property taxes will grow to roughly  
19 \$16.0 million in 2021 from the \$7.6 million included in the  
20 2009 rate case revenue requirements.

21

22 **Q.** Please discuss how income taxes were budgeted.

23

24 **A.** As supported by Company witness Strickland, income tax  
25 expense for the test year was computed on a stand-alone basis

1 consistent with the Company's last base rate proceeding.  
2 Projected total income tax expense is a function of forecasted  
3 taxable income coupled with the IRS and Florida state tax  
4 rules expected to be in place during the test year. All  
5 NOI and capital structure amounts reflect reasonable budget  
6 projections, consistent regulatory treatments and compliance  
7 with the normalization requirements of the Internal Revenue  
8 Code.

9  
10 **NET OPERATING INCOME**

11 **Q.** How did the Company determine the test year 2021 NOI?

12  
13 **A.** As previously mentioned, the Company determined its test year  
14 NOI by first following its normal detailed annual income  
15 statement budgeting process. Adjustments to the budgeted  
16 income statement were then applied to determine the test year  
17 2021 NOI.

18  
19 **Q.** What is the Company's projected test year 2021 NOI without  
20 rate relief?

21  
22 **A.** As shown on MFR Schedule G-2, page 1, the Company is  
23 projecting the 2021 NOI as adjusted to be approximately \$40.8  
24 million.

25

1 Q. Were adjustments to the budgeted income statement were made  
2 to determine the 2021 projected test year NOI?

3

4 A. Yes, adjustments were made reflective of previous Commission  
5 directives and policies from Peoples' prior base rate  
6 proceedings.

7

8 Q. Did the Company make any changes in determining its test year  
9 2021 operating expenses?

10

11 A. Yes. The following changes are being proposed by the Company:  
12 1) Implement new depreciation rates as supported by the  
13 Depreciation Study as filed in a separate docket and included  
14 in the direct testimony of expert witness Watson,  
15 2) Increase the Company's annual accrual to the storm damage  
16 reserve,  
17 3) Increase the amortization expense related to the  
18 Manufactured Gas Plant ("MGP") environmental remediation  
19 regulatory asset, and  
20 4) Amortize rate case expenses related to this base rate  
21 proceeding over a three-year period.

22

23 Q. What impact does the new proposed depreciation rates have on  
24 the 2021 projected test year operating expense included in  
25 NOI?

1 **A.** The overall impact on the 2021 NOI is an increase in  
2 depreciation expense of approximately \$3.7 million.

3  
4 **Q.** Why is the Company proposing to increase the accrual to the  
5 storm damage reserve?

6  
7 **A.** In Peoples' last base rate proceeding, the Commission  
8 approved an annual storm reserve accrual of \$57,500 on the  
9 basis of and in accordance with the Incremental Cost and  
10 Capitalization Approach ("ICCA") methodology guidance under  
11 Rule 25-6.0143, F.A.C. In the 10-year period from 2010  
12 through 2019, Peoples incurred approximately \$3.8 million of  
13 incremental storm costs using the ICCA methodology while  
14 accruing only \$575,000. As shown in Document No. 3 of my  
15 exhibit, approximately \$3.3 million of the recognized storm  
16 costs were related to Hurricane Michael, which exhausted the  
17 storm reserve. Subsequent to Hurricane Michael, in 2019,  
18 Peoples' service areas narrowly avoided the effects of  
19 Hurricane Dorian, a major hurricane that threatened the  
20 densely populated east coast of Florida. Although some costs  
21 were incurred preparing for Hurricane Dorian, the cost of  
22 this storm could have far exceeded the effects of Hurricane  
23 Michael.

24  
25 Considering the actual experienced incremental costs over the

1 past 10-year period reflected on Document No. 3 of my exhibit  
2 and the potential for major hurricanes to threaten Peoples'  
3 service areas across Florida, the Company proposes increasing  
4 the storm reserve accrual to \$380,000 per year and increasing  
5 the \$1.0 million cap approved in the Company's last base rate  
6 proceeding to \$3.8 million. If the storm reserve account  
7 balance were to reach this level, Peoples would stop accruing  
8 the annual expense amount requested in this rate proceeding.  
9

10 **Q.** Why is Peoples' proposing to increase the annual amortization  
11 expense for MGP environmental remediation costs?  
12

13 **A.** In Docket No. 19980434-GU and Commission Order No. PSC-1998-  
14 0739-FOF-GU issued on May 28, 1998, Peoples was ordered to  
15 continue to accrue \$640,000 annually and to continue to use  
16 reserve accounting to recover the estimated MGP clean-up  
17 costs. In 2016, Peoples entered into a settlement agreement  
18 approved by the Commission under Docket No. 20160159-GU,  
19 which called for Peoples to amortize at least \$32.0 million  
20 of MGP-related costs during the period 2016 - 2020. The \$32.0  
21 million of amortization was achieved by the end of 2018 as  
22 part of the settlement agreement approved by the Commission  
23 under Docket No. 20180044-GU. The settlements were a  
24 recognition by all parties that the \$640,000 annual accrual  
25 was inadequate to recover the incurred and projected MGP

1 clean-up costs.

2  
3 As reflected in Document No. 4 of my exhibit, as of December  
4 31, 2019, the Company's MGP liability is approximately \$20.8  
5 million. The Company's related MGP net regulatory asset  
6 reflects the need to recover the \$20.8 million MGP liability  
7 related to future expenditures plus the over or under-  
8 recovery of actual remediation costs already incurred. The  
9 over or under-recovery amount is determined by comparing the  
10 actual remediation costs incurred less the cumulative amount  
11 of MGP-related regulatory asset amortization expense that has  
12 been recognized on the Company's income statement. As  
13 mentioned above, the Company did amortize \$32.0 million of  
14 MGP-related regulatory assets between 2016 and 2018. The  
15 accelerated amortization of the MGP-related regulatory asset  
16 has resulted in an over-recovered balance of approximately  
17 \$0.8 million as of December 31, 2019. As shown in Document  
18 No. of 4 of my exhibit, the net MGP-related regulatory asset  
19 is approximately \$20.0 million. Amortizing the approximate  
20 \$20.0 million of MGP-related net regulatory assets through a  
21 \$640,000 annual expense would take over 30 years. The Company  
22 proposes a more reasonable recovery period of approximately  
23 20 years, or an increase to the annual amortization expense  
24 from \$640,000 to \$1.0 million.

25

1 **Q.** What is the rate case expense and amortization being proposed  
2 by the Company?

3

4 **A.** As reflected in MFR Schedule C-13, the Company has included  
5 \$552,333 in annual expense for the amortization of  
6 approximately \$1.65 million in rate case costs over a proposed  
7 three-year amortization period. The \$1.65 million estimated  
8 rate case cost reflects less than a two percent annual  
9 percentage increase over the approximate \$1.4 million of  
10 actual costs incurred in the Company's prior rate case filed  
11 in 2008.

12

13 **Q.** What amount of off-system sales margin has been included in  
14 the projected test year in determining the Company's NOI?

15

16 **A.** The Company has budgeted approximately \$1.3 million of off-  
17 system sales' ("OSS") net revenues to Peoples in 2021, which  
18 is consistent with the Company's 2019 actual net revenues  
19 achieved. This is the most recent annual results reflecting  
20 current market conditions and opportunities for OSS margin.  
21 It also assumes retaining the sharing mechanism that has been  
22 in place since its last base rate proceeding, with 25 percent  
23 of OSS net revenues being retained by the Company and 75  
24 percent going to offset expenses recovered through the PGA  
25 clause.

1 **OPERATIONS & MAINTENANCE EXPENSE**

2 **Q.** What is the largest operating expense impacting the Company's  
3 NOI?

4  
5 **A.** O&M expense is the largest expense item impacting the  
6 Company's NOI.

7  
8 **Q.** What are the functions comprising Peoples' O&M expense?

9  
10 **A.** Peoples classifies its O&M expense into FERC designated  
11 functions including Administrative and General ("A&G"),  
12 Distribution, Customer Accounts, and Sales Expense. In  
13 addition, the Company has adjusted O&M expenses related to  
14 Gas Plant Leased to Others that has been classified as "Other"  
15 O&M expense.

16  
17 **Q.** Does Peoples' O&M expense include A&G charges from Tampa  
18 Electric and TECO Services?

19  
20 **A.** Yes. Peoples' O&M expense includes charges for various shared  
21 services provided by TECO Services, Inc. ("TSI") and Tampa  
22 Electric. These shared service costs are included in A&G  
23 FERC account 930.2 on MFR Schedule G-2, page 18. The services  
24 received are primarily corporate shared services consisting  
25 of procurement, information technology, telecommunications,

1 human resources, payroll processing, treasury, tax support,  
2 legal services, risk management, audit services, real estate,  
3 regulatory support, mail room services, bank charges,  
4 facility services and rent. Expenses are charged to Peoples  
5 at cost pursuant to the TECO Energy, Inc. Cost Allocation  
6 Manual ("CAM").

7  
8 Costs are either charged as direct costs charged to an  
9 affiliate ("Direct Charges"); indirect costs for services  
10 assessed to more than one affiliate using one or more formulas  
11 for assessment ("Assessed Charges"); or allocated to multiple  
12 affiliates ("Allocated Charges") using a variant of the  
13 Modified Massachusetts Method ("MMM"). This MMM for  
14 Allocated Charges has been consistently applied since Peoples  
15 became part of TECO Energy in 1997 and is consistent with the  
16 methodology employed during the Company's last two base rate  
17 proceedings. No cost is allocated or assessed twice to any  
18 affiliate.

19  
20 Beginning January 1, 2020, the TSI shared service functions  
21 and employees were assigned to Tampa Electric. The  
22 methodology for allocating the costs for shared services to  
23 Peoples in the 2020 and 2021 budget is consistent with the  
24 methodology used in 2019.

25

1 Q. What was the amount of MMM Allocated Charges received by  
2 Peoples in the 2019 historical base year and 2021 budget?

3  
4 A. As shown in Document No. 2 of my exhibit, Peoples received  
5 \$3.47 million of MMM Allocated Charges in 2019, as compared  
6 to \$3.65 million MMM Allocated Charges budgeted for 2021.

7  
8 Q. How do these amounts compare with the MMM Allocated Charges  
9 included in the Commission approved revenue requirements in  
10 Peoples last base rate case proceeding?

11  
12 A. In the Company's prior base rate case proceeding, the MMM  
13 Allocated Charges included in the final Commission approved  
14 2009 test year revenue requirements was approximately \$3.93  
15 million.

16  
17 Q. Does the Company receive charges from its indirect owner,  
18 Emera, Inc. ("Emera")?

19  
20 A. Yes. The Company directly receives Assessed Charges from  
21 Emera for certain corporate and strategic support services,  
22 shared subscriptions, shared software license fees, and  
23 charges for certain Emera executive's participation on Tampa  
24 Electric Company's Board of Directors. The corporate support  
25 includes Sarbanes-Oxley compliance oversight, safety

1 oversight, cyber & general security oversight, environmental  
2 policy and programs governance, technical accounting support,  
3 and corporate-wide human resource and health promotion  
4 initiatives. In addition to the direct Assessed Charges from  
5 Emera, Peoples receives Allocated Charges from Emera for  
6 corporate governance and strategic support.

7  
8 **Q.** What were the total costs received from Emera in the 2019  
9 historical base year and the 2021 projected test year?

10  
11 **A.** The amount of Assessed Charges received from Emera was  
12 approximately \$0.36 million in the 2019 historical base year  
13 compared to \$0.51 million in the 2021 projected test year.  
14 The amount of Allocated Charges from Emera was approximately  
15 \$0.73 million in the 2019 historical base year compared to  
16 approximately \$1.06 million in the 2021 projected test year.  
17 All costs received by Peoples from Emera are included in A&G  
18 FERC account 930.2 on MFR Schedule G-2, page 18.

19  
20 **Q.** Has an adjustment been made to allocate Peoples' A&G expenses  
21 between the utility and any non-utility affiliates?

22  
23 **A.** Yes. Consistent with the Company's prior base rate  
24 proceeding, Peoples charges a portion of its corporate A&G  
25 expenses to its non-utility affiliates. The A&G charges from

1 Peoples to the non-utility affiliates are based on budgeted  
2 expense for the year and are determined based on an allocation  
3 methodology using net revenues, payroll, and gross plant in  
4 service, in order to calculate a weighted average allocation  
5 factor for each entity. Because the A&G charges to the non-  
6 utility affiliates are reflected as credits in the actual  
7 per-books expenses, no further adjustment is required. MFR  
8 Schedule C-6 shows the amount of A&G (and other) expenses  
9 that have been allocated.

10  
11 **Q.** Has Peoples analyzed overall O&M expense since the last rate  
12 case proceeding in comparison to the 2019 historical base  
13 year?

14  
15 **A.** Yes, we have analyzed the Company's 2019 historical base year  
16 O&M using the "O&M benchmark" approach the Commission uses to  
17 analyze the growth of adjusted O&M costs as compared to  
18 customer-growth and the CPI inflationary measures published  
19 by the U.S. Bureau of Labor Statistics. Adjusted O&M excludes  
20 O&M recoverable through clauses and riders.

21  
22 The adjusted O&M expense for the 2019 historic base year is  
23 \$107.0 million compared to a calculated benchmark of \$99.2  
24 million using the Commission methodology of increasing O&M  
25 expenses by the rate of inflation plus customer-growth. The

1 historic base year O&M expense is more than the benchmark by  
2 approximately \$7.8 million, or 7.9 percent. As discussed  
3 later in my testimony, the primary functional areas driving  
4 the increase are Distribution and Customer Accounts. The  
5 amounts by functional area are detailed on MFR Schedule C-  
6 34.

7  
8 **Q.** Are all the functional areas of the O&M benchmark calculated  
9 using the same compound multipliers?

10  
11 **A.** Yes, all the functional areas of the O&M benchmark were  
12 calculated using the same compound multiplier as developed on  
13 MFR Schedule C-37, which is 1.5089.

14  
15 **Q.** What is the benchmark comparison for A&G expense?

16  
17 **A.** As shown on MFR Schedule C-34, A&G Expense for the 2019  
18 historical base year is approximately \$0.6 million lower than  
19 the benchmark, or 1.2 percent below the benchmark  
20 calculation. Excluding approximately \$3.3 million of  
21 Hurricane Michael storm costs that were recognized in 2019  
22 coincident with the temporary storm surcharge billings, the  
23 adjusted A&G Expense for the 2019 historical base year is  
24 approximately \$3.9 million lower than the benchmark.

25

1 **Q.** Although the adjusted A&G expense for the 2019 historical  
2 base year is below the benchmark, are there any A&G expense  
3 items that have shown significant increases since the 2007  
4 historical base year?

5  
6 **A.** Yes. As discussed in Company witness Charlene McQuaid's  
7 direct testimony, like many companies in the U.S., health-  
8 care costs increases have been a challenge. Since the 2007  
9 historical base year from the prior base rate proceeding, the  
10 Company's healthcare cost increased from just over \$4.0  
11 million to approximately \$7.8 million in 2018 and \$6.6 million  
12 in 2019. Health-care benefit costs are accounted for in FERC  
13 account 926.

14  
15 **Q.** What is the benchmark comparison for distribution expense?  
16

17 **A.** As shown on MFR Schedule C-34, distribution expense for the  
18 2019 historical base year is approximately \$5.9 million, or  
19 23 percent, more than the benchmark. Company witness Richard  
20 Wall discusses the operational items causing the distribution  
21 expense in 2019 to exceed the benchmark in his testimony.

22  
23 **Q.** Please explain the non-operational items causing the 2019  
24 distribution expense to exceed the benchmark as evidenced on  
25 Schedule MFR C-38.

1 **A.** There are two non-operational items causing the 2019 base  
2 year Distribution O&M to exceed the Commission benchmark.  
3 One is a change in accounting and the other is a non-recurring  
4 credit recognized in 2007.

5  
6 1) Changes in the accounting for vehicle depreciation - Prior  
7 to the Company's implementation of its SAP financial system  
8 in 2012, depreciation of vehicles stayed in depreciation  
9 expense on the income statement. Upon implementing the SAP  
10 financial system, the vehicle-related depreciation expense  
11 was included in the fleet transportation costs assessment  
12 that follows labor charges. As a result, a portion of the  
13 vehicle depreciation costs began flowing to O&M expense along  
14 with O&M related labor costs. Therefore, the vehicle  
15 depreciation expense accounting change is a relocation of  
16 expenses on the income statement and not a true increase in  
17 overall operating expenses. The amount of vehicle-related  
18 depreciation expense in the 2019 O&M expense was  
19 approximately \$1.5 million.

20  
21 2) Non-Recurring Credit - In 2007, the Company's FERC account  
22 878 (Meter and house regulator expenses) included an  
23 approximate \$1.05 million non-recurring credit related to  
24 defective meters. After applying the 1.5089 compound  
25 multiplier developed on MFR Schedule C-37, the \$1.05 million

1 2007 non-recurring credit results in an approximate \$1.58  
2 million reduction to the 2019 Distribution expense benchmark  
3 calculated on MFR Schedule C-34.

4  
5 **Q.** What is the benchmark comparison for Customer Accounts  
6 expense?

7  
8 **A.** As shown on MFR Schedule C-34, Customer Accounts expense for  
9 the 2019 historical base year is approximately \$1.4 million,  
10 or 10.6 percent, more than the benchmark.

11  
12 **Q.** Why is the Company's Customer Accounts expense exceeding the  
13 benchmark?

14  
15 **A.** The Company's shared SAP customer relationship management and  
16 billing system ("CRMB") went into service in 2017. Although  
17 the CRMB system is shared with Tampa Electric, all of the  
18 asset is recorded on Tampa Electric's books and Peoples is  
19 charged an "asset-usage fee" for using the system to manage  
20 Peoples' customer accounts. The asset-usage fee is a charge  
21 for a portion of the CRMB system depreciation expense incurred  
22 by Tampa Electric. Peoples' portion of the depreciation  
23 expenses is based on the approximate ratio of Peoples  
24 customers to the total Peoples and Tampa Electric combined  
25 customers. The asset-usage fee is included in Peoples' O&M

1 expense in the Customer Accounts expense function. The total  
2 amount of CRMB system asset-usage fees charged to Peoples in  
3 2019 was approximately \$2.1 million. As shown on MFR Schedule  
4 C-38, after adjusting for this item, the Company's 2019 actual  
5 costs are below the benchmark comparison for Customer  
6 Accounts expense by approximately \$0.7 million, or 5.2  
7 percent.

8  
9 **Q.** How was the O&M expense budget for 2020 and 2021 developed?

10  
11 **A.** The Company's 2020 and 2021 budget for O&M expense was  
12 prepared in the detailed annual income statement budget  
13 process that I described earlier in my direct testimony. The  
14 Company's Board of Directors approved the 2020 and 2021 income  
15 statement budgets, including O&M expense. In addition to the  
16 detailed O&M budget, in the MFRs Schedule G-2, pages 10-19,  
17 a calculation has been made of O&M expense by FERC account  
18 for 2020 and 2021 using the "trending methodology" prescribed  
19 by MFR Schedule G-2, adjusting for certain items where trend  
20 factors do not capture the projected changes in O&M expense.  
21 The comparison of the two O&M methodologies is shown on  
22 Document No. 2 of my exhibit.

23  
24 **Q.** How does the detailed 2020 and 2021 O&M budget compare with  
25 the trended FERC O&M budget data on MFR Schedule G-2?

1 **A.** As shown in Document No. 2 of my exhibit, the difference or  
2 unreconciled amount between the detailed 2020 and 2021 O&M  
3 budgets and the 2020 and 2021 FERC O&M budget data on MFR  
4 Schedule G-2 is approximately \$123,000 and \$74,000,  
5 respectively, which is a difference of approximately 0.1  
6 percent. The differences are reflected as a line item labeled  
7 "Unreconciled budget items" in FERC Account 930.2  
8 (Miscellaneous general expenses) on MFR Schedule G-2, page  
9 18. As a result of reflecting the \$123,000 and \$74,000 as  
10 unreconciled budget items in FERC account 930.2, the total  
11 FERC O&M calculated using trending on MFR Schedule G-2 for  
12 2020 and 2021 equals the detailed 2020 and 2021 O&M budgets,  
13 or approximately \$108.3 million for 2020 and \$121.3 million  
14 for 2021. Excluding the 2021 unreconciled budget items of  
15 \$74,000, the O&M expense calculated in MFR Schedule G-2 would  
16 be higher than the O&M expense determined in the Company's  
17 detailed 2021 budget.

18  
19 **Q.** What trending factors were used in Schedule G-2 to develop  
20 the 2020 and 2021 O&M expense amounts?

21  
22 **A.** Consistent with the Company's prior rate cases, Peoples used  
23 the trending factors of payroll only, customer-growth plus  
24 inflation, and inflation only. The Company did not consider  
25 the trending factor payroll plus customer-growth as done in

1 prior rate cases. Instead, the Company has specifically  
2 identified payroll position additions and their impact on the  
3 2020 and 2021 budgeted O&M by FERC account, which is discussed  
4 later in my testimony. For inflation, the Company used  
5 Moody's Economy.com's 2020 and 2021 forecast for the CPI-U,  
6 which was 2.2 percent for both years. Payroll trending  
7 includes increases of 3.0 percent for 2020 and 2021, which  
8 was provided by the Company's Human Resources department.  
9

10 **Q.** What are the main drivers for the projected increases in O&M  
11 in the 2021 test year?  
12

13 **A.** Besides inflationary and customer-growth pressures on O&M,  
14 the Company is projecting increases due to the following:  
15 - As discussed in Company witness Wall's direct testimony,  
16 further operational resources are needed to continue  
17 enhancing the safety and reliability of the gas distribution  
18 system for the benefit of customers and the public in the  
19 communities we serve,  
20 - As discussed in Company witness O'Connor's direct  
21 testimony, adding technical resources to provide customers  
22 innovative energy solutions related to LNG and RNG and improve  
23 the Company's data-analytics capabilities,  
24 - As discussed in Company witness Monica A. Whiting's direct  
25 testimony, enhancing our customers' experience through

1 technology improvements, and

2 - As discussed in Company witness McQuaid's direct testimony,  
3 escalating health care costs.

4  
5 **Q.** You mentioned that certain O&M expense items were not  
6 projected using the trending factors. How are those items  
7 reflected on Schedule G-2?

8  
9 **A.** That is correct. New payroll positions are shown on "Payroll  
10 not trended" lines on MFR Schedule G-2, pages 10-19. In  
11 addition, there are certain O&M expense items that do not  
12 follow the inflation and customer growth trend factors. In  
13 those cases, the Company used the "Other not trended" lines  
14 on MFR Schedule G-2, pages 10-19 to reflect O&M expense yearly  
15 changes from the 2019 actual, 2020 budget and 2021 budget.

16  
17 **Q.** What are some of these noteworthy "not trended" O&M expense  
18 items referred to above?

19  
20 **A.** Below is a description of the noteworthy "not trended" items  
21 included in MFR Schedule G-2, pages 10-19. Document No. 5 of  
22 my exhibit summarizes by FERC account the O&M expense items  
23 labeled "Other not trended" on MFR Schedule G-2, pages 10-  
24 19.

25

1       FERC Account 413 - Expenses of Gas Plant Leased to Others -

2       This account includes CNG station O&M expenses budgeted based  
3       on contract terms with third parties providing CNG station  
4       O&M services.

5  
6       FERC Account 887 - Maintenance of Mains -The other non-trended

7       items reflect the Company's Transmission Integrity Management  
8       Program ("TIMP") costs. As discussed by Company witness Wall,  
9       the pipeline integrity compliance costs can vary from year-  
10      to-year depending on which pipelines are due for assessment  
11      and inspection. Contractors are heavily relied upon to  
12      complete these compliance requirements. In 2021, several  
13      reassessments are scheduled to be completed on several  
14      pipelines totaling approximately \$1.96 million. In addition,  
15      in 2021 the Company has budgeted approximately \$0.15 million  
16      for outside engineering assistance related to TIMP risk  
17      analysis assessments and plan updates.

18  
19      FERC Account 903 - Customer Accounts and Records Expense -

20      This account includes asset-usage fees for the companies CRMB  
21      system I discussed earlier in my testimony. The non-trended  
22      amounts reflect the projected depreciation expense allocated  
23      from Tampa Electric to Peoples as an O&M asset-usage fee.  
24      The budgeted increase in the asset-usage fee reflects  
25      budgeted functionality improvements to the CRMB system that

1 result in additional depreciation expense at Tampa Electric,  
2 which in turn increases the asset-usage fees to Peoples.  
3 Peoples is not charged a return on the CRMB asset by Tampa  
4 Electric. The CRMB asset-usage fees are budgeted to increase  
5 from the 2019 actual of \$2.1 million to \$2.2 million and \$2.4  
6 million in 2020 and 2021, respectively.

7  
8 FERC Account 904 - Uncollectible Accounts - The 2021 bad debt  
9 expense of approximately \$1.3 million was based on the four-  
10 year average write-off percentage. This approach is  
11 consistent with that used by in the Company's past base rate  
12 proceedings.

13  
14 FERC Account 912 - Demonstrating and Selling Expenses - This  
15 account primarily reflects the cost of marketing services  
16 provided to Peoples by its affiliate TPI.

17  
18 FERC Account 920 - Administrative and General Salaries - The  
19 "Other not trended" amount reflects the Company's short-term  
20 incentive-pay for all employees based on the Company's annual  
21 achievements against pre-established goals. These goals  
22 include measures for safety, employee development, customer  
23 service, operational performance and financial goals.

24  
25 The payroll budget for the "payroll not trended" relates to

1 several new roles created in 2020 and 2021 such as the  
2 Director of Human Resources, Director of Safety, positions in  
3 the LNG and RNG specialist fields to gain industry expertise  
4 as discussed by Witness Tim O'Connor in his testimony,  
5 contractor safety, regulatory, and business operational  
6 support.

7  
8 FERC Account 924 - Property Insurance - The Other not trended  
9 for this account includes the expense recognition for storm  
10 costs. As discussed earlier in my testimony, the Company is  
11 proposing to increase the annual accrual for the storm reserve  
12 from \$57,500 to \$380,000. In 2019, the Company recognized  
13 storm costs related to Hurricane Michael coincident with the  
14 storm cost surcharges collected from customers.

15  
16 FERC Account 925 - Injuries and Damages - Injuries and Damages  
17 ("I&D") expense includes the insurance costs and the self-  
18 insured or deductible component of legal claims, including  
19 adjustments to the I&D reserve for the self-insured portion  
20 of claims incurred but not paid. Legal fees related to claims  
21 and a portion of the Company's damage prevention efforts are  
22 also included in FERC account 925. Regarding general-  
23 liability exposure, the Company maintains a \$1 million self-  
24 insurance or deductible limit.

25

1 To determine the claims and related legal expenses in the  
2 2021 budget, the Company prepared an analysis of the past  
3 five years' expense in I&D-related activity. Over this  
4 period, the dollar value of claims incurred and the reserve  
5 account levels have fluctuated significantly, so an average  
6 over the five-year period was determined. In 2019, the I&D  
7 reserve was adjusted resulting in an approximate \$1.7 million  
8 expense recognition. The 2021 budgeted I&D-related reserve  
9 expense adjustments is approximately \$0.2 million. In 2019,  
10 the Company incurred approximately \$0.9 million of I&D-  
11 related legal costs that were non-recurring.

12  
13 The 2021 budgeted insurance premiums were based on premium  
14 estimates from the Company's outside insurance broker, Marsh.  
15 Marsh's estimates reflect a large increase in insurance  
16 premiums due to changes in insurance market conditions,  
17 resulting from deteriorating industry claims experience and  
18 Peoples' own claims experience over recent years. In  
19 addition, the Company is planning to increase its total  
20 liability insurance limits of coverage from \$300 million in  
21 2019 to \$400 million in 2020 and 2021 in response to the  
22 increase in the frequency of severe industry loss events and  
23 exposures such as wildfire. Marsh's estimates for total  
24 insurance premiums and fees reflects an increase from  
25 approximately \$2.0 million in 2019 to \$3.1 million and \$3.8

1 million in 2020 and 2021, respectively.

2  
3 FERC Account 926 - Employee Pensions and Benefits - This  
4 account includes employee benefits expenses. Although cost  
5 for the various benefits provided to employees can vary from  
6 year to year, the net expense in FERC account 926 is budgeted  
7 to increase from approximately \$10.5 million in 2019 to \$10.7  
8 million and \$10.9 million in 2020 and 2021, respectively. A  
9 portion of the gross benefits costs are capitalized with labor  
10 or are related to non-base rate recoverable labor activities  
11 such as conservation clause. Therefore, these are net  
12 amounts. Also included in FERC account 926 is the Company's  
13 Long-Term Incentive Plan ("LTIP") costs. The Company's LTIP  
14 program is discussed further in the testimony of Witness  
15 McQuaid. The projected LTIP expense in 2021 is approximately  
16 \$1.56 million as compared to \$1.96 million in 2019. The LTIP  
17 cost and payout was higher in 2019 due to exceeding  
18 established targets. The 2021 budget does not assume the  
19 targets are exceeded.

20  
21 **RATE BASE**

22 **Q.** What are the primary components of Peoples' rate base?

23  
24 **A.** As detailed in MFR Schedule G-1, page 1, the largest items in  
25 rate base are utility plant-in-service and construction work-

1 in-progress ("CWIP"). These amounts are reduced by  
2 accumulated provision for depreciation on utility plant. In  
3 addition to the plant related balances, the other component  
4 of rate base is the allowance for working capital.

5  
6 **Q.** What is the 2021 projected test year 13-month average adjusted  
7 rate base?

8  
9 **A.** As detailed on page 1 of MFR Schedule G-1, Peoples' 13-month  
10 average adjusted rate base as of December 31, 2021, is  
11 projected to be \$1,578.7 million. This includes moving  
12 approximately \$200.7 million of CI/BSR investments made  
13 through December 31, 2020, into rate base effective January  
14 1, 2021. The nearly \$1.6 billion of rate base is an increase  
15 of over 180 percent compared to the \$560.0 million previously  
16 approved in Peoples' last base rate proceeding.

17  
18 **Q.** How did the Company forecast the 2021 projected test year  
19 balances for utility plant and CWIP?

20  
21 **A.** The balances were projected forward from December 31, 2019,  
22 actual balances using the detailed 2020 and 2021 capital  
23 expenditures budget described more fully below. In addition  
24 to the capital expenditures budget, plant retirements and  
25 removal costs were projected based on historical trends.

1 Q. Please explain how Peoples determines its capital expenditure  
2 budgets.

3  
4 A. Peoples separates its capital into two categories, specific  
5 major projects and recurring expenditures. Normal recurring  
6 expenditures are those routine capital costs required to  
7 provide service to new customers as well as costs associated  
8 with the replacement and/or relocation of existing facilities  
9 and equipment. Specific projects generally represent major  
10 projects with costs in excess of \$500,000. Specific projects  
11 include large main expansions or large maintenance projects  
12 such as gate station upgrades, large main replacements or  
13 major distribution system improvements. Specific projects  
14 can also include technology projects such as a software system  
15 implementation or upgrade.

16  
17 Recurring capital expenditures are trended using recent 12-  
18 month actual spending data. This includes projecting capital  
19 spending for items such as meter sets and services lines,  
20 routine maintenance capital, and recurring general plant  
21 additions.

22  
23 Q. Does the Company classify the capital spending based on the  
24 objective?

25

1 **A.** Yes. As discussed by Company witness Wall, Peoples classifies  
2 capital spending as growth, sustaining or legacy integrity  
3 projects. In addition, with the approval by the Commission to  
4 accrue AFUDC starting in 2019, the Company also separates  
5 AFUDC eligible projects.

6  
7 **Q.** Did the Company's Board of Directors approve the capital  
8 expenditure budgets?

9  
10 **A.** Yes. The 2021 capital budget that incorporated 2020 capital  
11 budget was approved by the Company's Board of Directors in  
12 March 2020.

13  
14 **Q.** What is the amount of the Company's 2020 capital budget used  
15 to produce the 2021 projected test year rate base?

16  
17 **A.** As reflected in Document No. 6 of my exhibit, the 2020 capital  
18 budget is \$358.7 million. In addition, the \$358.7 million  
19 2020 capital budget is reflected on MFR Schedule G-1, page  
20 23, as the sum of the total Construction Costs of \$348.5  
21 million and Cost of Removal of \$10.2 million.

22  
23 **Q.** What is the amount of the Company's 2021 capital budget?

24  
25 **A.** As reflected in Document No. 6 of my exhibit, the 2021 capital

1 budget is \$263.8 million. In addition, the \$263.8 million  
2 2021 capital budget is reflected on MFR Schedule G-1, page  
3 26, as the sum of the total Construction Costs of \$255.3  
4 million and Cost of Removal of \$8.5 million.

5  
6 **Q.** What was the actual amount of capital expenditures in 2019?

7  
8 **A.** The 2019 capital expenditures totaled \$234.2 million.

9  
10 **Q.** What are the primary drivers for the increase in 2020 capital  
11 budget over 2019 actual spending?

12  
13 **A.** As further discussed in Company witness O'Connor's and Wall's  
14 direct testimonies, important expansion capital projects are  
15 under construction in the Jacksonville, Southwest Florida and  
16 Panama City service areas to meet increasing customer demand  
17 and enhance the reliability and long-term flexibility of the  
18 system in these areas, as well as a LNG storage system  
19 project in the Miami service area and the Company's first RNG  
20 processing facility project. Spending on these five large  
21 capital projects in 2020 is approximately \$132.0 million and  
22 is the primary driver for the increase over 2019 actual  
23 spending.

24  
25 **Q.** What are the other drivers of the capital spending levels in

1 the 2020 and 2021 Budgets?

2  
3 **A.** As discussed in Company witness Wall's direct testimony,  
4 there are several other drivers including general increases  
5 in construction costs and the Company's investments in system  
6 safety and resiliency and operations technology improvement  
7 projects.

8  
9 **Q.** Regarding the accumulated provision for depreciation, how did  
10 the Company project the test year balances?

11  
12 **A.** The Company started with the actual accumulated provision for  
13 depreciation balances as of December 31, 2019. The projected  
14 provision for depreciation expense was added and projected  
15 retirements and costs of removal were subtracted from the  
16 starting accumulated provision for depreciation balances.  
17 The projected provision for depreciation expense through  
18 December 31, 2020, was based on the Company's current  
19 depreciation rates approved by the Commission in Order No.  
20 PSC-2018-0501-S-GU. The projected provision for depreciation  
21 expense from January 1, 2021 through December 31, 2021 was  
22 based on the Company's proposed depreciation rates that were  
23 determined in the Depreciation Study supported by the direct  
24 testimony of Company expert witness Watson in a separate  
25 docket. The projected retirements were based on the same

1 methodology to estimate retirements from plant-in-service,  
2 and costs of removal were based on the forecast amount for  
3 2020 and 2021 based on historical trends.  
4

5 **Q.** What amount of working capital allowance has the Company  
6 included in rate base for the 2021 projected test year?  
7

8 **A.** As shown on MFR Schedule G-1, Page 1, the Company is  
9 requesting a net negative \$12.0 million in working capital  
10 allowance for the 2021 projected test year.  
11

12 **Q.** What methodology did the Company use to calculate this level  
13 of working capital?  
14

15 **A.** Working capital was developed using the balance sheet method  
16 which has been accepted for many years by the Commission.  
17 The various components that make up working capital were  
18 projected using a variety of methods described in MFR Schedule  
19 G-6, pages 2 and 3.  
20

21 **Q.** How does the 2021 projected test year allowance for working  
22 capital compare to the Company's actual 2019 allowance for  
23 working capital?  
24

25 **A.** As shown on MFR Schedule G-1, Page 1, Peoples' 2019 allowance

1 for working capital included in rate base was a net negative  
2 \$27.5 million compared to the 2021 net negative \$12.0 million.  
3 The primary driver for the net \$15.5 million positive change  
4 is related to the significant amount of MGP environmental  
5 remediation spending budgeted for year 2020 and 2021. Over  
6 or under-recovery of MGP spending compared to the amount  
7 amortized is accounted for in an MGP regulatory asset or  
8 liability. The MGP spending in excess of the MGP regulatory  
9 asset amortization during 2020 and 2021 is approximately  
10 \$15.0 million, which is most of the \$15.5 million change in  
11 allowance for working capital.

12  
13 **Q.** Please describe how the Company determined the 2021 projected  
14 test year balance sheet.

15  
16 **A.** In developing projections for the balance sheet accounts for  
17 the 2021 projected test year, the Company employed the same  
18 process used in developing its annual budgeted balance sheet.  
19 These methods are described on an account by account basis in  
20 MFR Schedule G-6. The December 31, 2019, account balances  
21 were used as the beginning balances for projecting the 2020  
22 and 2021 balance sheets, with each line item being forecasted  
23 through the projected test year. Balance sheet accounts,  
24 including Accounts Receivable, Accounts Payable, and Unbilled  
25 Revenues, were trended for known patterns of activity that

1 occur in the normal course of business. Finally, for the  
2 regulatory clause accounts -- Unrecovered Gas Costs, CI/BSR,  
3 and Conservation Cost Recovery -- the Company forecasted the  
4 2021 13-month average balances by rolling forward the  
5 detailed projections for the 2020 balances and targeting near  
6 zero balances by year-end 2021. The 2020 detailed projections  
7 reflect the Company's updated cost projections and Commission  
8 approved rates.

9  
10 **Q.** How did the Company treat clause over/under recoveries in  
11 calculating the allowance for working capital?

12  
13 **A.** The Company's PGA clause is projected to be over-recovered in  
14 2021. Consistent with Commission guidelines, the Company  
15 included over-recoveries in working capital as a reduction to  
16 rate base. The CI/BSR, energy conservation cost recovery,  
17 and competitive rate adjustment are projected to be under-  
18 recovered during 2021. In accordance with Commission  
19 guidelines, these under-recoveries were deducted from working  
20 capital as adjustments.

21  
22 **Q.** Are there any new adjustments being made to the Company's  
23 balance sheet to determine adjusted rate base?

24  
25 **A.** Yes. The Company has removed from rate base CWIP balances

1 that earn allowance for funds used during construction  
2 ("AFUDC"). On July 22, 2019, in Order No. PSC-2019-0291-PAA-  
3 GU, the Commission provided the Company with the authority to  
4 accrue AFUDC effective January 1, 2019.

5  
6 **CAPITAL STRUCTURE AND COST-OF-CAPITAL**

7 **Q.** What are the components of the Company's capital structure?

8  
9 **A.** Equity, short-term and long-term debt, customer deposits, and  
10 accumulated deferred income taxes ("ADIT") are the components  
11 in Peoples' total capital structure.

12  
13 **Q.** What is the cost-of-capital being proposed by the Company in  
14 this proceeding?

15  
16 **A.** As detailed in MFR Schedule G-3, the Company's proposed cost-  
17 of-capital is 6.63 percent. The 6.63 percent proposed cost-  
18 of-capital is based on a return on equity of 10.75 percent,  
19 which is supported in expert witness Hevert's direct  
20 testimony and investor sources' capital structure ratio of  
21 54.7 percent equity and 45.3 percent total debt. The proposed  
22 cost-of-capital also includes short-term debt costs of 2.80  
23 percent, long-term debt costs of 4.47 percent, customer  
24 deposits at a cost of 2.51 percent and ADIT at zero cost.

25

1 Q. How does the Company's proposed 54.7 percent equity ratio  
2 compare with the allowed capital structure in Peoples' 2008  
3 base rate proceeding?  
4

5 A. The proposed capital structure equity ratio of 54.7 percent  
6 is consistent with the Commission approved capital structure  
7 in Peoples last base rate proceeding.  
8

9 Q. Given the Company's proposed capital structure of 54.7  
10 percent equity, what are the equity infusions from TECO Energy  
11 for 2020 and 2021 necessary to achieve this capital Structure.  
12

13 A. The 2020 and 2021 budgeted equity infusions are \$180.0 million  
14 and \$96.0 million, respectively. These equity infusions are  
15 the result of the Company's planned capital structure needs  
16 based on its expenditures and business requirements and the  
17 targeted equity ratio of 54.7 percent. As discussed later in  
18 my direct testimony, Peoples' principal objective is to  
19 maintain its financial integrity at a level sufficient to  
20 provide access to debt capital at reasonable costs.  
21

22 Q. How did the Company determine the cost and amount of long-  
23 term debt to be included in the capital structure?  
24

25 A. The 4.47 percent cost of long-term debt reflects the actual

1 cost of outstanding notes, including the actual interest rate  
2 and monthly amortization of debt issuance costs, plus the  
3 estimated cost of forecasted long-term debt issuances in 2020  
4 and 2021. Considering the targeted equity ratio and assuming  
5 a prudent amount of short-term debt draws on the Company's  
6 credit facilities, the Company determined that long-term debt  
7 issuances of \$150.0 million in 2020 and \$150.0 million in  
8 2021 would be needed. The estimated long-term debt cost rate  
9 on the budgeted 2020 and 2021 30-year bond issuances was 4.20  
10 percent. The rate assumes that Tampa Electric Company's  
11 credit ratings are maintained.

12  
13 **Q.** How did the Company determine the short-term debt cost rate  
14 for the 2021 projected test year?

15  
16 **A.** The short-term debt cost rate of 2.80 percent in 2021 is based  
17 on the estimated cost of its credit facilities, which rates  
18 are based on London Interbank Offered Rates ("LIBOR") plus  
19 credit spreads and program fees. The short-term debt cost  
20 rate assumes that Tampa Electric's credit ratings are  
21 maintained.

22  
23 **Q.** How did you reconcile capital structure to rate base?

24  
25 **A.** The reconciliation of the 2021 projected test year rate base

1 to the 2021 projected test year capital structure is shown on  
2 Document No. 7 of my exhibit. Rate base adjustments discussed  
3 earlier require associated adjustments to capital structure  
4 to keep the two in sync.

5  
6 First, certain items are adjusted to specific capital  
7 structure items to which they are specifically related. These  
8 "specific adjustments" include unamortized debt discount and  
9 expense ("DD&E", an adjustment to long-term debt), dividends  
10 declared (an adjustment to equity), and property held for  
11 future use and non-utility adjustments to rate base (each a  
12 specific adjustment to equity). Also, there is an adjustment  
13 for other comprehensive income ("OCI") and the related  
14 deferred tax assets ("DTA") on settled hedges being reflected  
15 as long-term debt as the OCI and DTA are related to interest  
16 rate swaps on long-term debt issuances.

17  
18 Second, some items are first specifically adjusted to ADIT  
19 for direct impacts and the remainder adjusted over investor  
20 sources of capital or pro-rata over all sources of capital.  
21 Specific adjustments to ADIT are being made for the  
22 competitive rate adjustment receivable and unamortized rate  
23 case expense due to their immediate deferred income tax  
24 impacts. The CI/BSR follows this treatment because the  
25 replacement of legacy pipe is a deductible repair and

1 maintenance cost when placed in service under Internal  
2 Revenue Code Section 162.

3  
4 Third, for the net under-recovery balance related to the PGA,  
5 CI/BSR and the conservation cost recovery clause, the under-  
6 recovery was removed from short-term debt and deferred taxes  
7 because these are the components of the capital structure  
8 that are impacted by the shortfall between the clause expense  
9 incurred and the clause revenues collected.

10  
11 Fourth, as previously discussed, beginning in 2019 the  
12 Company received approval to accrue AFUDC and Peoples' CWIP  
13 on projects deemed eligible to accrue AFUDC has been excluded  
14 from rate base. The capital structure for AFUDC and CWIP was  
15 adjusted on a pro-rata basis over all sources of capital.

16  
17 Finally, the remaining items were adjusted to capital  
18 structure on a pro-rata basis over investor sources.

19  
20 **Q.** Was any capital structure adjustment to Deferred Taxes needed  
21 to comply with the Internal Revenue Code?

22  
23 **A.** Yes. There was an adjustment made to deferred income taxes  
24 in the capital structure related to the Company employing a  
25 projected test year in this rate proceeding. This adjustment

1 was a reduction to ADIT and the offset was applied to investor  
2 sources of capital on a pro-rata basis. The justification  
3 for this adjustment is described in the direct testimony of  
4 Company witness Strickland.

5  
6 **Q.** How has Peoples' treated OCI and the related DTA in the  
7 calculation of the embedded cost of long-term debt noted  
8 above?

9  
10 **A.** As noted above and summarized on MFR Schedule G-3, Page 3,  
11 the Company's embedded cost of long-term debt is 4.47 percent  
12 for the 2021 projected test year. On this schedule, the  
13 Company appropriately adjusted long-term debt balances for  
14 any unamortized debt issuing expenses as well as any  
15 unamortized debt discounts or premiums, which is standard  
16 practice for the Commission.

17  
18 In addition, the Company has reflected a small amount of  
19 remaining unamortized OCI and related DTA as an adjustment to  
20 the long-term debt balances in calculating the embedded cost  
21 of long-term debt. These balances arose from the settlement  
22 of interest rate swaps ("hedges") placed in advance of debt  
23 issuances. The remaining balances in OCI and DTA related to  
24 these hedges will be amortized into interest expense over the  
25 life of the related debt. Accordingly, for purposes of

1 calculating the embedded cost of long-term debt, the  
2 unamortized portion of OCI and DTA related to these hedges  
3 was treated as an adjustment to long-term debt in the same  
4 manner as would occur for debt issuing expenses, discounts,  
5 or premiums.

6  
7 **Q.** Do these adjustments to rate base and capital structure impact  
8 NOI?

9  
10 **A.** Yes. After all these adjustments were made, income tax  
11 expense was adjusted to reflect the appropriate amount of  
12 interest expense based on the amount and cost of debt in the  
13 capital structure that was synchronized to the rate base.

14  
15 **Q.** Did Peoples make a parent company debt adjustment as  
16 contemplated in *Rule 25-14.004 (F.A.C.)*?

17  
18 **A.** No. As discussed in Company witness Strickland's direct  
19 testimony, the Company has not included a parent company debt  
20 adjustment in determining the revenue requirement.

21  
22 **Q.** How does Peoples' 2019 historical base year cost-of-capital  
23 compare to the Commission approved cost-of-capital in  
24 Peoples' last base rate proceeding?

25

1 **A.** The cost-of-capital or average rate of return reported in the  
2 Company's December 2019 earnings surveillance report using  
3 the Commission approved midpoint of 10.75 percent return on  
4 equity was 6.61 percent, which is shown in MFR Schedule D-1,  
5 page 1. This compares to the Commission-approved average  
6 rate of return in Peoples' last base rate proceeding of 8.52  
7 percent, or a decrease of about 22.0 percent.

8  
9 **Q.** How has the Company been successful in decreasing the cost-  
10 of-capital by approximately 22.0 percent?

11  
12 **A.** First, financial management of bond issuances has resulted in  
13 the Company lowering the average long-term debt cost rate  
14 from 7.20 percent in the last base rate case proceeding to  
15 4.73 percent in 2019. This success is attributable to the  
16 Company's strong credit profile and the constructive utility  
17 regulation in Florida, which has allowed the Company to  
18 prudently access capital at very favorable interest rates.  
19 Second, since the Company's last base rate proceeding the  
20 Commission approved the reduction of customer deposit rates  
21 for residential and commercial customers to 2.0 percent and  
22 3.0 percent from 6.0 percent and 7.0 percent, respectively.  
23 Third, Peoples has significantly benefited over the last 12  
24 years from increasing the zero-cost accumulated deferred  
25 income taxes ADIT component in its adjusted capital structure

1 from 4.24 percent to 16.25 percent in 2019. As discussed in  
2 Company witness Strickland's direct testimony, accelerated  
3 tax depreciation and tax repairs deductions are the largest  
4 components of the increase in ADIT.

5  
6 **Q.** Please explain how TCJA of 2017 has impacted the ADIT balances  
7 included in the Company's capital structure?

8  
9 **A.** As indicated in Company witness Strickland's direct  
10 testimony, the TCJA eliminated bonus depreciation tax  
11 deductions. This means that the Company is producing less  
12 deferred taxes as it is now using the Modified Accelerated  
13 Cost Recovery System ("MACRS"). As mentioned above, ADIT are  
14 considered a zero-cost source of capital in Peoples' capital  
15 structure. Since the Company's rate base and capital  
16 structure are synchronized in the ratemaking process, a  
17 relative reduction in the amount of zero-cost ADIT must be  
18 made up by relatively higher amounts of debt and equity, both  
19 of which have a cost. The financial equity ratio can remain  
20 constant, but the relative reduction in the dollar amount of  
21 ADIT must be met with increased debt and equity dollar  
22 support.

23  
24 **Q.** What impact did the TCJA have on operating cash flows?  
25

1 **A.** The TCJA decreased Peoples' operating cash flows as a result  
2 of the flow back of excess deferred taxes to its customers  
3 plus the elimination of bonus depreciation for regulated  
4 utilities. The flowback of excess deferred taxes was included  
5 in Peoples' \$11.6 million rate reduction that went into effect  
6 on January 1, 2019, through Commission Order No. PSC-2018-  
7 0501-S-GU. The effect of the TCJA phase-out of bonus  
8 depreciation for regulated utilities reduced deferred taxes  
9 and increased current taxes payable, which reduces operating  
10 cash flows and adversely impacts Peoples' credit metrics.

11

12 **Q.** In summary, what overall impact did TCJA have on the Company's  
13 financial condition going forward?

14

15 **A.** The TCJA impacted Peoples' financial integrity in three ways;  
16 1) it changed Peoples' capital structure as mentioned above;  
17 2) over time it will increase the overall weighted average  
18 cost-of-capital due to the higher cost of funding Peoples'  
19 capital structure with equity and debt components; and,  
20 3) it has decreased the Company's operating cash flows.

21

22 **Q.** What credit rating is Peoples targeting in the future and  
23 why?

24

25 **A.** Peoples' financial objective is to maintain its current

1 credit ratings of "BBB+" by Standard & Poors, "A3" by Moodys  
2 Investor Services and "A" by Fitch Rating Inc. Maintaining  
3 these ratings is very important since the Company will require  
4 continued access to the capital markets, at reasonable terms,  
5 to finance its significant planned infrastructure  
6 investments. In addition, due to TCJA impacts mentioned  
7 above, a higher percentage of capital expenditure funding  
8 must come from investor sources. Maintaining the equity ratio  
9 at 54.7 percent with a midpoint ROE of 10.75 percent should  
10 produce credit ratings' parameters for the Company that  
11 support maintaining the BBB+, A3 and A ratings, respectively.  
12

13 **Q.** Please describe the pre-tax interest coverage ratios as  
14 reported in MFR Schedules G-3, page 9, and D-11.  
15

16 **A.** As shown on MFR Schedule G-3, page 9, without rate relief  
17 Peoples' the pre-tax interest coverage ratio (excluding  
18 AFUDC) in 2021 is projected to be 1.87 times. This same  
19 coverage ratio averaged approximately 5.05 times in the 2015  
20 through 2019 period, which can be seen on MFR Schedule D-11,  
21 page 1. The decline in 2021 to 1.87 times coverage ratio is  
22 driven by the revenue deficiency reflected on MFR Schedule G-  
23 5. Absent rate relief the Company's financial indicators in  
24 2021 do not support maintaining the current credit rating.  
25 As shown on MFR Schedule G-3, page 9, with rate relief the

1 pre-tax interest coverage ratio (excluding AFUDC) is 4.99  
2 times and is consistent with the 2015-2019 coverage ratios.  
3

4 **SUMMARY**

5 **Q.** Please summarize your prepared direct testimony.  
6

7 **A.** The Company has not filed for a base rate increase for 12  
8 years while improving compliance and safety metrics and  
9 achieving award winning customer satisfaction ratings. The  
10 Company has made significant infrastructure investments and  
11 added resources to achieve these improvements. The Company  
12 has also made significant reductions to its overall cost-of-  
13 capital through successfully lowering long-term debt costs  
14 and significantly increasing its funding of capital structure  
15 through accumulated deferred taxes.  
16

17 I have discussed the process and details related to budgeting  
18 the 2020 and 2021 operating and capital expenditures required  
19 to safely and reliably serve Peoples' customers and  
20 communities. Projected revenue levels, coupled with  
21 projected cost increases and the increasing demands of  
22 operating the gas distribution system, result in low  
23 forecasts for NOI and ROE. Without rate relief, the  
24 Company's ROE and financial integrity will weaken.  
25

1 For 2021, without rate relief and moving \$200.7 million of  
2 CI/BSR-related investments into rate base in this base rate  
3 proceeding, the Company's ROE would be a very low 2.01  
4 percent. This is well below the lowest point of Peoples'  
5 allowed ROE range and is unsustainable.

6  
7 Therefore, Peoples is requesting a base revenue increase of  
8 \$85.3 million or an incremental amount of \$61.7 million after  
9 considering the revenue neutral shift of \$23.6 million  
10 related to CI/BSR. The financial basis for this revenue  
11 requirement is a weighted average cost-of-capital of 6.63  
12 percent, which includes a 10.75 percent ROE and a financial  
13 equity ratio of 54.7 percent. The requested ROE and equity  
14 ratio are necessary for the Company to maintain its financial  
15 integrity and current credit ratings that provide  
16 uninterrupted access to reasonably priced debt capital.

17  
18 **Q.** Does this conclude your prepared direct testimony?

19  
20 **A.** Yes, it does.  
21  
22

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                                   **PREPARED DIRECT TESTIMONY**

3   **OF**

4   **VALERIE STRICKLAND**

5  
6                   **POSITION, QUALIFICATION, AND PURPOSE**

7           **Q.**    Please state your name, address, occupation and employer.

8  
9           **A.**    My name is Valerie Strickland. My business address is 702  
10           North Franklin Street, Tampa, Florida 33602. I am employed  
11           by Tampa Electric Company ("Tampa Electric") as the Director  
12           of Corporate Tax.

13  
14           **Q.**    Please describe your duties and responsibilities in that  
15           position.

16  
17           **A.**    As an employee of Tampa Electric, I provide U.S. tax services  
18           which are included in shared services that Tampa Electric  
19           provides to U.S. affiliates. I am responsible for the  
20           preparation and filing of all tax returns, all tax accounting  
21           for both internal and external purposes, all tax planning as  
22           well as managing all federal and state tax audits for the  
23           Emera U.S. affiliates, which include Peoples Gas System  
24           ("Peoples" or the "Company"). The only taxes I do not oversee  
25           are payroll taxes, which are the responsibility of Tampa

1 Electric's payroll department.

2  
3 **Q.** Please provide a brief outline of your educational background  
4 and business experience.

5  
6 **A.** I was educated in Europe where I received a master's degree  
7 in Accounting & Finance from the "Institute de l'  
8 Administration and Gestion" in Paris, France. Upon graduation  
9 in 1992, I joined Coopers & Lybrand LLC, an independent  
10 accounting firm, as a tax professional. In 1998, Coopers &  
11 Lybrand LLC merged with Price Waterhouse and became Price  
12 Waterhouse Coopers LLP ("PwC"). I continued to work for PwC  
13 as a Tax Manager until I joined the TECO Energy Tax department  
14 as a Manager, Corporate Tax in 2000. Since then, I have  
15 focused my attention on the preparation of U.S. federal and  
16 state income tax returns for the TECO Energy, and now the  
17 Emera, U.S. companies and have gained substantial utility tax  
18 industry knowledge and experience. I am also an active  
19 participant of both the Tax Analysis and Research  
20 Subcommittee of the Edison Electric Institute ("EEI") as well  
21 as an active participant of the EEI Taxation Committee,  
22 serving as Chair of the Committee for 2020.

23  
24 **Q.** Have you previously testified before the Florida Public  
25 Service Commission ("Commission")?

1 **A.** Yes. I have testified and filed testimony before this  
2 Commission in two dockets. The first docket was in connection  
3 with Peoples' filing for consideration of the tax impacts  
4 associated with the Tax Cuts and Jobs Act of 2017 ("TCJA")  
5 under Docket No. 20180044-GU. The second docket, Docket No  
6 20180045-EI was filed in connection with the tax impacts of  
7 the TCJA for Tampa Electric.

8  
9 **Q.** What are the purposes of your direct testimony in this  
10 proceeding?

11  
12 **A.** My prepared direct testimony covers the following areas:  
13 (1) I will testify on the computation of income tax expense  
14 and accumulated deferred income taxes ("ADIT") and the parent  
15 debt adjustment calculation set forth in the Company's  
16 Minimum Filing Requirement ("MFR") schedules.

17  
18 (2) I will also testify on the calculation of income tax  
19 expense and ADIT included in the MFRs for the 2021 projected  
20 test year, which is the test year for this proceeding. My  
21 prepared direct testimony on the 2021 projected information  
22 will address whether the 2021 projected income tax expense  
23 and ADIT have been determined using a methodology consistent  
24 with the actual 2019 income tax calculations and consistent  
25 with the 2021 projected test year cost of service. My

1 prepared direct testimony will also address how the income  
2 tax expense and ADIT calculations are consistent with the  
3 specific Internal Revenue Code ("IRC") and Income Tax  
4 Regulations covering 2021 projected test year.

5  
6 **Q.** Have you prepared an Exhibit to be introduced in this  
7 proceeding?

8  
9 **A.** Yes. Exhibit No. (VS-1) was prepared under my direction and  
10 supervision. My Exhibit consists of 2 documents, entitled:

11  
12 Document No. 1 List of Minimum Filing Requirement  
13 Schedules ("MFRs") - Sponsored  
14 Document No. 2 Calculation of IRC Required Deferred  
15 Income Tax Adjustment  
16

17 The information in the MFR schedules listed in Document No.  
18 1 of my exhibit are based on the business records of the  
19 company maintained in the ordinary course of business and are  
20 true and correct to the best of my information and belief.

21  
22 **ACCOUNTING FOR INCOME TAXES**

23 **Q.** Can you please describe how income tax expense was computed  
24 for the 2021 projected test year?

25

1 **A.** Yes. Statement 109, Accounting for Income Taxes ("FAS 109")  
2 now codified as Accounting Standards Codification 740  
3 ("ASC740") provides guidance on accounting for income taxes.  
4 There are several components to the calculation. The first  
5 component is "current" income tax expense, representing the  
6 estimated amount of current year income taxes payable based  
7 on current year taxable income. Taxable income for the year  
8 is determined in accordance with the IRC and is the amount  
9 reflected on the income tax return for the year. The IRC  
10 contains procedures for determining if and when an item is  
11 "taxable" or "deductible." The IRC rules for determining  
12 what is taxable or deductible (and therefore what is included  
13 in the tax return for the year) may differ from what is  
14 reportable as "revenue" or "expense" under Generally Accepted  
15 Accounting Principles ("GAAP"). For instance, certain  
16 expenses recorded on the financial statements under GAAP in  
17 one year may be deductible on the tax return in a different  
18 period. There are also instances where the amounts shown as  
19 deductions on the tax return in one year are not reflected on  
20 the financial statements until a later year. Differences  
21 between the book treatment and the tax return treatment of  
22 revenues and expenses result in different balances of book  
23 and tax assets and liabilities on the respective book and tax  
24 balance sheets. These differences are referred to as  
25 temporary differences.

1 Q. Provide an example of a book/tax temporary difference.

2

3 A. When a company acquires a fixed asset, that asset is  
4 depreciated for book purposes over its estimated useful life  
5 in a systematic and rational manner. Most utilities use the  
6 straight-line depreciation method to determine book  
7 depreciation expense. For income tax purposes, that same  
8 asset may be depreciated for determining taxable income on  
9 the income tax return using an accelerated method permitted  
10 under the IRC. When the annual depreciation charges for book  
11 and income-tax purposes are compared each year, there will  
12 likely be differences between the annual book and tax  
13 depreciation amounts. However, given the same capitalized  
14 asset cost, over the life of the asset total depreciation  
15 will be the same. This is because depreciation charges under  
16 both the accounting rules and the IRC are meant to "recover"  
17 the capitalized asset cost. Another example of a book/tax  
18 temporary timing difference is tax repairs. Internal Revenue  
19 Service ("IRS") guidance in 2009 effectively allowed tax  
20 expense deductions for certain repairs that were previously  
21 capitalized for tax purposes. Repairs tax deductions are  
22 pursuant to Section 162 and 263(a) of the IRC. These code  
23 sections allowed the Company to prospectively take a current  
24 tax deduction for amounts which would have been previously  
25 capitalized as plant additions for tax purposes and

1 depreciated for tax purposes. Together, tax depreciation and  
2 tax repairs' deductions are the largest book/tax timing  
3 differences of the Company.

4  
5 Another example of a temporary book/tax difference is the  
6 accrued expense recorded on the books for other post-  
7 employment benefit costs. These are not deductible for income  
8 tax return purposes until they are paid or settled. In this  
9 example, the book accrual/expense occurs in advance of the  
10 tax deduction.

11  
12 A third example is contributions in aid of construction, which  
13 are generally considered taxable when received for income tax  
14 purposes. However, for book purposes they are recorded as a  
15 reduction of the property, plant and equipment.

16  
17 **Q.** How are differences between the book treatment and income tax  
18 treatment of these types of transactions accounted for under  
19 FAS 109?

20  
21 **A.** In addition to the calculation of current tax expense (the  
22 estimated amount of income taxes included on the tax return  
23 for a particular year) FAS 109 requires a calculation of the  
24 tax expense on temporary differences. The income tax  
25 component resulting from applying the income tax rate to

1 temporary differences is known as "deferred tax expense."  
2 Because the financial statements reflect accrual accounting,  
3 the income tax expense calculation must reflect the liability  
4 for income taxes payable in the future as a result of  
5 transactions recorded in the financial statements currently.  
6 Thus, income tax expense under GAAP includes both a currently  
7 payable component as well as a deferred income tax component.  
8 In the regulated environment, the process of recording  
9 deferred income taxes on temporary differences is often  
10 referred to as "comprehensive inter-period income tax  
11 allocation" or "normalization".  
12

13 **Q.** Does the ADIT balance represent an obligation for future  
14 income taxes at the balance sheet date?  
15

16 **A.** Yes. ADIT amounts are taxes that are expected to be paid in  
17 the future based on transactions recorded in the financial  
18 statements today. The purpose of deferred income tax  
19 accounting is to reflect in the financial statements the tax  
20 effects (both current and deferred) of the assets,  
21 liabilities, revenues and expenses recorded in the financial  
22 statements. As I previously mentioned, tax repair deductions  
23 and accelerated tax depreciation create the largest timing  
24 differences. Therefore, their related ADITs are major  
25 components of the total ADIT.

1 The creation of large ADIT was the result intended by Congress  
2 when it changed the IRC to permit the use of accelerated tax  
3 depreciation in the Tax Reform Act of 1986. Congress felt  
4 that by being allowed to accelerate depreciation deductions  
5 (and thereby reduce current income tax payments), companies  
6 would lower the financing costs of their investment in capital  
7 assets more quickly and thus would be incented to incur such  
8 expenditures. Additionally, beginning in 2002 and through  
9 2017, Congress enacted a series of tax law changes to further  
10 stimulate the economy, allowing companies to deduct the  
11 eligible cost of assets placed in service, referred to as  
12 bonus depreciation, at a rate of 30 percent and up to 100  
13 percent for certain years. For accounting purposes, using up  
14 the tax basis of capital assets is both a cost to be  
15 recognized in the financial statements when claimed (deferred  
16 tax expense) and a liability for future taxes due when the  
17 turnaround occurs, and book depreciation exceeds tax  
18 depreciation

19  
20 **Q.** Are all book/tax differences "temporary differences" and  
21 simply a matter of when the item is included on the tax return  
22 versus when the item is shown on the Financial Statements?  
23

24 **A.** No. Certain items of revenue and expense are treated  
25 differently for financial reporting purposes than for income

1 tax purposes. These are referred to as permanent differences.

2  
3 An example of a permanent difference is the cost of meals and  
4 entertainment that are reported as expenses in the financial  
5 statements but, based on the IRC, are not completely  
6 deductible in determining taxable income on the income tax  
7 return. The non-deductible portion of the meals and  
8 entertainment expense would be considered a permanent  
9 difference, impacting the total tax expense recorded on the  
10 Financial Statements.

11  
12 **RATEMAKING TREATMENT OF INCOME TAXES**

13 **Q.** Has the Commission taken a position on the appropriateness of  
14 deferred income tax accounting?

15  
16 **A.** Yes. The Commission has long acknowledged that normalization  
17 is appropriate for revenues and expenses that are recognized  
18 at different times for book and tax purposes. The  
19 normalization accounting method involves (1) setting up a  
20 deferred tax reserve for the difference between depreciation  
21 expense used by regulators to determine the cost of service  
22 (normally the straight line method) and the accelerated  
23 method used for calculating the income tax on income tax  
24 returns, and then (2) drawing down that reserve in later years  
25 as the accelerated depreciation reverses. The main objective

1 of normalization is to protect future years' customers from  
2 paying abnormally high utility rates because they have to pay  
3 for both the utility's current year costs and the reversal of  
4 the tax benefits that their predecessors enjoyed. As a  
5 result, normalization results in proper allocation of tax  
6 expense between current and future customers while  
7 considering the time value of the savings resulting from  
8 deferred tax payments made as a result of book to tax timing  
9 differences. As I discussed earlier, accelerated  
10 depreciation is the major component of the total ADIT balance,  
11 which is accounted for as a zero-cost source of capital in  
12 the cost of capital computation thereby giving the benefit of  
13 reduced financing costs to ratepayers.

14  
15 **Q.** Has the Federal Energy Regulatory Commission ("FERC") taken  
16 a position on the appropriateness of deferred income tax  
17 accounting?

18  
19 **A.** Yes. FERC concluded in Orders 144 and 144A that deferred tax  
20 accounting was appropriate. FERC has required deferred tax  
21 accounting since the issuance of those orders in the 1980's.

22  
23 **Q.** Does the IRC contain requirements addressing deferred income  
24 tax accounting?

25

1 **A.** Yes. The IRC contains specific requirements that are  
2 applicable to public utility property. These requirements,  
3 in effect, mandate that in order for a public utility to be  
4 eligible to claim accelerated depreciation for income tax  
5 purposes, the regulator must permit recovery of deferred  
6 income taxes on the difference resulting from using  
7 accelerated depreciation for income tax purposes and straight  
8 line depreciation for book purposes. In other words, the use  
9 of the flow-through accounting method for the book/tax  
10 depreciation difference would cause a "normalization  
11 violation."

12

13 The penalty for violating the normalization requirements is  
14 the loss of the ability to claim accelerated depreciation for  
15 income tax purposes on all assets as of the violation date  
16 and on subsequent additions. It is a severe penalty.

17

18 **Q.** Are investment tax credits ("ITCs") applicable to Peoples for  
19 the 2021 projected test year?

20

21 **A.** No. In the Company's 2008 base rate proceeding, filed under  
22 Docket No. 20080318-GU, Peoples had an unamortized balance of  
23 \$2,047 for projected year 2009. The Company fully amortized  
24 its ITCs in 2011, therefore, there is no remaining unamortized  
25 balance showing as zero cost of capital in the 2021 projected

1 test year.

2  
3 **INCOME TAX MFRS**

4 **Q.** Is the income tax expense reflected in the 2019 historical  
5 base year and the 2021 projected test year MFRs computed  
6 appropriately?

7  
8 **A.** Yes. Federal and state income tax expenses have been  
9 correctly computed in the income statement in accordance with  
10 Generally Accepted Accounting Principles ("GAAP") and the  
11 requirements of the Commission. In addition, the computed  
12 income tax expenses for 2019, 2020 and 2021 conform with the  
13 requirements of the IRC, including the special provisions  
14 applicable to utilities.

15  
16 Peoples' income tax provision has been determined using  
17 comprehensive inter-period income tax allocation. Each  
18 dollar of revenue and each dollar of expense have inherent  
19 tax consequences. The Company's tax computation is based on  
20 the revenues and expenses associated with the provision of  
21 its regulated utility service to its Florida ratepayers. In  
22 this manner the tax expense included in the revenue  
23 requirement calculation is the appropriate tax expense  
24 reflecting the tax consequences of the costs and revenues  
25 included in the establishment of the revenue requirement.

1 **RECENT CHANGES IN TAX LAW**

2 **Q.** Have any recent changes in federal income tax laws been  
3 considered in this proceeding?

4  
5 **A.** Yes. The TCJA was enacted by the U.S. Congress on December  
6 20, 2017 and was signed into law by the President on December  
7 22, 2017. The TCJA amended the IRC and includes the most  
8 significant set of changes to the federal income tax laws  
9 since enactment of the Tax Reform Act of 1986. The TCJA made  
10 major changes in many areas of our nation's tax laws, some of  
11 which directly affect regulated utilities like Peoples.

12  
13 **Q.** What changes to the IRC in the TCJA have made the biggest  
14 impact on the Company?

15  
16 **A.** Effective January 1, 2018, the most significant changes in  
17 the TCJA to regulated utilities and their ratepayers can be  
18 summarized as follows:

19  
20 (a) The TCJA reduced the federal corporate income tax rate  
21 from 35 percent to 21 percent effective January 1, 2018.

22  
23 (b) The TCJA exempted regulated utilities from the immediate  
24 expensing of certain capital additions and applies the  
25 Modified Accelerated Cost Recovery System ("MACRS") rules to

1 regulated utility property additions, without a provision for  
2 "bonus" (accelerated) tax depreciation. Prior to TCJA,  
3 companies were allowed a 50 percent bonus depreciation  
4 deduction for assets placed in service prior to 2018. The 50  
5 percent bonus deduction was also applicable for assets placed  
6 in service in 2018 for which a binding contract was entered  
7 into before September 27, 2017. This loss of bonus tax  
8 depreciation on plant additions has a significant impact with  
9 regulated utilities now limited to MACRS, with no bonus tax  
10 depreciation, reducing the amount of available ADIT.

11  
12 (c) The TCJA exempted regulated utilities from an interest  
13 deductibility limitation.

14  
15 (d) The TCJA included normalization provisions for public  
16 utility property that requires application of the Average  
17 Rate Assumption Method ("ARAM") to the flow-back of  
18 "protected" excess deferred income taxes.

19  
20 **Q.** Please describe how the TCJA was taken in consideration for  
21 this filing.

22  
23 **A.** The Company calculated its current and deferred federal  
24 income tax expense using a federal tax rate of 21 percent.  
25 Additionally, the Company has estimated the flowback of

1           protected and unprotected excess deferred taxes in accordance  
2           with my direct testimony filed in Docket No 20180044-GU.  
3           Protected excess deferred taxes have been calculated using  
4           the ARAM and the unprotected excess deferred income taxes are  
5           being amortized using a 10-year straight line method. The  
6           ARAM flowback can vary year over year as the reversal is  
7           highly dependent on book depreciation activity. Excess tax  
8           benefits are only computed when book depreciation exceeds tax  
9           depreciation. This analysis is done on an asset-by-asset  
10          basis. If book depreciation exceeds tax depreciation on an  
11          asset, then ADIT is reversed based on the historical tax rates  
12          used to record the original ADIT.

13  
14 **Q.** Have any recent changes in state tax policy been considered  
15          in this proceeding?

16  
17 **A.** Yes. On September 12, 2019, the Florida Department of Revenue  
18          issued a Tax Information Publication ("TIP") announcing that  
19          the Florida corporate income tax rate was reduced from 5.5  
20          percent to 4.458 percent effective retroactive to January 1,  
21          2019, and continuing in effect through December 31, 2021  
22          (State Tax Rate Change). The TIP indicates that the Florida  
23          corporate income tax rate will return to 5.5 percent,  
24          effective January 1, 2022. It also indicates that further  
25          reductions in the tax rate are possible for calendar years

1 2020 and 2021. The Department of Revenue's authority to  
2 reduce the state corporate income tax rate is contained in  
3 Section 220.1105, Florida Statutes.

4  
5 **Q.** What steps has the Company taken to properly account for the  
6 impact of this state rate change?

7  
8 **A.** Effective for the reportable balance sheet date of September  
9 30, 2019, the change in the state rate was made in accordance  
10 with ASC740 and ASC980 (Accounting for regulated Operations)  
11 and Rule 25-14.013 Par (10), Florida Administrative Code  
12 ("F.A.C."). The Company remeasured its state ADIT balances  
13 and calculated the related excess ADIT balances to reflect  
14 the income tax rates expected to be in effect in the period  
15 the timing differences are expected to reverse. In this case,  
16 ASC740 and Rule 25-14.013, F.A.C., require the Company to  
17 recalculate or revalue accumulated deferred state income  
18 taxes as of December 31, 2018 arising from timing differences  
19 that are expected to reverse in calendar years 2019, 2020 and  
20 2021 at the 4.458 percent state corporate income tax rate for  
21 those years. The State Tax Rate Change is temporary and the  
22 state corporate income tax rate is expected to return to 5.5  
23 percent effective January 1, 2022, so accumulated deferred  
24 state income taxes on the Company's books as of December 31,  
25 2018, arising from timing differences that are expected to

1 reverse after December 31, 2021, need not be recalculated,  
2 because they were recorded using a 5.5 percent state income  
3 tax rate, which is the rate expected to be in effect after  
4 they reverse. Based on the current 4.458 percent state  
5 income tax rate, the amount of "excess" accumulated deferred  
6 state tax reserves (calculated based on timing differences  
7 expected to reverse in 2019, 2020 and 2021) as of December  
8 31, 2019 was estimated to be \$940,000. This amount is  
9 reflected on page 2 of MFR C-25. These excess deferred state  
10 income taxes are "unprotected". As I stated above, the lower  
11 state income tax rate that was enacted effective 2019 is  
12 temporary through 2021. Because of the known and measurable  
13 nature of the 2022 state income tax rate increase being  
14 outside the 2021 projected test year, the Company had two  
15 alternatives to address this change. The first one would be  
16 to calculate the 2021 projected test year revenue  
17 requirements using the higher state income tax rate of 5.5  
18 percent. Peoples' 2021 revenue requirement would increase,  
19 reflecting a Net Operating Income multiplier of 1.3509 as  
20 compared to the 1.3361 shown on MFR G-4, sponsored by Company  
21 witness Sean P. Hillary, and higher income taxes of  
22 approximately \$167,500. The second alternative would be to  
23 allow the Company to reverse the excess state deferred income  
24 taxes of \$940,000 in 2022, which would offset the expected  
25 incremental state tax expense at the 5.5 percent rate in 2022.

1 The Company proposes to use the second alternative as it is  
2 a fair and reasonable solution for both its customers and the  
3 Company. Therefore, the Company has reflected the temporary  
4 4.458 percent state tax rate in the 2021 revenue requirements  
5 that are discussed in the prepared direct testimony of witness  
6 Hillary.

7  
8 **IRC REQUIREMENTS FOR 2021 PROJECTED TEST YEAR**

9 **Q.** In addition to the MFR schedules relating to income tax  
10 expense, are you testifying on any other issues?

11  
12 **A.** Yes. My prepared direct testimony addresses one further  
13 adjustment that needs to be made to comply with the  
14 normalization requirements of the IRC when a projected or  
15 forecast test period is used.

16  
17 The ADIT balances on MFR Schedule G-1, page 8 are based on a  
18 13-month average of projected balances. However, the IRC  
19 requirements in this situation require a specific computation  
20 to determine the maximum amount of ADIT to be treated as zero-  
21 cost capital in the cost of capital calculation. The specific  
22 computation is shown on Document No. 2 of my exhibit as a  
23 reduction to deferred taxes in the amount of \$1,441,261, which  
24 is included in the specific adjustment of \$7,147,994 on MFR  
25 Schedule G-3, page 2. This adjustment is only required for

1 accumulated deferred income taxes recorded in Account 282,  
2 net of the FAS 109 component, because this account includes  
3 the deferred taxes governed by the ("IRS") normalization  
4 rules.

5  
6 **Q.** Please discuss the projected test year normalization  
7 requirements.

8  
9 **A.** Under United States Treasury Department Regulation ("U.S.  
10 Treasury Regulations") § 1.167(1)-1, when a projected test  
11 period is used to set rates and the newly determined rates  
12 are expected to be in effect for all or a portion of that  
13 test period, the utility plant ADIT additions in the portion  
14 of the test period in which the new rates are expected to be  
15 in effect must be pro-rated over the period for which the new  
16 rates are expected to be in effect.

17  
18 In this filing, the projected test period is the year ending  
19 December 31, 2021. Collection of the new rates is expected  
20 to start on January 1, 2021. Therefore, the new rates are  
21 expected to be in place for the entirety of the projected  
22 test year. As a result, January through December 2021 utility  
23 plant ADIT additions must be pro-rated. The projected test  
24 year utility plant ADIT additions are pro-rated using a ratio  
25 in which the numerator is the number of days remaining in the

1 projected test year, and the denominator is the number of  
2 days during which the new rates are expected to be in effect  
3 in the projected test year. Because the Company closes its  
4 books on a monthly basis, the proration is also done on a  
5 monthly basis. As a result, January 2021 ADIT additions are  
6 prorated using a ratio of 335/365, February 2021 ADIT  
7 additions are prorated by 307/365, and so on until December  
8 2021 additions are prorated by 1/365.

9

10 **Q.** How did Peoples address this requirement in determining the  
11 proper level of accumulated deferred taxes to be treated as  
12 cost free capital in the 2021 projected test year, ending  
13 December 31, 2021?

14

15 **A.** Peoples first determined the monthly projected balances for  
16 accumulated deferred income taxes for the year 2021. The  
17 monthly changes to accumulated deferred income taxes were  
18 based on the specific forecast of book and tax depreciation  
19 throughout the 2021 projected test year. These amounts were  
20 used to populate the 2021 projected test year MFRs related to  
21 monthly ADIT in accordance with the Commission's F.A.C.  
22 Rules. Month-end ADIT balances from December 2020 through  
23 December 2021 are shown on MFR Schedule G-1, pages 7 and 8,  
24 and a 13-month average is computed. The 13-month average  
25 ADIT balance is then summarized on MFR Schedule G-3, page 2.

1 As explained previously, the average ADIT balance determined  
2 in this manner does not comply with the pro rata U.S. Treasury  
3 Regulations. The U.S. Treasury Regulations require that a  
4 pro rata calculation be used to determine the maximum amount  
5 of ADIT to be treated as cost free capital in the cost of  
6 capital computation.

7  
8 Document No. 2 of my exhibit contains the required  
9 calculation. The monthly changes to ADIT were identified  
10 based on the specific forecast of book and tax depreciation  
11 throughout the 2021 projected test year.

12  
13 Next, a 13-month average of the prorated monthly change in  
14 the ADIT balances for the test period was computed. This  
15 amount was compared to the 13-month average non-prorated 2021  
16 monthly changes in the ADIT balance reflected on MFR Schedule  
17 G-1 pages 7 and 8 and MFR Schedule G-3 page 2 and an adjustment  
18 of \$1,441,261 was computed. This adjustment is reflected in  
19 the prepared direct testimony of witness Hillary and is  
20 included in his Exhibit No. (SPH-1), Document No. 7, entitled  
21 2021 Projected Test Year Reconciliation of Capital Structure  
22 to Rate. This adjustment is necessary to state the projected  
23 2021 ADIT balance, which is treated at a zero-cost capital,  
24 at the level required to comply with the forecast test period  
25 requirements as set forth in U.S. Treasury Regulation Section

1 1.167(1)-1.

2  
3 **Q.** What are the consequences if Peoples does not follow the pro  
4 rata rules of the IRS with respect to forecast test period  
5 ADIT?

6  
7 **A.** Noncompliance with the U.S. Treasury Regulations would result  
8 in a form of flow through that violates the normalization  
9 requirements of the IRC. As I explained previously, the  
10 penalty for violating the normalization requirements is the  
11 loss of the ability to claim accelerated depreciation on all  
12 public utility property.

13  
14 **PARENT DEBT ADJUSTMENT**

15 **Q.** Please describe the ownership and corporate structure of  
16 Peoples.

17  
18 **A.** Peoples is a business unit of Tampa Electric Company ("Tampa  
19 Electric") that for purposes of regulation by the Commission  
20 operates as a separate entity. Tampa Electric is a wholly  
21 owned subsidiary of TECO Energy, Inc., which in turn is a  
22 wholly owned subsidiary of Emera U.S. Holdings, Inc.  
23 ("EUSHI"). EUSHI is ultimately a wholly owned subsidiary of  
24 Emera Incorporated ("Emera"). Emera is headquartered in  
25 Halifax, Nova Scotia, Canada and is publicly traded on the

1 Toronto Stock Exchange.

2  
3 **Q.** Does Peoples participate in a consolidated income tax return  
4 with other Emera companies?

5  
6 **A.** Yes. Peoples is a member of the U.S. consolidated group owned  
7 by EUSHI and files a U.S. consolidated income tax return with  
8 EUSHI and the other subsidiaries under the EUSHI umbrella.

9  
10 **Q.** Based on the corporate structure described above, what entity  
11 did you consider for determining the parent debt adjustment?

12  
13 **A.** EUSHI. Rule 25-14.004 Effect of Parent Debt on Federal  
14 Corporate Income Tax of the F.A.C. provides that "the income  
15 tax expense of a regulated company shall be adjusted to  
16 reflect the income tax expense of the parent debt that may be  
17 invested in the equity of the subsidiary where a parent-  
18 subsidiary relationship exists and the parties to the  
19 relationship join in the filing of a consolidated income tax  
20 return". Specifically, paragraph (2) of this rule provides  
21 that "where the regulated utility is a subsidiary of tiered  
22 parents, the adjusted income tax effect of the debt of all  
23 parents invested in the equity of the subsidiary utility shall  
24 reduce the income tax expense of the utility". The Company  
25 first looked at TECO Energy, its first-tier parent, which has

1 not had any debt on its balance sheet for many years. The  
2 Company also looked at the books of EUSHI as EUSHI is the  
3 ultimate parent company which files the U.S. consolidated tax  
4 return. Since EUSHI is the highest tiered parent in the  
5 consolidated income tax return, Peoples used the capital  
6 structure of EUSHI parent for the purpose of calculating the  
7 parent debt adjustment.

8  
9 **Q.** Has Peoples made a parent debt adjustment in the 2021  
10 projected test year in accordance with Rule 25-14.004,  
11 F.A.C.?

12  
13 **A.** No.

14  
15 **Q.** Why not?

16  
17 **A.** For the 2021 projected test year, EUSHI will not have any  
18 debt on its balance sheet for which it will claim any interest  
19 expense deductions on its U.S. consolidated income tax  
20 return. In the past, EUSHI had a number of interest-bearing  
21 loans from U.S. affiliates not associated with any TECO Energy  
22 companies. These intercompany loans were restructured in 2019  
23 and early 2020 mainly for three reasons: first, these loans  
24 had reached their maturity date; second, certain tax  
25 provisions enacted under TCJA rendered the tax structure of

1 some of these loans no longer effective; and, finally, as  
2 these loans were being restructured for the reasons stated  
3 above, EUSHI's parent, Emera took the opportunity to optimize  
4 its intercompany financing transactions by centralizing the  
5 intercompany financing activities into one main financing  
6 entity owned by EUSHI. As a result, for the projected test  
7 year 2021, EUSHI parent capital structure will only consist  
8 of common and preferred equity, with no debt as disclosed on  
9 MFR C-26.

10

11 **Q.** Why did Peoples not include a parent debt adjustment over the  
12 last several years?

13

14 **A.** In Peoples' last base rate proceeding, in 2008, the capital  
15 structure of TECO Energy was used to calculate any parent  
16 debt adjustment. As previously mentioned, Peoples' parent  
17 TECO Energy has not had debt on its balance sheet for many  
18 years and as a result Peoples has not included a parent debt  
19 adjustment during that period.

20

21 **Q.** When did Emera become the owner of Tampa Electric and Peoples?

22

23 **A.** Emera acquired all the outstanding common shares of TECO  
24 Energy on July 1, 2016.

25

1 Q. How much did Emera pay to acquire the stock of TECO Energy?

2

3 A. The net cash purchase price totaled \$6.5 billion USD and the  
4 assumption of debt of \$4.2 billion USD for a total aggregate  
5 purchase price of \$10.7 billion USD. The net cash purchase  
6 price amount of \$6.5 billion USD was paid to the shareholders  
7 of TECO Energy stock as of July 1, 2016.

8

9 Q. Can you provide additional background on how Emera financed  
10 the acquisition of TECO Energy?

11

12 A. Yes. The financing of the \$6.5 billion USD purchase price  
13 was achieved by issuing a combination of debt and equity in  
14 Canada, as well as debt in the U.S. Financing in Canada was  
15 achieved via the issuance of convertible debentures (\$1.6  
16 billion USD), fixed to floating subordinated notes (\$1.2  
17 billion USD), Canadian long term debt (\$380.0 million USD),  
18 cash on hand and proceeds from the sale of assets. Financing  
19 in the U.S. was achieved by the issuance of \$3.25 billion USD  
20 long-term senior unsecured notes. The total of these sources  
21 of cash were accumulated and used to capitalize EUSHI with a  
22 combination of common and preferred equity used ultimately to  
23 acquire all of the stock of TECO Energy.

24

25 Q. Is the financing approach used by Emera commonly used by

1 Canadian companies?

2  
3 **A.** Yes. Cross border acquisitions are typically achieved with  
4 a combination of capital raised in the home country and in  
5 the country of the target company. Access to capital markets  
6 is critical in acquisition settings and debt financing is  
7 commonly used in cross border transactions when Canadian  
8 companies acquire U.S. companies as these financing  
9 strategies are set up to produce the most efficient structures  
10 and to manage foreign exchange risk.

11  
12 **SUMMARY**

13 **Q.** Please summarize your prepared direct testimony.

14  
15 **A.** The ADIT and income tax expense included in the base period  
16 and projected test year cost of service are fair and accurate  
17 based on the underlying rate base and recoverable expenses  
18 included in the cost of service.

19  
20 The 2021 projected test year MFR income-tax schedules have  
21 been presented on a basis consistent with the historical  
22 schedules and consistent with other projected information for  
23 the test period. Further, the 2021 projected test year MFR  
24 income tax amounts have been properly stated in accordance  
25 with GAAP and IRC rules. The income tax amounts have also

1           been adjusted for the amount included in Document No. 2 of my  
2           exhibit and have been calculated in accordance with the  
3           requirements of the Treasury Regulations applicable to  
4           projected test periods. Finally, in accordance with Rule 25-  
5           14.004 F.A.C., no parent company adjustment has been applied  
6           to the 2021 projected test year.

7  
8   **Q.**   Does this conclude your prepared direct testimony?

9  
10 **A.**   Yes, it does.

3   **OF**

4   **CHARLENE MCQUAID**

5  
6   **Q.**   Please state your name, address, occupation and employer.

7  
8   **A.**   My name is Charlene McQuaid. Please state your name, address,  
9           occupation and employer.

10  
11 **A.**   My name is Charlene McQuaid. My business address is 5151  
12           Terminal Road, Halifax, Nova Scotia, Canada. I am employed  
13           by Emera Inc., where I am the Vice President, Human Resources  
14           & Organizational Development. I am currently fulfilling an  
15           acting role as Vice President, Human Resources for Tampa  
16           Electric Company ("Tampa Electric") and for Peoples Gas  
17           System ("Peoples" or the "Company").

18  
19 **Q.**   Please describe your duties and responsibilities in that  
20           position.

21  
22 **A.**   I am responsible for the leadership and strategic direction  
23           of the human resources functions for Tampa Electric and  
24           Peoples. I also provide support and liaison to Human  
25           Resources at New Mexico Gas Company.

1 Q. Please provide a brief outline of your educational background  
2 and business experience.

3  
4 A. I received a Bachelor of Science in Occupational Therapy from  
5 Dalhousie University in Halifax, Nova Scotia; a Master of  
6 Science (Applied) in Occupational Health Science from McGill  
7 University in Montreal, Quebec; and a Certificate in  
8 Organizational Development Fundamentals from Queen's  
9 University in Kingston, Ontario.

10  
11 I have been employed by Emera for approximately 10 years where  
12 I have worked in a variety of Human Resources, Safety and  
13 Communications roles. My most recent executive role was at  
14 Emera Maine where I was the Vice President of HR & External  
15 Affairs. I was responsible for the HR, Safety and  
16 Communications teams and provided strategic leadership in  
17 these functions. Prior to Emera I worked primarily in  
18 manufacturing and health care, most notably for Bombardier  
19 (68,000 team members worldwide) and Maple Leaf Foods (12,500  
20 team members mostly Canadian based).

21  
22 **INTRODUCTION**

23 Q. What are the purposes of your prepared direct testimony in  
24 this proceeding?

25

1 **A.** My prepared direct testimony will show that the compensation  
2 and benefits expense in the 2021 projected test year is  
3 competitive and reasonable. The purposes of my prepared  
4 direct testimony are to explain the Company's philosophy  
5 towards compensation and benefits, as well as, describe the  
6 Company's total compensation.

7  
8 **Q.** Have you previously filed testimony before the Florida Public  
9 Service Commission ("Commission")?

10

11 **A.** No. I have not filed testimony with the Florida Public  
12 Service Commission; however, I have filed testimony with and  
13 been a sworn witness for proceedings at the Maine Public  
14 Utilities Commission with the primary focus of my testimony  
15 related to total compensation and benefits.

16

17 **Q.** Did you prepare any exhibits in support of your prepared  
18 direct testimony?

19

20 **A.** Yes. Exhibit No. (CM-1) was prepared under my direction and  
21 supervision. My Exhibit consists of 3 documents entitled:

22

23 Document No. 1 List of Minimum Filing Requirements  
24 ("MFR") - Co-sponsored

25 Document No. 2 Peoples Benefit Package Description

1 Document No. 3 Mercer - Average Annual Health Benefits  
2 Costs Per Employee for 2011-2019  
3

4 The information in the MFR schedules listed in Document No.  
5 1 of my exhibit are based on the business records of the  
6 company maintained in the ordinary course of business and are  
7 true and correct to the best of my information and belief.  
8

9 **Q.** What is the Company's basic philosophy with respect to its  
10 team members?  
11

12 **A.** At Peoples, our growth and value are driven by our team  
13 members, who are focused on meeting the needs of our  
14 customers, today and into the future. As our Code of Conduct  
15 states, our commitment is to hire and retain skilled team  
16 members who are committed to collaboration and innovation.  
17 Our team members are ready to lead in a time when our industry  
18 is changing rapidly, embracing innovations that will help the  
19 Company safely deliver the clean, affordable and reliable  
20 energy that our customers count on. We are committed to world-  
21 class safety, relentlessly focused on being safe every  
22 moment, of every day. We strive to deliver operational  
23 excellence in all that we do. And, we work hard to be  
24 recognized as trusted, reliable and innovative.  
25

1 As described in the Company's Code of Conduct, the Company  
2 achieves strategic focus to deliver growth by meeting  
3 customer demand for cleaner, affordable and reliable energy  
4 by focusing on five key principles:

- 5
- 6 • Safety, health and the environment;
- 7 • Customers;
- 8 • Integrity;
- 9 • Respect and collaboration;
- 10 • Excellence.
- 11

12 The Company believes that the principles inherent in its Code  
13 of Conduct and Leadership Competencies create an environment  
14 that respectfully engages and inspires team members. The  
15 Company's Code of Conduct establishes the foundation for team  
16 member integrity to ensure we hold ourselves to a high ethical  
17 standard. The Company's seven Leadership Competencies  
18 creates the basis for team member behavior as they develop as  
19 leaders. Our Leadership Competencies are:

- 20
- 21 1. Speaks Up on Safety, Health, and the Environment;
- 22 2. Takes Ownership and Acts with Integrity;
- 23 3. Drives Operational Excellence for Customers;
- 24 4. Builds Strong Collaborative Relationships;
- 25 5. Develops Peoples and Teams;

- 1           6.    Cultivates Innovation and Embraces Change; and
- 2           7.    Thinks Strategically and Exercises Sound Judgment.

3

4           The Company believes leadership is a mindset and that every

5           team member can be a leader in their work performance. The

6           work environment the Company creates, paired with career

7           opportunities help team members see their future at Peoples.

8           These characteristics combined with a competitive

9           compensation and benefits supports the Company in attracting

10          and retaining strong and skilled talent. The Company believes

11          that customers benefit when Peoples retain, attract, reward

12          and respect skilled and committed team members. The Company

13          believes that taking care of its team members via a

14          competitive health and benefits package contributes to their

15          safety, performance and productivity at work, thus benefiting

16          Peoples' customers.

17

18          Peoples' pay for performance model is based on total

19          compensation that aligns its team members and customer

20          interests. An effective compensation program is based on

21          market value, internal equity and affordability for Peoples'

22          customers. Further ensuring adequate portions of

23          compensation is variable or "at risk" is both competitive and

24          promotes focus on overall safety, reliability, organizational

25          performance, and other customer goals.

1 **Q.** What is the outlook for Peoples' human resource needs in 2020  
2 and 2021?

3  
4 **A.** Peoples expects its overall team member count and related  
5 expenses to grow in 2020 and 2021 as a result of its projected  
6 customer growth; enhancements in safety, safety quality  
7 assurance and damage prevention; and in response to  
8 technology advances. These additions are discussed in  
9 Company witnesses Richard F. Wall's and Timothy O'Connor's  
10 prepared direct testimonies. The projected O&M impact from  
11 adding team members in 2020 and 2021 is shown on MFR G-2  
12 sponsored by Company witness Sean P. Hillary.

13  
14 Peoples is focused on ensuring it has the right team members,  
15 with the right skills in the right roles in order to safely  
16 and reliably meet its customers' needs.

17  
18 **Q.** What are the objectives of the Company's total compensation  
19 and benefits programs?

20  
21 **A.** The Company strives to attract and retain talented people in  
22 order to meet Peoples' customer requirements, which is why  
23 the Company provides a competitive total compensation and  
24 benefits package. The Company's total compensation and  
25 benefits programs include: Base salary, short and where

1 applicable, long-term incentive plans, pension/401k, paid  
2 time off programs, Employee Common Share Purchase Plan and  
3 benefits plans. Peoples strongly believes that having a  
4 highly motivated work force results in team members who  
5 reflect the values of the Company. Peoples' skilled and  
6 experienced team excels in every aspect of the Company's  
7 operations. Peoples also believes that such a workforce  
8 contributes to the Company's excellent customer service.

9  
10 **Q.** Are the Company's total compensation and benefits costs  
11 reasonable?

12  
13 **A.** Yes. As noted below in more detail the Company benchmarks  
14 its total compensation and benefits costs against applicable  
15 markets using relevant utility benchmarks for both  
16 compensation and benefits.

17  
18 **COMPENSATION**

19 **Q.** What is the Company's compensation philosophy?

20  
21 **A.** Peoples recognizes that a competitive pay program is a  
22 critical component of an team member's total compensation and  
23 enables the Company to attract and retain skilled team  
24 members. Peoples' considers total direct compensation in  
25 evaluating the competitiveness of its pay program, which

1 includes, base salary and variable short-term and long-term  
2 incentive pay. Peoples total compensation program is  
3 structured to be aligned with the middle of the market.  
4 Peoples uses Total Direct Compensation ("TDC") in  
5 understanding the market. TDC references three components of  
6 team member compensation being base salary, short term  
7 incentive plans ("STIP") and long-term incentive plans  
8 ("LTIP") and how this compares to market. All three  
9 components are important to ensure the company's team members  
10 receive competitive compensation, thus allowing the Company  
11 to attract and retain talented people. The Company assess  
12 it's compensation program against the market utilizing data  
13 from the U.S. Mercer Benchmark data base and the Willis Tower  
14 Watson MMPS Survey. After the 2020 merit process, Peoples'  
15 total compensation was at 99 percent of the middle of the  
16 market.

17  
18 **Q.** Please describe the components of compensation in more  
19 detail.

20  
21 **A.** Base salary is the cash compensation team members regularly  
22 receive in their paychecks. All Company team members receive  
23 a base salary or hourly wage. Certain job classifications  
24 are eligible for overtime and/or shift differential pay. All  
25 team members are eligible for STIP, and generally directors

1 and above are eligible for LTIP.

2  
3 The Company's STIP compensates team members for the  
4 achievement of annual Company objectives. The objectives for  
5 STIP center around performance in Safety, People, Customer,  
6 Asset Management and Financial. The Company's objectives in  
7 each of these areas is focused on:

- 8
- 9 1. Safety: Achieve World Class Safety by developing a  
10 culture of safety leadership and a reduction in serious  
11 injuries.
  - 12 2. People: Develop the Company's human capabilities to  
13 shape and achieve its strategic vision. The Company  
14 does this by building team member commitment,  
15 standardizing work processes, and developing team  
16 members and leaders.
  - 17 3. Customer Experience: Provide outstanding Customer  
18 Service in ways that results in customer loyalty and  
19 dedication by reaching high customer satisfaction levels  
20 as measured by multiple key customer service metrics.
  - 21 4. Asset Management: Realize high operating performance  
22 with a continued focus on safety, compliance and  
23 strategic growth.
  - 24 5. Financial: Achieve solid financial objectives and  
25 effective cash flow management.

1 Achieving the STIP objectives is intended to benefit  
2 customers, directly and indirectly. The Company has two  
3 different types of STIPs. The first STIP objective is for  
4 managers and above, called a Balanced Scorecard ("BSC"). The  
5 second STIP objective is called Performance Sharing Program  
6 ("PSP"), which is for supervisors and below.

7  
8 The Company's LTIP is meant to be a key senior leadership  
9 compensation and retention program. The purpose of the LTIP  
10 is to align senior leaders' long-term incentive pay with the  
11 corporate and shareholder goals. As stated above, it is an  
12 important component of a competitive total compensation  
13 program for senior leaders. As with base pay and STIP, LTIP  
14 for senior leaders allows Peoples to attract and retain  
15 skilled leaders.

16  
17 **Q.** What are the projected merit increases for 2020 and 2021?

18  
19 **A.** Merit increases for 2020 and 2021 are projected to be 3  
20 percent each year.

21  
22 **Q.** What is the Company's projected STIP cost for 2021, as  
23 compared to the 2019 historic base year?

24  
25 **A.** As discussed in Company witness Hillary's prepared direct

1 testimony, in 2019, the net income goal was exceeded resulting  
2 in additional incentive compensation to team members. The  
3 total 2019 historic base year's short-term incentive  
4 compensation expense was approximately \$5.0 million. The  
5 2021 projected test year's short-term incentive compensation  
6 budget of \$4.5 million does not assume that the target goals  
7 are exceeded. Therefore, a decrease is assumed from the 2019  
8 historic base year to the 2021 projected test year.

9

10 **Q.** What is the Company's projected LTIP cost for the 2021  
11 projected test year as compared to 2019 historic base year?

12

13 **A.** As discussed in Company witness Hillary's prepared direct  
14 testimony, the LTIP cost in the 2021 projected test year is  
15 approximately \$1.56 million, as compared to \$1.96 million in  
16 the 2019 historic base year. The actual 2019 LTIP cost and  
17 payout was higher in 2019 due to exceeding the LTIP  
18 measurement objectives in 2019. The 2021 budget assumes the  
19 LTIP objectives are not exceeded.

20

21 **Q.** Describe the Company's annual merit process.

22

23 **A.** The Company's annual merit process is designed to provide  
24 team members an opportunity to earn an increase in their total  
25 direct compensation ("TDC") in order to recognize performance

1 and remain competitive with the market. This merit process  
2 is closely tied to the talent management process, which  
3 results in an overall team member performance assessment  
4 annually. Each year team members establish goals and reaffirm  
5 position accountabilities with their performance coach. The  
6 team member goals are aligned with the Company's annual  
7 objectives, as set out in the Company's STIP programs. The  
8 position accountabilities are aligned with the team member's  
9 specific role functions. Leadership Competencies are also  
10 assessed during the review process. A team member's overall  
11 assessment is rated on a five-point scale based on  
12 expectations (Significantly Exceeds; Exceeds Many, Fully  
13 Meets, Meets Most; Does Not Meet). Team Member's overall  
14 performance rating is directly related to the percentage of  
15 their merit increase. Following the year-end performance  
16 review, the performance coach recommends an appropriate merit  
17 adjustment for each non-covered/non-union team member based  
18 on performance, TDC compa-ratios and budget. These  
19 recommendations are approved by each higher level of  
20 leadership, eventually through to the officer level.

21  
22 **BENEFITS**

23 **Q.** Describe the Company's benefits package.

24  
25 **A.** The Company's benefits package is designed to maintain a

1 competitive position within the market in order to attract,  
2 retain, and develop competent and qualified team members.  
3 These comprehensive benefits include: consumer driven health  
4 plans, pharmacy plans, employee family assistance plans,  
5 dental and vision plans, flexible benefits plans (Healthcare  
6 FSA, Dependent Care FSA and Transportation and Parking FSA),  
7 life insurance (basic, supplemental, spousal and child),  
8 long-term care insurance, group retirement plans, long-term  
9 disability, and retiree medical. Exhibit No. (CM-1) Document  
10 2 shows a more detailed description of these plans.

11  
12 **Q.** What is the Company's gross benefits cost for the 2021  
13 projected test year as compared to the 2019 historic base  
14 year?

15  
16 **A.** Peoples' total gross benefits cost is projected to be  
17 approximately \$13.9 million in 2021, as compared to  
18 approximately \$13.1 million in 2019.

19  
20 **Q.** How does the gross benefits costs compare with the amounts  
21 the Company has included in O&M FERC account 926 Pension and  
22 Benefits?

23  
24 **A.** As stated in Company witness Hillary's prepared direct  
25 testimony, Peoples' pension and benefits cost in O&M FERC

1 account 926 is projected to be approximately \$10.9 million in  
2 2021 as compared to \$10.5 million in 2019. Also noted in  
3 Company witness Hillary's prepared direct testimony, a  
4 portion of benefits costs are capitalized with labor or are  
5 clause recoverable, therefore the amount in FERC account 926  
6 is lower than the gross benefits costs.

7  
8 **HEALTHCARE BENEFITS**

9 **Q.** What factors are driving healthcare costs in the U.S.?  
10

11 **A.** The main drivers of increased medical cost in the U.S. are  
12 inflation in unit prices, increases in the utilization of  
13 services (primarily due to population aging and the overall  
14 deterioration of the health of U.S. citizens), and advances  
15 in technology/treatment protocols causing a rise in the  
16 frequency and cost level of high cost claimants. The cost  
17 drivers for prescription drugs are similar, with specialty  
18 drugs representing a disproportionately higher percentage of  
19 the cost increases than non-specialty drugs. As with U.S.  
20 health care costs, Peoples is noting a substantial increase  
21 in projected costs in 2021 aligned with those factors listed  
22 above contributing to the Company's increase in cost.

23  
24 **Q.** What are the Company's healthcare cost for the 2021 projected  
25 test year?

1 **A.** As discussed in Company witness Hillary's direct testimony,  
2 the Peoples' 2021 budgeted healthcare costs for active team  
3 members, including medical and dental expenses, is \$7.8  
4 million as compared to \$6.6 million in 2019. The Company  
5 received an actuarial estimate from Mercer that supported  
6 this cost.

7  
8 The Company also provides post-retirement healthcare benefits  
9 and records expenses based on actuarial calculations, similar  
10 to pension expense. The 2021 budget of approximately \$882,000  
11 was based on the Mercer's actuarial projection. The 2019  
12 post-retirement expense was approximately \$843,000.

13  
14 **Q.** How does the Company evaluate the design and cost of its  
15 health care programs?

16  
17 The Company retained Mercer Health Benefits who uses  
18 underwriting techniques, based on actuarial guidelines, to  
19 project the future plans costs for the self-funded plans.  
20 The key factor in projecting future results is the prior  
21 experience of a group, especially when the group consists of  
22 a large population. The process of forecasting past claims  
23 experience into the future considers plan designs, member  
24 demographics, trends and group credibility. These processes  
25 are widely accepted within the insurance market as the

1 standard to establishing budget and premium levels that are  
2 appropriate to cover future risks.

3  
4 **Q.** How does the Company's healthcare plan compare to industry  
5 standards?

6  
7 **A.** Document No. 3 of my exhibit entitled Mercer - Average annual  
8 health benefits costs per employee for 2011-2019 demonstrates  
9 that Peoples' costs during this period were lower than  
10 industry experience, except in 2018, where it was aligned  
11 with the benchmark. According to Blue Cross Blue Shield  
12 ("BCBS"), in 2019 Peoples was at or slightly below health  
13 benchmarks overall but the factors that push the Company's  
14 costs upward are, high cost claims, inpatient services and  
15 specialty drugs. The benchmark consists of BCBS book of  
16 business for National Alliance Platform that includes  
17 approximately 1.5 million lives.

18  
19 **Q.** What specific initiatives has Peoples pursued to ensure its  
20 healthcare costs are reasonable?

21  
22 **A.** In partnerships with industry experts such as Mercer, BCBS  
23 and others the Company has put the following initiatives in  
24 place in order to ensure its healthcare costs are reasonable:  
25

- 1 1. Implemented a pricing strategy to encourage cost-  
2 effective plan selections;
- 3 2. Reviewed and increased monthly team member contributions  
4 annually;
- 5 3. Promoted team member and retiree awareness and education  
6 around healthcare consumerism;
- 7 4. Implemented Personal Care Connections, which is a  
8 comprehensive, high touch, disease management program,  
9 including health coaching, to facilitate the effective  
10 medical treatment of plan participants with specific  
11 diseases that, if not properly managed, can generate  
12 expensive claim costs;
- 13 5. Implemented "Rally", a digital health platform which  
14 promotes overall health and wellness and offers rewards  
15 for meeting wellness goals;
- 16 6. Conducted vendor analyses and determined moving to Blue  
17 Cross Blue Shield from Aetna would result in cost  
18 containment from network discounts, network breadth,  
19 premium holidays, and implementation/wellness credits;
- 20 7. Performed a prescription coverage collective financial  
21 review, confirming current vendor offered the most  
22 competitive pricing;
- 23 8. Restructured prescription program to require 90-day  
24 fills by using retail Smart90 pharmacy or home delivery  
25 for long-term maintenance medications;

- 1           9.    Implemented a Telehealth benefit for medical and  
2           dermatology, which is less expensive than the average  
3           office visits alternative;
- 4           10.  Negotiated a Medicare Advantage renewal decrease with no  
5           plan changes; this resulted in a significant annual  
6           savings for both the Company and plan participants;
- 7           11.  Procured stop loss insurance coverage for 2020 to limit  
8           annual medical claim amounts to \$300,000 annually per  
9           covered plan member; and
- 10          12.  Implemented the Peoples' Industrial Athlete program that  
11          provides overall wellness and injury prevention  
12          initiatives through partnership with an external health  
13          professional group.        This effort has reduced  
14          musculoskeletal injuries and enhanced wellness across  
15          Peoples.

16  
17   **PENSION AND RETIREMENT SAVINGS BENEFITS**

18   **Q.**    Please describe the pension and retirement savings plans and  
19          how they compare to industry standards?

20  
21   **A.**    Peoples' team members participate in the following  
22          retirement plans:

- 23          1.    TECO Energy Group Retirement Plan (a qualified defined  
24          benefit pension plan)
- 25          2.    TECO Energy Group Retirement Savings Plan (a qualified

1 defined contribution 401(k) plan)

2 3. TECO Energy Group Benefit Restoration Plan (a non-  
3 qualified defined benefit pension plan)

4 4. TECO Energy Group Postretirement Health and Welfare Plan  
5 (a retiree medical plan)

6  
7 The Company uses an independent consultant, Mercer, to  
8 evaluate the competitive positioning of the qualified pension  
9 and savings plans. Mercer's database includes detailed plan  
10 data for over 1,100 companies, including the Fortune 500 as  
11 well as smaller companies with revenues ranging from \$5.0  
12 million to \$1.5 billion and is compiled solely from publicly  
13 available information. Of the 58 utilities in the database,  
14 28 percent provide a defined benefit ("DB") plan to new hires  
15 while 72 percent provide only a defined contribution ("DC")  
16 plan. Of the plans that are offered today, the value of the  
17 combined DB and DC program, 9.9 percent of pay, is at the  
18 50th percentile of all 58 companies in the database.

19  
20 **Q.** What is the Company's retirement expense for pension and  
21 retirement savings in the 2021 projected test year?

22  
23 **A.** The total retirement expense for pension in the 2021 projected  
24 test year is \$2.0 million. This includes \$1.7 million for  
25 the Retirement Plan, \$127,000 for the Supplemental Executive

1 Retirement Plan and \$133,000 for the Restoration Plan. These  
2 projected pension expenses are included in FERC account 926  
3 and MFR G-2.  
4

5 **Q.** Is it common to use an independent actuarial firm to compute  
6 pension and post-retirement benefit costs?  
7

8 **A.** Yes. Based on the benefits provided and employee  
9 demographics, an actuary for a defined benefit plan estimates  
10 the value of employer obligations. The calculation of  
11 liabilities considers a number of complex variables including  
12 expected future compensation increases, asset returns, rates  
13 of retirement, disability, death and other reasons for  
14 termination. Actuaries use historical data and future  
15 expectations to make assumptions for these variables.  
16 Actuaries for defined benefit plans also ensure the employer  
17 is following laws and regulations regarding pension plans.  
18 This includes the timely certification of minimum  
19 contributions and the funded status under The Employee  
20 Retirement Income Security Act of 1974 (ERISA). As there are  
21 extensive variables and regulations to consider, it is common  
22 and often necessary, for companies to engage actuarial firms  
23 to compute pension and post-retirement benefit costs.  
24

25 **Q.** Do the actuarial assumptions and methods provide a reasonable

1 basis for determining the level of pension costs to be  
2 included in the Company's operating cost?

3  
4 **A.** Yes. The actuarial assumptions and methods used for the  
5 pension valuation are reasonable both individually and in the  
6 aggregate.

7  
8 **SUMMARY**

9 **Q.** Please summarize your prepared direct testimony.

10  
11 **A.** Peoples' total compensation package is reasonable and  
12 benefits customers by ensuring we are able to attract and  
13 retain skilled, talented and customer-focused team members  
14 that safely deliver reliable service for our customers.  
15 Peoples' pay program is structured to pay at the middle of  
16 the marketplace and is based on total direct compensation.  
17 Additionally, the Company's benefits and retirement programs  
18 are reasonable and competitive and allow the Company to retain  
19 and attract high quality team members who are committed to  
20 safely and reliably providing excellent, high quality natural  
21 gas service to Peoples' customers.

22  
23 **Q.** Does this conclude your prepared direct testimony?

24  
25 **A.** Yes.

1                   (Whereupon, prefiled direct testimony of  
2 Lorraine L. Cifuentes was inserted.)

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**2                                   **PREPARED DIRECT TESTIMONY**3   **OF**4   **LORRAINE L. CIFUENTES**5  
6   **Q.**   Please state your name, address, occupation and employer.7  
8   **A.**   My name is Lorraine L. Cifuentes. My business address is 702  
9           North Franklin Street, Tampa, Florida 33602. I am employed  
10          by Tampa Electric Company ("Tampa Electric") as the Director  
11          of Load Research and Forecasting.12  
13   **Q.**   Please describe your duties and responsibilities in that  
14          position.15  
16   **A.**   As an employee of Tampa Electric, I provide load research and  
17          forecasting services which are included in shared services  
18          that Tampa Electric provides to U.S. affiliates. My present  
19          responsibilities include leading the development of the  
20          customer, energy consumption and base revenue projections for  
21          both Peoples Gas System ("Peoples" or the "Company") and Tampa  
22          Electric, as well as, management of Tampa Electric's load  
23          research program and other related activities.24  
25   **Q.**   Please provide a brief outline of your educational background

1 and business experience.

2  
3 **A.** In 1986, I received a Bachelor of Science degree in Management  
4 Information Systems from the University of South Florida. In  
5 1992, I received a Master of Business Administration degree  
6 from the University of Tampa.

7  
8 In October 1987, I joined Tampa Electric as a Generation  
9 Planning Technician, and I have held various positions within  
10 the areas of Generation Planning, Load Forecasting and Load  
11 Research. In October 2002, I was promoted to Manager, Load  
12 Research and Forecasting. In November 2018, I was promoted  
13 to Director, Load Research and Forecasting.

14  
15 **Q.** What are the purposes of your prepared direct testimony in  
16 this proceeding?

17  
18 **A.** The purposes of my prepared direct testimony are to describe  
19 Peoples' forecasting process, describe the methodologies and  
20 assumptions and present the customer, their consumption and  
21 base revenue forecasts for the residential rate classes  
22 (which specifically include the RS1-3, RGS1-3 and RS-SG  
23 rates) and the small commercial rate classes (which  
24 specifically include the SGS, GS1-GS3 rates) used in Peoples'  
25 2021 projected test year forecast that supports its request

1 for a base rate increase.

2

3 **Q.** Did you prepare any exhibits in support of your prepared  
4 direct testimony?

5

6 **A.** Yes. Exhibit No. (LLC-1) was prepared under my direction and  
7 supervision. My Exhibit consists of seven Documents,  
8 entitled:

9

10 Document No. 1 List of Minimum Filing Requirement  
11 Schedules ("MFRs") - Sponsored and Co-  
12 Sponsored by Lorraine L. Cifuentes

13 Document No. 2 Historical and Forecasted Residential and  
14 Small Commercial Customers

15 Document No. 3 Historical and Forecasted Residential and  
16 Small Commercial Average Usage

17 Document No. 4 Historical and Forecasted Residential and  
18 Small Commercial Therms

19 Document No. 5 Historical and Forecasted Service Line  
20 Capital Expenditures

21 Document No. 6 Historical and Forecasted Heating and  
22 Cooling Degree-Days

23 Document No. 7 2017-2021 Total Customers, Therms and Base  
24 Revenues

25

1 The information in the MFR schedules listed in Document No.  
2 1 of my exhibit are based on the business records of the  
3 company maintained in the ordinary course of business and are  
4 true and correct to the best of my information and belief.

5  
6 **SUMMARY OF FORECAST RESULTS**

7 **Q.** Please summarize your forecast results.

8  
9 **A.** The Company expects residential customers to grow by 7.0  
10 percent (25,336 customers) from 2019 to 2021. The Company  
11 expects residential therm sales for the same period to  
12 increase by 13 percent, the higher increase a result of the  
13 milder weather in 2019.

14  
15 The Company expects small commercial customer growth over the  
16 next two years (2019 to 2021) to be 4.7 percent (1,675  
17 customers). The Company expects small commercial rate therm  
18 sales over the same period to increase by 6.6 percent. See  
19 Exhibit No. (LLC-1), Document Nos. 2 through 4.

20  
21 In regard to large commercial and industrial customers, the  
22 Company has specifically forecasted customer additions and  
23 usage at the customer level. The inputs received in that  
24 process are described later in my prepared direct testimony.

25

1 Q. Please explain the Company's experience with customer growth  
2 since the last rate proceeding that was filed in 2008.

3  
4 A. The last base rate proceeding was during a period of unusual  
5 uncertainty and economic disruption due to the "Great  
6 Recession". Residential customer growth was impacted the  
7 most by this downturn. Residential customer growth was flat  
8 to declining during 2009 and 2010, compared to four and five  
9 percent customer growth prior to this. In 2011, the Company  
10 started experiencing growth again but below one percent a  
11 year. In 2012, growth began to exceed one percent a year.  
12 By 2015, residential growth was exceeding two percent a year  
13 and in 2018 exceeded three percent a year and is projected to  
14 remain above three percent a year through to the 2021  
15 projected test year.

16  
17 In short, customer growth and consumption have changed from  
18 historical levels and the load growth the Company expects  
19 will be higher than the historical averages.

20  
21 The process Peoples uses to prepare its forecasts and the  
22 steps it has taken to ensure the forecast is reasonable are  
23 discussed below in my direct testimony.

24  
25 **PEOPLES' FORECASTING PROCESS**

1 Q. Please describe how Peoples' customer and therm forecasts are  
2 developed.

3  
4 A. Peoples' forecast process is a joint effort between Peoples'  
5 and Tampa Electric's Load Forecasting team, as well as many  
6 other behind the scenes participants.

7  
8 The Company has 14 service areas throughout Florida. Each of  
9 these service areas are forecasted individually and then  
10 aggregated to get total company level forecasts. The forecast  
11 process has two tracks of work which go on simultaneously.  
12 One track is specific to the residential and small commercial  
13 rate classes and the second track is for the higher usage  
14 commercial and industrial customers which are forecasted  
15 individually.

16  
17 TRACK ONE: This track is based on regression modeling  
18 techniques and is done by Tampa Electric's Load Forecasting  
19 team. Regression models estimate the mathematical  
20 relationships between two or more variables (e.g. dependent  
21 variable and independent variables) and applies this  
22 relationship to predict future values of the dependent  
23 variable. This process is used to forecast Residential and  
24 Small Commercial rate class customers and therm consumption.  
25 The Residential class consists of Residential Service (RS)

1 rates 1-3 and Residential General Service (RGS) 1-3 rates.  
2 The Small Commercial class consists of Small General Service  
3 (SGS) and General Service (GS) 1-3 rates.  
4

5 The first step in the forecast process is to obtain a clear  
6 understanding of the data to be forecasted (the dependent  
7 variable) and the variables that have an impact on the data  
8 (independent variables). The primary areas reviewed include  
9 recent trends in customer growth, usage patterns and weather  
10 for each service area. Customer (bill) counts and consumption  
11 (therms) data for each service area are collected from the  
12 Company's billing system. The billing data and weather, in  
13 terms of degree-days, for each service area is reviewed to  
14 determine if any abnormal events (e.g. the hurricane that  
15 impacted Panama City in 2018) occurred that affected  
16 customers and/or therm consumption. Any data anomalies are  
17 investigated and action plans are developed to appropriately  
18 address them during the modeling process.  
19

20 The second step is a detailed analysis of the major  
21 assumptions used in the forecast process. Each assumption  
22 is reviewed by the Load Forecasting department for  
23 reasonableness and consistency with recent trends.  
24

25 At this point in the process, the data and assumptions are

1 ready to import into Itron's MetrixND forecasting software,  
2 an industry accepted, advanced statistics program for  
3 regression analysis and forecasting. Peoples' retail  
4 customers and their forecasts are the result of a 56  
5 regression equation model.

6  
7 The customer model is a twenty-eight equation model made up  
8 of 14 service area regression models for the residential  
9 class and 14 service area regression models for the small  
10 commercial class. Typically, the number of customers over  
11 the past 10 years is the dependent variable. The primary  
12 independent variables, also known as explanatory variables,  
13 are capital expenditures associated with new service lines,  
14 and/or trend variables. In addition, binary variables (as  
15 defined below) are used to adjust for anomalies or  
16 seasonality.

17  
18 The therms-per-customer model is also a twenty-eight equation  
19 model made up of 14 service area residential and 14 service  
20 area small commercial regression models. These average use  
21 (Therm-per-Customer) regressions are developed similarly to  
22 the customer models with the primary explanatory variables  
23 being heating and/or cooling degree-days which explain the  
24 historical monthly weather variability.

25

1 Next, the model coefficients are estimated for the 56  
2 regression equations and the common statistical measures of  
3 validity and reasonableness are analyzed and evaluated.  
4

5 To derive the residential and small commercial total therm  
6 forecasts for each service area, the 28 customer model  
7 results and the 28 therm-per-customer model results are  
8 multiplied, resulting in total therms.  
9

10 TRACK TWO: This track is a joint effort by Peoples'  
11 Business Development and Accounting departments. The  
12 forecasts developed in track two do not require regression  
13 techniques. Since the number of customers are not very  
14 large, these forecasts are developed on an individual  
15 customer basis. The rates classes being forecasted are the  
16 larger commercial and industrial rates (GS4, GS5, WHS, SIS,  
17 IS and ISLV, Special Contracts and Off-System Sales). These  
18 forecasts are based on an analysis of recent customer usage  
19 trends and input from customers when necessary. The  
20 Commercial Standby-by Generator (CSG), Natural Gas Vehicle  
21 Service (NGVS) and Commercial Street Light Service (CSLS)  
22 rates are forecasted based on recent historical usage. In  
23 addition, new customers, therms and revenue projections for  
24 known or expected projects are layered in the forecast.  
25

1 Q. Which rate classes in this process are you responsible for?

2

3 A. I am responsible for the rate classes in track one of this  
4 process. The residential rates and the small commercial rates  
5 are listed above.

6

7 Q. Does Peoples assess the appropriateness and reasonableness of  
8 these forecasting models?

9

10 A. Yes. A variety of measures and criteria are used to ensure  
11 the reasonableness of the model equations and results.  
12 Measures of statistical fit and significance are reviewed for  
13 each model. Some of the measures reviewed include R-squared,  
14 T-Statistic, Mean Absolute Percent Error (MAPE) and Durbin-  
15 Watson Statistic. After reviewing these statistics, the  
16 models were found to be theoretically sound with excellent  
17 model statistics indicating that the predictability of the  
18 model is sound.

19

20 Q. Please explain why capital expenditures for new service lines  
21 are used as the primary explanatory variable in the customer  
22 models?

23

24 A. Prior to 2018, Peoples used population growth as the primary  
25 explanatory variable in predicting residential customer

1 growth. In 2016, spending on new service lines began to  
2 increase over historical levels and customer growth also  
3 began getting stronger. At that time, it was noted that  
4 capital spending on service lines had a stronger correlation  
5 than population to Peoples growth in residential customers.  
6 This correlation makes sense given that the installation of  
7 the service line is often the final step before a customer  
8 comes on line. Capital expenditures for new service lines  
9 were used as the primary explanatory variable in the customer  
10 models because it has the most immediate revenue producing  
11 impact since it is a direct link to when a new customer is  
12 being added to the system. The strong correlation that exists  
13 between customer growth and service line spending is evident  
14 in the model statistics, this supports that using capital  
15 expenditures for new service lines as the explanatory  
16 variable in the customer models is appropriate and  
17 reasonable.

18  
19 **Q.** Where are the service line capital expenditure assumptions  
20 inputs developed and how are they used in the revenue  
21 forecast?

22  
23 **A.** The projected annual service line capital expenditures are  
24 developed and provided to the Load Forecasting department by  
25 Peoples Business Planning department. Next, the Load

1 Forecasting department accumulates capital expenditures, in  
2 real terms, over a period of time. Since the Company's  
3 regression models forecast total customers versus annual  
4 incremental customers, the explanatory variable must also  
5 represent total expenditures spent through time versus just  
6 the annual incremental expenditure. See my Exhibit No. (LLC-  
7 1), Document No. 5 for historical and projected Capital  
8 Expenditures for Service Lines.

9  
10 **Q.** How were the degree-day assumptions used in the therm-per-  
11 customer models developed?

12  
13 **A.** Since future weather is unknown, a normalized, or average,  
14 weather pattern is assumed and used over the forecast horizon.  
15 Degree-day assumptions are based on average weather patterns  
16 over the past 20 years, excluding outliers and anomalies.  
17 Outliers and anomalies are statistically identified as any  
18 month where the heating or cooling degree-day value is above  
19 or below two standard deviations from the mean. Each service  
20 area's degree-days are analyzed to develop its normal weather  
21 assumptions. AccuWeather is the source for each service  
22 area's daily temperatures that are used to calculate degree-  
23 days. See my Exhibit No. (LLC-1), Document No. 6 for weighted  
24 average heating and cooling degree-days.

25

1 Q. Please explain what trend and binary variables are.

2  
3 A. A trend variable is a time-trend which increments by 1 through  
4 time. It is used to capture changes or trends that are not  
5 explained by the other independent variables. For a service  
6 area that does not correlate well with the capital expenditure  
7 variable, a trend variable will be substituted. It can also  
8 be used in addition to the capital expenditure variable.

9  
10 Binary variables are used to indicate the absence or presence  
11 of some effect that may shift the outcome, they simply take  
12 on a value of 0 or 1. In the customer models, binary variables  
13 are used to get a different coefficient for each month to  
14 capture seasonality that other variables do not capture. For  
15 example, customer counts fluctuate throughout the year due to  
16 temporary residency related to vacation homes or seasonal  
17 jobs, the binary variables capture these trends. In addition,  
18 a binary variable is used to isolate one-time events such as  
19 hurricane outages so that the event does not impact the  
20 outcome of the other explanatory variables. Binary variables  
21 are also used when there is a structural change in the data  
22 series being forecasted. For example, if the boundaries of  
23 two adjacent service area are redefined, the drop in customer  
24 counts for one service area and increase in customers for the  
25 other service area can be captured with a binary variable

1 ("0" before the change and "1" after the change). This  
2 variable captures the one-time shift without impacting the  
3 other explanatory variables.

4  
5 **Q.** Does Peoples assess the reasonableness of these base  
6 assumptions?

7  
8 **A.** Yes. The base case assumptions of capital expenditures for  
9 service lines and the assumptions of degree-days have been  
10 evaluated for reasonableness by reviewing the statistical  
11 significance of each assumption. In addition, backcasting of  
12 each customer model was done to assess the reasonableness of  
13 the assumption's and the models' ability to predict the past  
14 two years. The models and assumptions provided reasonable  
15 predictions of the past two years.

16  
17 **PEOPLES' S FORECASTED TOTAL GROWTH**

18 **Q.** What is Peoples' 12 month average customer base in 2019?

19  
20 **A.** Peoples' 12 month average in 2019 for customers is 398,492.

21  
22 **Q.** What is Peoples' projected total customer growth over 2020  
23 and 2021?

24  
25 **A.** Peoples is projecting an increase of 27,016 net new customers

1 over the next two years (2019 to 2021). See my Exhibit No.  
2 (LLC-1), Document No. 7 for projected number of customers by  
3 class.

4  
5 **Q.** What is Peoples' total therm sales forecast for the 2021  
6 projected test year?

7  
8 **A.** The Company expects total therm sales to be approximately  
9 2,282,200,000 in the 2021 projected test year. Forecasted  
10 total therm sales are shown in my Exhibit No. (LLC-1),  
11 Document No. 7.

12  
13 **Q.** Does Peoples' make adjustments to the regression models'  
14 forecasts?

15  
16 **A.** Yes, customers and therms are exogenously added for new  
17 residential developments in Daytona and Panama City as well  
18 as for residential and commercial gas heat pumps. In  
19 addition, the large commercial and industrial forecasts  
20 incorporate growth for known or expected projects. These  
21 adjustments are provided to the Load Forecasting department  
22 by the Business Development department in Peoples.

23  
24 **Q.** Are the forecasts of customers and therm sales appropriate  
25 and reasonable?

1 **A.** Yes. The customer and therm sales forecasts are based on the  
2 most recently available data at the time the forecasts were  
3 developed, and each assumption was reviewed for  
4 reasonableness. The forecasting methods used to develop the  
5 forecasts are theoretically and statistically sound. The  
6 average annual growth rates for customers and therms are in  
7 line with recent growth trends and consistent with model  
8 assumptions. In addition, the average model error over the  
9 past five years for the residential customer forecast is 0.1  
10 percent (319 customers) and for the small commercial customer  
11 forecast it is 1.2 percent (429 customers). Based on the  
12 above, the forecasts are appropriate and reasonable.

13

#### 14 **PEOPLES' BASE REVENUE FORECASTING PROCESS**

15 **Q.** How are the base revenue forecasts developed?

16

17 **A.** The base revenues are developed in Microsoft Excel  
18 spreadsheets. Each service area has its own model and the 14  
19 service areas are aggregated to arrive at the total base  
20 revenue projections.

21

22 The inputs to this model are:

23 1. The most recent approved tariff rate schedules of customer  
24 charges and per-therm distribution charges;

25 2. Forecasted customers from the regression models;

- 1 3. Forecasted therms-per-customer from the regression models;
- 2 4. Forecasted customers and therms from non-regression
- 3 techniques;
- 4 5. Exogenous forecast adjustments for growth not accounted
- 5 for in the regression models; and
- 6 6. Billing Determinate allocation factors.

7  
8 The revenue model inputs one through five above have  
9 previously been discussed in my prepared direct testimony.  
10 The sixth input, the billing determinate factors, represent  
11 the percentage of customers and therms to allocate to each  
12 rate schedules.

13  
14 The Residential class has 10 rates schedules:

- 15 - Residential Service (RS) 1-3;
- 16 - Residential General Service (RGS) 1-3;
- 17 - Natural Choice Transportation Residential General Service
- 18 (GST) 1-3; and
- 19 - Residential Standby Generator (RS-SG).

20  
21 The Small Commercial class has eight rates schedules:

- 22 - Small General Service (SGS);
- 23 - Natural Choice Transportation Small General Service (SGTS);
- 24 - General Service (GS) 1-3; and
- 25 - Natural Choice Transportation General Service (GST) 1-3.

1 The larger commercial and industrial classes are forecasted  
2 at the customer level so there is no need to apply allocation  
3 factors.

4  
5 Once the customers and their consumption are allocated to all  
6 the rate schedules, the customer charges and distribution  
7 per-therm charges are applied and totaled to arrive at base  
8 revenues.

9  
10 **Q.** How are billing determinate allocation factors determined for  
11 each service area?

12  
13 **A.** The first step is to calculate the historical factors (e.g.  
14 the percentage of total residential class customers that are  
15 in the RS1 rate schedule, RS2, etc.).

16  
17 Next, the trend in these percentages are analyzed for each  
18 rate schedule in each service area. The trend is extended  
19 into the future based on average change rates. For example,  
20 if the historical trend is declining percentages, the  
21 projected year will continue the decline based on the  
22 historical rate of change.

23  
24 **PEOPLES' FORECASTED BASE REVENUES**

25 **Q.** What are base revenues expected to increase by in 2021

1 projected test year, based on current rates?

2

3 **A.** Based on current 2019 rates, base revenues are expected to  
4 increase by 2.8 percent or \$6,401,475 in the 2021 projected  
5 test year. See Exhibit No. (LLC-1), Document No. 7 for base  
6 revenues by sector.

7

8 **Q.** Does Peoples conclude that the forecasts of base revenues are  
9 appropriate and reasonable?

10

11 **A.** Yes, based on the reasonableness of the customer and therm  
12 forecasts discussed in my prepared direct testimony, the  
13 reasonableness of the individual billing determinates and the  
14 accurate application of tariff rates in the revenue model,  
15 the forecasts of base revenues in the 2021 projected test  
16 year are appropriate and reasonable.

17

18 **SUMMARY**

19 **Q.** Please summarize your prepared direct testimony.

20

21 **A.** Peoples' service area will continue to grow at a steady pace  
22 over the forecast horizon. The Company expects a net increase  
23 in customers of approximately 13,000 and therm sales of  
24 approximately 2,282,200,000 in the 2021 projected test year.  
25 The methods used for developing the customer and therm sales

1 forecasts presented in my prepared direct testimony represent  
2 industry accepted and statistically sound practices and are  
3 based on appropriate and reasonable assumptions.  
4

5 **Q.** Does this conclude your prepared direct testimony?  
6

7 **A.** Yes, it does.

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**2                                   **PREPARED DIRECT TESTIMONY**3   **OF**4   **DANIEL P. YARDLEY**5   **ON BEHALF OF PEOPLES GAS SYSTEM**6  
7           **I.     INTRODUCTION**8           **Q.**    Please state your name, affiliation and business address.9  
10          **A.**    My name is Daniel P. Yardley.    I am Principal, Yardley &  
11                   Associates and my business address is 2409 Providence Hills  
12                   Drive, Matthews, NC 28105.13  
14          **Q.**    On whose behalf are you testifying?15  
16          **A.**    I am testifying on behalf of Peoples Gas System ("Peoples" or  
17                   "the Company").18  
19          **Q.**    Please provide a brief outline of your professional and  
20                   educational background.21  
22          **A.**    For the last 30 years I have been employed as a consultant to  
23                   the natural gas industry.  During this period, I have directed  
24                   or participated in numerous consulting assignments on behalf  
25                   of local distribution companies ("LDCs").  I have extensive

1 experience analyzing and developing LDC and gas pipeline cost  
2 allocation studies, rate design studies, and in other tariff  
3 matters, including the development of revenue adjustment and  
4 cost recovery mechanisms. I have also performed gas supply  
5 planning analyses and financial evaluation analyses on behalf  
6 of LDCs. I received a Bachelor of Science Degree in  
7 Electrical Engineering from the Massachusetts Institute of  
8 Technology in 1988.

9  
10 **Q.** Have you previously testified before the Florida Public  
11 Service Commission (the "Commission")?

12  
13 **A.** Yes. I testified in Peoples' prior rate case before the  
14 Commission in Docket No. 20080318-GU. I have also testified  
15 on numerous occasions before other state utility commissions,  
16 the Federal Energy Regulatory Commission, and the Canada  
17 Energy Regulator on a variety of rate and regulatory topics.  
18 The subject matters addressed in these proceedings include  
19 cost allocation, service design, rate design, revenue  
20 decoupling, cost recovery mechanisms and tariff design.

21  
22 **Q.** What is the purpose of your testimony in this proceeding?

23  
24 **A.** The primary purpose of my prepared direct testimony is to  
25 develop and support Peoples' proposed rate design applicable

1 to the Company's firm and interruptible distribution  
 2 services. I will highlight important industry developments  
 3 since Peoples' last base rate case in 2008 and explain the  
 4 implications for the rate design that is appropriate to  
 5 implement in this proceeding. The rates that I propose fairly  
 6 apportion the Company's revenue requirement among customer  
 7 classes, to be recovered through appropriate rate components  
 8 applicable to each class. The non-uniform increases to  
 9 various rates and charges reflect the results of the Company's  
 10 allocated cost of service study ("ACOSS"), which I am  
 11 supporting through my prepared direct testimony.

12  
 13 **Q.** Have you prepared an Exhibit to be introduced in this  
 14 proceeding?

15  
 16 **A.** Yes. My Exhibit No. (DPY-1) consists of 6 Documents were  
 17 prepared by me or under my supervision, entitled:

18  
 19 Document No. 1 List of Minimum Filing Requirements  
 20 Sponsored;

21 Document No. 2 Cast Iron / Bare Steel Rider ("CI/BSR")  
 22 Revenues Roll-In;

23 Document No. 3 Allocation of Proposed Revenue  
 24 Requirements to Base Rates;

25 Document No. 4 Existing and Proposed Base Rates and

1 Revenues;  
2 Document No. 5 Rate of Return by Class; and  
3 Document No. 6 Comparison Of Existing Customer Charges  
4 And Customer-Related Costs By Class  
5

6 **Q.** How is your prepared direct testimony organized?  
7

8 **A.** My prepared direct testimony is organized into two sections  
9 following this introduction. Section II provides policy  
10 background related to current trends in rate design. Section  
11 III details Peoples' rate design goals and the development of  
12 the proposed base rates.  
13

14 **RATE DESIGN POLICY BACKGROUND**

15 **Q.** How does rate design affect the achievement of energy policy  
16 objectives?  
17

18 **A.** From a public policy perspective, rate design is a critically  
19 important tool for achieving specific energy policy goals  
20 that influence the quality of life for Florida's citizens and  
21 the State's competitive position. Policy goals affected by  
22 rate design include end-use fuel mix, energy efficiency and  
23 the resulting environmental and cost impacts of energy  
24 consumption. Therefore, the form of a utility's rate  
25 structure is an important building block that can contribute

1 to achieving important energy policy goals.

2  
3 The nexus between rate design and energy policy objectives  
4 continues to receive attention throughout the U.S., due in  
5 large part to the prevalence of usage-based rate designs.  
6 Usage-based rate designs recover a substantial portion of LDC  
7 fixed-cost revenue requirements through volumetric charges  
8 applied to the amount of natural gas consumed by customers.  
9 The inherent operating incentives under this form of rate  
10 structure are for the LDC to add new customers and to promote  
11 increased consumption by its existing customers.

12  
13 While adding new customers is beneficial and consistent with  
14 energy policy goal of reducing oil heating use, the incentive  
15 to increase consumption by current customers is at odds with  
16 other public policy goals that favor energy conservation and  
17 reductions in customer energy bills. LDCs such as Peoples are  
18 promoting increased energy efficiency to their customers.  
19 Rate design is a necessary element that enables LDCs to fully  
20 embrace the energy efficiency imperative while also meeting  
21 fiduciary responsibilities to shareholders, regulators and  
22 customers alike.

23  
24 **Q.** Why are usage-based rate designs prevalent among LDCs?  
25

1 **A.** The traditional approach to rate design found in many  
2 jurisdictions today reflects historical industry drivers and  
3 market conditions. The U.S. natural gas delivery system  
4 underwent a period of broad expansion that lasted for decades  
5 following World War II. This expansion, enabled by advances  
6 in metallurgical technologies and welding techniques, brought  
7 the benefits of reliable, affordable and clean-burning  
8 natural gas to millions of households and businesses  
9 throughout the U.S., including those in Florida. Public  
10 policy promoted the expansion of natural gas infrastructure  
11 and additional penetration of natural gas into more homes and  
12 for additional end-uses. This public policy was reflected in  
13 throughput-based rate designs as expanding systems and  
14 growing loads allowed an LDC's fixed costs to be spread over  
15 greater levels of billing units, lowering average costs to  
16 consumers. Traditional usage-based rate designs were  
17 appropriate under the circumstances in which they were  
18 developed. However, the present imperative to promote  
19 increased energy efficiency in order to lower customer bills  
20 and reduce carbon emissions calls for a reordering of  
21 priorities.

22  
23 **Q.** How would you characterize Peoples' existing rate design?  
24

25 **A.** Base rates are intended to recover a utility's cost of

1 service, excluding purchased gas and other tracked costs.  
2 The costs recovered through base rates are primarily fixed  
3 costs. Peoples' rate design reflects a throughput-based  
4 approach, however, important changes implemented in Peoples'  
5 previous rate case reduced the magnitude of the resulting  
6 throughput incentive. A throughput-based rate design  
7 recovers a substantial portion of an LDC's fixed-cost revenue  
8 requirements through volumetric charges applied to the amount  
9 of natural gas consumed by customers. While the rates for  
10 customers include a combination of fixed monthly charges and  
11 throughput-based or variable charges, a significant  
12 proportion of base rate revenues are derived from the variable  
13 charge components and are directly linked to customer usage  
14 patterns.

15  
16 In Peoples' previous rate case, the Commission approved a  
17 change to the Company's residential rate design that provided  
18 for distinct monthly customer charges based upon a customer's  
19 annual load. This provided for a significant reduction in  
20 the throughput incentive for residential customers as  
21 approximately 77 percent of fixed costs are recovered through  
22 fixed charges.

23  
24 **Q.** Is Peoples proposing to implement a rate design approach that  
25 fully eliminates the throughput incentive underlying its

1 existing base rates?

2

3 **A.** No, not at this time. Nevertheless, the Company is proposing  
4 a rate design that maintains the existing proportion of  
5 residential fixed costs that are recovered through fixed  
6 charges. At the same time, the proposed rate design  
7 moderately increases the proportion of commercial fixed costs  
8 that are recovered through fixed charges. The Company  
9 believes that gradual progress toward reducing the throughput  
10 incentive is an important outcome of its rate design proposal  
11 in this proceeding.

12

13 **PEOPLES' RATE DESIGN**

14 **Q.** Please describe the specific rate design goals for Peoples  
15 that guided the development of the rate design you are  
16 recommending.

17

18 **A.** The overall rate design approach I recommend seeks to achieve  
19 the following six traditional regulatory goals for rate  
20 design and cost recovery:

21 (1)Fairness - Fairness is accomplished through pricing  
22 services based on the underlying cost. Fairness is important  
23 in many respects including between the Company and its  
24 customers, across the classes served by Peoples, and among  
25 customers taking service under a common service

1 classification.

2 (2)Not Discriminatory - Avoiding undue discrimination  
3 requires rates that do not grant an unreasonable preference  
4 or subject an unreasonable disadvantage to any customer or  
5 group of customers.

6 (3)Rate Moderation - Moderation allows for the implementation  
7 of rate design changes over time to ensure that customers are  
8 not exposed to dramatic price changes all at once.

9 (4)Revenue Stability - Revenue stability means that Peoples'  
10 base rate revenues are more predictable in view of future  
11 uncertainties. As customer usage patterns have become less  
12 certain, improved revenue stability through rate design takes  
13 on greater importance as a way of mitigating the increased  
14 risks to customers and the Company associated with such  
15 unpredictable consumption patterns.

16 (5)Energy Efficiency - Establishing a rate design that is  
17 consistent with public policy promoting reduced energy  
18 consumption benefits customers and the environment.

19 6)Simplicity - Simplicity means a rate structure that is both  
20 understandable and straightforward to administer.

21  
22 At times, these individual goals compete with one another and  
23 must be balanced to achieve an appropriate set of rates and  
24 tariff provisions to recover the Company's cost of service.

25

1 Q. Please describe Peoples' existing rate schedules.

2  
3 A. Peoples' existing rate schedules are segregated by sector,  
4 nature of service (firm or interruptible) and by customer  
5 size. Firm service is primarily provided under one  
6 Residential Service ("RS") and six General Service ("GS")  
7 rate schedules. The RS class has separate billing classes  
8 based on annual consumption. These are RS-1 for residential  
9 customers with annual consumption up to 99 therms, RS-2 for  
10 residential customers with annual consumption between 100 and  
11 249 therms and RS-3 for residential customers with annual  
12 consumption between 250 and 1,999 annual therms. The RS class  
13 has a separate billing class for Residential Gas Heat Pump  
14 Service ("RS-GHP") as well.

15  
16 The six GS rate schedules are consumption -based and include  
17 Small General Service ("SGS") for customers up to 1,999 annual  
18 therms, GS-1 for customers from 2,000 through 9,999 annual  
19 therms, GS-2 for customers from 10,000 through 49,999 annual  
20 therms, GS-3 for customers from 50,000 through 249,999 annual  
21 therms, GS-4 for customers from 250,000 through 499,999  
22 annual therms, and GS-5 for customers above 500,000 annual  
23 therms.

24  
25 A limited number of customers take firm service under one of

1 the Company's end-use-specific rate schedules. These include  
2 Commercial Street Lighting Service ("CSLS"), and Natural Gas  
3 Vehicle Service ("NGVS"), Residential Standby Generator  
4 Service ("RS-SG"), Commercial Standby Generator Service ("CS-  
5 SG"), Commercial Gas Heat Pump Service ("CS-GHP"), and  
6 Wholesale Service ("WHS").

7  
8 Peoples also provides interruptible service under three size-  
9 based rate schedules - Small Interruptible Service ("SIS"),  
10 Interruptible Service ("IS") and Interruptible Service -  
11 Large Volume ("ISLV"). Lastly, in some cases, customers  
12 taking interruptible service that can either bypass or have  
13 alternative fuel sources take service with Peoples under the  
14 Contract Interruptible Service ("CIS") rate schedule that  
15 governs the pricing and other terms of the service they  
16 receive.

17  
18 **Q.** What rates and charges are incorporated into the RS and GS  
19 rate schedules?

20  
21 **A.** The existing rate design for all of the RS and GS rate  
22 schedules is similar and includes two types of base rate  
23 charges intended to recover Peoples' non-gas revenue  
24 requirements. The RS base rates consist of three size based  
25 fixed monthly customer charges and a \$0.25465 per therm

1 variable distribution charge. The monthly customer charges  
2 are \$11.40 for RS-1 customers, \$14.25 for RS-2 customers, and  
3 \$19.01 for RS-3 customers. RS customer charges are applied  
4 per customer per month and distribution charges are applied  
5 to each customer's monthly therm usage. Under this rate  
6 structure, all residential customers pay a minimum amount to  
7 Peoples, regardless of their monthly usage. The per-therm  
8 distribution charge results in customers paying lower amounts  
9 as their consumption decreases. The distribution charge is  
10 considered a variable charge because all of the associated  
11 revenues are linked to customer usage or throughput.

12  
13 The existing rate design for GS customers is the same  
14 structure as that for residential customers. The existing  
15 monthly customer charges range from a low of \$23.76 for SGS  
16 customers up to \$285.09 for GS-5 customers. The per-therm  
17 distribution rate is \$0.32206 for SGS customers and decreases  
18 to \$0.10758 for GS-5 customers. Although Peoples' rate  
19 structure employs both fixed and variable charges, the  
20 majority of firm base revenues are recovered through the  
21 variable per-therm charges. Projected 2021 base revenues at  
22 existing rates reflect approximately 60 percent of total firm  
23 base revenue was attributable to variable charges.

24  
25 **Q.** Do the remaining rate schedules employ the same type of rate

1 design?

2  
3 **A.** The majority of the other rate schedules also utilize a  
4 combination of monthly customer charges and per-therm  
5 distribution charges. Specifically, the CSLS, NGVS, RS-GHP,  
6 CS-GHP, WHS, SIS, IS and ISLV rate schedules employ this type  
7 of rate structure with varying levels of customer and  
8 distribution charges that are intended to reflect the costs  
9 incurred to provide service.

10  
11 The standby generator-only services, RS-SG and CS-SG  
12 represent an exception to the typical rate structure. The  
13 services were developed in response to customer needs to back  
14 up their electric service during hurricane-induced or other  
15 electric service outages. Standby generator-only customers  
16 do not utilize natural gas as their primary fuel for any end-  
17 use. As a result, it is typical for these customers to have  
18 zero monthly usage. The existing rate structure for standby  
19 generator-only customers reflects a higher customer charge  
20 and an initial block of use that includes no per-therm charge.  
21 The level of the customer charge and the size of the initial  
22 block were derived to yield revenue for an average residential  
23 or SGS customer based on the Company's last base rate  
24 proceeding in 2008.

25

1 Q. Please describe Peoples' CI/BSR.

2

3 A. In 2012, the Commission approved a rate rider mechanism to  
4 recover the costs of accelerated replacement of cast iron and  
5 bare steel distribution pipe through a rate surcharge. The  
6 revenue requirement associated with eligible replacement  
7 activity is calculated each year and reflected in a rate  
8 surcharge applied to customer usage. The CI/BSR surcharge  
9 for each rate class is based upon the proportion of allocated  
10 investment in mains and services in the prior rate case and  
11 the projected throughput for the annual recovery period. The  
12 Company's CI/BSR is similar to accelerated replacement  
13 recovery riders approved for other LDCs in the U.S. In 2016,  
14 the Commission approved a change to the CI/BSR that provided  
15 for the recovery of investments in replacement of certain  
16 categories of problematic plastic pipe through the Rider.

17

18 Q. Are there separate charges for gas supply?

19

20 A. Yes. Sales customers that purchase their gas supply from  
21 Peoples pay a volumetric Purchased Gas Adjustment ("PGA")  
22 rate for gas supply. Sales customers include residential  
23 customers with volumetric use up to 1,999 annual therms and  
24 GS customers that elect to continue purchasing their gas  
25 supply from Peoples. The PGA rate recovers the costs of

1 purchased gas and upstream pipeline capacity and storage  
2 resources necessary to ensure firm delivery to customers  
3 throughout the year and is adjusted periodically to track  
4 changes in Peoples' delivered cost of gas supply. The PGA  
5 rate includes an over or under-recovery component (the true-  
6 up) that carries forward any difference between gas costs and  
7 PGA revenues for recovery or refund in a future period.

8  
9 **Q.** Do customers have the option of purchasing their gas supply  
10 from a third-party seller?

11  
12 **A.** Yes. Residential customers above 2,000 annual therms and all  
13 commercial and industrial customers may elect transportation-  
14 only service from Peoples and pay Peoples to deliver gas the  
15 customers have purchased from a third-party marketer. The  
16 gas price for a firm transportation customer is negotiated in  
17 a competitive marketplace between the customer and the  
18 marketers. All transportation customers are subject to the  
19 additional terms of either the Natural Choice Transportation  
20 Service Rider ("NCTS") or the Individual Transportation  
21 Service Rider ("ITS"), which govern the relationship among  
22 customers, Peoples and marketers including all pool  
23 administration functions. Transportation customers also have  
24 the option of returning to sales service at any point in the  
25 future, subject to certain notice requirements.

1 **Q.** How does the Company's current rate design compare with the  
2 rate designs of other LDCs?

3  
4 **A.** Peoples' base rate structure mirrors that of many LDCs. In  
5 particular, the use of a monthly customer charge and a  
6 variable distribution charge based on consumption to recover  
7 revenue requirements is fairly prevalent across the U.S. This  
8 particular form of rate design reflects historical industry  
9 drivers and economic conditions that are now changing in many  
10 respects.

11  
12 While the basic structure of the Company's rate design is  
13 similar to that of many other LDCs, there are also  
14 differences. Many LDCs employ revenue stability mechanisms  
15 that affect revenue recovery. In addition, many firm and  
16 industrial customers of other LDCs pay a higher portion of  
17 their bills through fixed charges.

18  
19 **Q.** Did the Company perform an allocated cost of service study  
20 ("ACOSS") to support the rate design recommendations?

21  
22 **A.** Yes. An ACOSS provides an important means of assessing the  
23 reasonableness of existing prices and to guide the  
24 development of price changes. In particular, the ACOSS set  
25 forth in MFR Schedules H-1, H-2 and H-3 examines all of the

1 Company's common costs reflected in its base rate petition,  
2 and through appropriate cost assignments and allocations,  
3 establishes measures of investments, expenses and income by  
4 customer class. The ACROSS is an important tool because many  
5 of the Company's costs are common and are incurred to serve  
6 many classes of customers collectively.

7  
8 The ACROSS calculates the total investment and operating costs  
9 incurred to serve each customer class, thereby establishing  
10 class-specific total revenue requirements. The class-  
11 specific revenue requirements are compared to class revenues  
12 in order to establish class income and rate of return on  
13 investment. The class-specific rates of return are used to  
14 guide the apportionment of the revenue requirements among all  
15 of Peoples' customer classes in conjunction with the  
16 development of proposed rates. The ACROSS also determines the  
17 classification of costs among demand, customer and volumetric  
18 components. The classification of costs within a rate  
19 classification is used to guide the development of the form  
20 of billing rates for that class. Although the ACROSS is not  
21 the only factor relied upon to design rates, it is an  
22 important guide to ensuring that the process is fair and  
23 reasonable.

24  
25 Q. Please describe the general costing methodology that is

1 incorporated in the Peoples' ACOSS.

2  
3 **A.** The primary principle guiding the ACOSS process is that of  
4 cost causation. That is, each step in the development of the  
5 ACOSS is consistent with the factors that drive or contribute  
6 to the incurrence of costs on the Peoples system. One  
7 important consideration in the development of an ACOSS is an  
8 approach to allocating fixed demand costs. The Peoples ACOSS  
9 reflects a peak and average allocation of fixed demand costs  
10 that is consistent with studies performed in prior Peoples  
11 rate cases.

12  
13 **Q.** Please summarize the results of the ACOSS.

14  
15 **A.** The primary results from the ACOSS are the rate of return by  
16 class and the unit customer and demand-related costs. The  
17 ACOSS demonstrates that the rates of return for customers  
18 taking service on RS, RS-SG, RS-GHP, GS-3, GS-4, GS-5, SIS,  
19 IS and WHS rate schedules are less than the system-average  
20 rate of return of 2.5 percent for the test period at present  
21 rates. The rate of return for all other classes is above the  
22 system average. Table 1 of Document No. 5 in my exhibit  
23 provides a summary of the rate of return by class.

24  
25 With respect to unit costs, the ACOSS indicates that the

1 system-wide average customer cost is \$22.67 per month, and  
2 the cost generally varies with the size of the customer. The  
3 lowest average customer cost of \$19.65 per month is indicated  
4 for RS-SG class. A comparison of existing customer costs to  
5 customer-related costs is presented in Table 2 of Document  
6 No. 6 in my exhibit.

7  
8 **Q.** Are there detailed schedules supporting these results?

9  
10 **A.** Yes. MFR Schedule H-1 of the Company's MFRs provides detailed  
11 reporting of all ACOSS results. Specifically, MFR Schedule  
12 H-1, page 2 provides the allocated cost of service associated  
13 with each class, which is compared to the existing revenues  
14 to yield the class-specific revenue deficiency. Also, MFR  
15 Schedule H-2, page 3 provides a class-specific income  
16 statement showing the earned rate of return by class.

17  
18 **Q.** What steps did you employ to establish the specific base rates  
19 you are proposing?

20  
21 **A.** First, I determined the class-by-class revenue requirements,  
22 which reflect the results of the ACOSS and other rate design  
23 principles. Next, I evaluated the existing level of customer  
24 charges and proposed increases, where appropriate, to recover  
25 a greater proportion of customer-related costs through

1 monthly fixed customer charges. Last, I established the  
2 appropriate rate structure and rate levels to recover the  
3 remaining portion of class revenue requirements.  
4

5 **Q.** How did you develop the class-by-class revenue requirements?  
6

7 **A.** The class-by-class base revenue requirements were developed  
8 by first comparing the existing base revenues to the base  
9 revenue requirements indicated by the results of the ACOSS.  
10 For purposes of developing this comparison, it is necessary  
11 to adjust existing base revenues recovered through base rates  
12 by the level of CI/BSR revenue requirements that roll-in to  
13 base rates when the CI/BSR rates are reset with the  
14 implementation of new base rates. Peoples is proposing that  
15 \$23.6 million out of \$28.6 million of projected 2021 CI/BSR  
16 revenue requirements will be rolled-in to base rates. I  
17 calculated the class-by-class revenues associated with the  
18 roll-in using the projected 2021 throughput and the  
19 parameters of the rider. The resulting CI/BSR roll-in  
20 revenues by class are set forth in Document No. 2 of my  
21 exhibit in Column C. The results are carried forward to  
22 Column C and reflected in the total current revenue  
23 calculation provided in Column D as shown on Document No. 3  
24 of my exhibit. The result in Column D is compared to the  
25 revenue requirements from the ACOSS to establish the revenue

1           deficiency by class as determined through the ACOSS.

2  
3           In view of the results of the ACOSS and other important rate  
4           design goals, the Company is proposing to recover an equal  
5           percentage change in base revenues among two groups of  
6           customers: (i) residential customers taking service pursuant  
7           to Rate Schedules RS, RS-SG and RS-GHP, (ii) customers taking  
8           service pursuant to the Company's commercial rate schedules  
9           SGS, GS-1, GS-2, GS-3, GS-4, GS-5, CS-GS, CS-GHP, CSLS, and  
10          NGVS, wholesale service, and customers taking service  
11          pursuant to the Company's interruptible rate schedules SIS,  
12          IS and ISLV. This is an appropriate approach given the  
13          twelve-year time period since the Company's last base rate  
14          proceeding in 2008.

15  
16       **Q.**    Are you recommending any variation in the change in revenue  
17           responsibility within each of these three groups?

18  
19       **A.**    Yes. I am proposing Peoples apply different base revenue  
20           increases within each group of customers. Within the  
21           residential group, I am proposing the Company apply a greater  
22           proportionate increase in the base revenues for RS-1  
23           customers. Presently, RS-1 customers pay considerably less  
24           than RS-2 and RS-3 customers even though the cost of  
25           connecting to the Peoples system is similar for most

1 residential customers.

2  
3 Within the second group, I am proposing to increase the base  
4 revenues for SIS and IS interruptible customers  
5 proportionately more than for the firm customers.  
6 Interruptible customers pay among the lowest rates on the  
7 system and the results of the COSS indicates that they are  
8 providing a return that is below the system-average at current  
9 rates. The \$1.5 million incremental base revenue from  
10 interruptible classes is used to reduce the increase to SGS,  
11 GS-1 and GS-2 customers because the rates of return for these  
12 rate classes are higher than for other rate classes in this  
13 group.

14  
15 **Q.** Why is the level of the monthly fixed customer charge  
16 important?

17  
18 **A.** The level of the monthly fixed customer charge is important  
19 for a variety of reasons that relate to the Company's rate  
20 design goals I described earlier. First, the monthly fixed  
21 customer charge provides customers with an important price  
22 signal concerning the impact of connecting to Peoples  
23 distribution system. Second, recovering customer-related  
24 costs through monthly fixed customer charges contributes to  
25 intra-class fairness. To the extent that a portion of

1 customer-related costs are recovered through volumetric  
2 charges, intra-class subsidies are created as larger  
3 customers pay a disproportionate share of customer-related  
4 costs. Third, the fixed monthly customer charge provides  
5 revenue stability as fixed costs that are incurred to serve  
6 customers are recovered through a fixed charge.

7  
8 **Q.** What monthly customer charges do you propose for the  
9 residential class?

10  
11 **A.** I am proposing that Peoples increase the monthly customer  
12 charge for each group of residential customers and reduce the  
13 differential between the RS-1 and RS-2 monthly charges.  
14 Specifically, the proposed monthly charges are \$16.20 for RS-  
15 1, \$19.20 for RS-2 and \$26.20 for RS-3 residential customers.  
16 The resulting average monthly charge of \$20.06 is closer to  
17 the monthly customer cost indicated by the ACOSS.

18  
19 **Q.** How did you derive the variable distribution charge  
20 applicable to residential customers?

21  
22 **A.** The remaining revenue requirements allocated to the  
23 residential class are recovered through the variable  
24 distribution charge. The resulting distribution charge is  
25 \$0.34456 per therm. The revenue increase from the residential

1 customer charges reduces the revenue increase required  
2 through the residential delivery charge. In addition, the  
3 CI/BSR surcharge is reduced as a result of the roll-in of the  
4 CI/BS revenue requirements into base rates.

5  
6 **Q.** How did you derive proposed rates for the GS customer classes?

7  
8 **A.** The proposed rates for the GS classes were developed using  
9 the same approach as for the residential class. I first  
10 established an appropriate customer charge for each class.  
11 The proposed customer charge for the SGS class is \$32.50 per  
12 month. Similarly, I recommend Peoples increase the customer  
13 charges for other GS classes to yield new charges that range  
14 from \$48 for GS-1 customers to \$1,695 per month for GS-5  
15 customers. For each GS class, the remaining revenue  
16 requirements indicated in Document No. 3 of my exhibit are  
17 recovered through revised per-therm charges. The roll-in of  
18 the CI/BS revenue requirements results in a reduced CI/BSR  
19 surcharge to GS customers.

20  
21 **Q.** How did you derive proposed rates for the interruptible  
22 customer classes?

23  
24 **A.** The proposed rates for the SIS, IS and ISLV classes were  
25 developed by first establishing an appropriate customer

1 charge and then setting the variable distribution charge to  
2 recover the remaining revenue requirements. The proposed  
3 customer charge for the SIS class is \$1,695 per month and the  
4 distribution charge is \$0.09002 per therm. The proposed  
5 customer charge for the IS class is \$1,895 per month and the  
6 distribution charge is \$0.04691 per therm. Last, the proposed  
7 customer charge for the IS-LV class is \$2,095 per month and  
8 the distribution charge is \$0.01151 per therm.

9  
10 **Q.** Are there any additional proposed changes to the  
11 Interruptible Rate Classes?

12  
13 **A.** Yes. The Company proposes that rate schedules SIS, IS and  
14 ISLV rate classes begin paying the CI/BSR effective January  
15 1, 2021. The new rates for these customers will be determined  
16 in 2021 annual projection filing submitted in September 2020.  
17 This ensures all customers are paying the fair proportional  
18 cost of the infrastructure replacement program.

19  
20 **Q.** Please describe the proposed changes to the rates for the  
21 standby generator classes.

22  
23 **A.** I am proposing Peoples continue the same form of rate design,  
24 which reflects a higher fixed customer charge given these  
25 customers may go for extended periods without calling on their

1 natural gas service. The service also reflects no  
2 distribution charge for the first 20 therms for residential  
3 standby generators and the first 40 therms for commercial  
4 standby generators. The proposed monthly customer charge for  
5 the residential standby generator class is \$27.74 and the  
6 distribution charge is \$0.34456. Similarly, the customer  
7 charge for commercial standby generators is 48.00, and the  
8 proposed distribution charge is \$0.52937.

9  
10 **Q.** Please describe the proposed changes to the rates for the gas  
11 heat pump classes.

12  
13 **A.** I am proposing Peoples increase the RS-GHP fixed monthly  
14 customer charge to \$26.20 and the CS-GHP fixed monthly  
15 customer charge to \$48.00. These changes correspond to those  
16 for the RS-3 and GS-1 monthly customer charges. I am not  
17 proposing the Company change the distribution charges for the  
18 RS-GHP and CS-GHP services in view of the limited experience  
19 under these new services.

20  
21 **Q.** Have you derived new rates for the NGVS rate class?

22  
23 **A.** No. This rate schedule is currently applicable to customers  
24 that use natural gas for their vehicles ("NGV") and has been  
25 closed to new participation as of August 1, 2013. Current

1 fleets or customers that have initiated gas service since the  
2 closure of this rate schedule participate in the NGVS-2 or  
3 otherwise applicable RS or GS rate schedule according to their  
4 annual volumetric use. Peoples is proposing to eliminate  
5 this tariff and transfer the customers to the applicable GS  
6 rate class. Four customers are affected by the elimination  
7 of the rate class.

8  
9 **Q.** Have you prepared a summary of the proposed base rate changes?

10  
11 **A.** Yes. The existing and proposed rates for each class are  
12 compared in Document No. 4 of my exhibit. In addition,  
13 Document No. 3 in my exhibit provides a proof of revenues  
14 demonstrating that the proposed charges yield the requested  
15 base revenue increase based on the Company's forecasts of  
16 sales and customers.

17  
18 **Q.** Does this conclude your prepared direct testimony?

19  
20 **A.** Yes, it does.

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                                   **PREPARED DIRECT TESTIMONY**

3   **OF**

4   **T. MARK WHITAKER**

5  
6           **POSITION, QUALIFICATION AND PURPOSE**

7   **Q.**   Please state your name, address, occupation and employer.

8  
9   **A.**   My name is T. Mark Whitaker. My business address is 702 North  
10       Franklin Street, Tampa, Florida 33602. I am employed by  
11       Peoples Gas System ("Peoples" or the "Company") as the  
12       Director of Gas Operations, having held that position since  
13       February 2019.

14  
15   **Q.**   Please describe your duties and responsibilities in that  
16       position.

17  
18   **A.**   As the Director of Gas Operations, I am responsible for all  
19       the daily operations. This includes the three service  
20       territories (North, Central, and South), the Measurement &  
21       Regulation functions, and Gas Control. These service  
22       territories include 14 service areas. My responsibilities  
23       include developing operating budgets and directing and  
24       planning the operation and maintenance of the gas  
25       distribution system to ensure maximum efficiency and safety

1 of gas delivery to Peoples' natural gas customers. I am  
2 responsible for organizational and employee development, new  
3 business development support, employee training and  
4 evaluation compliance, and compensation for all Gas  
5 Operations employees.

6  
7 **Q.** Please provide a brief outline of your educational background  
8 and business experience.

9  
10 **A.** I hold a Bachelor of Science in Electrical Engineering  
11 Technology (BSEET) from Georgia Southern University and a  
12 Master's in Business Administration (MBA) from Georgia State  
13 University. My career in the natural gas industry began in  
14 1987. I was employed by Atlanta Gas Light Company in various  
15 roles from 1987 to 2004. These roles/responsibilities  
16 included: Engineer - Technical Services, Measurement  
17 Engineer, Manager - Measurement Operations, Director - Gas  
18 Operations Support, Director - Solutions Delivery, Director  
19 of Projects - Pipeline Operations, Director of Projects-  
20 Capacity Planning. I began my employment at Peoples in  
21 January of 2004 as the Manager of Measurement and Telemetry.

22  
23 I am a member of the Institute of Electrical and Electronic  
24 Engineers and have participated and presented in professional  
25 industry groups in multiple areas of operations. These groups

1 include: 1) American Gas Association; 2) Southern Gas  
2 Association; 3) South Eastern Gas Association; and 4) Florida  
3 Natural Gas Association.

4  
5 **Q.** What are the purposes of your prepared direct testimony in  
6 this proceeding?

7  
8 **A.** My prepared direct testimony addresses the miscellaneous  
9 service charges in Peoples' tariff, such as charges for  
10 connecting and reconnecting service to a customer or changing  
11 the customer's name and/or address, and how the amounts of  
12 those charges were developed.

13  
14 **Q.** Did you prepare any exhibits in support of your prepared  
15 direct testimony?

16  
17 **A.** Yes. Exhibit No. (TMW-1) was prepared under my direction and  
18 supervision. My Exhibit consists of one document entitled:

19  
20 Document No. 1 List of Minimum Filing Requirements  
21 ("MFR") Sponsored

22  
23 The information in the MFR schedules listed in Document No.  
24 1 of my exhibit are based on the business records of the  
25 Company maintained in the ordinary course of business and are

1 true and correct to the best of my information and belief.

2

3 **Q.** Please describe the methodology that was used in determining  
4 the costs to perform each of the tasks reflected in MFR  
5 Schedule E-3.

6

7 **A.** For each identified utility service, the Company performed a  
8 time study and cost analysis. The time study involved the  
9 capture and review of the detailed tasks involved. The tasks  
10 include customer communications, order handling, travel  
11 times, and job times. This incorporated a review and analysis  
12 of the labor and material costs required to complete each  
13 activity which were integrated into a per service cost.

14

15 **Q.** What labor and material costs were used in developing the  
16 cost of each identified task?

17

18 **A.** The Company used payroll and purchasing data as the basis for  
19 labor and material costs. As detailed in MFR Schedule E-3,  
20 the labor and material costs were adjusted to reflect the  
21 2021 projected test year assumptions. Cost adjustments were  
22 based upon year over year cost projections.

23

24 **Q.** Where did you obtain the assumptions used to determine the  
25 2021 projected test year rates and costs?

1 **A.** The labor rates and material cost assumptions used for the  
2 2021 projected test year are discussed in Company witness  
3 Sean P. Hillary's prepared direct testimony and listed in MFR  
4 Schedule G-2 page 10.

5  
6 **Q.** Is Peoples proposing any new miscellaneous service charges?

7  
8 **A.** No. The Company is not proposing any new miscellaneous  
9 service charges in this proceeding.

10  
11 **Q.** Is Peoples proposing any changes to the current miscellaneous  
12 service charges?

13  
14 **A.** Yes. Peoples is proposing to modify several miscellaneous  
15 service charges based on the cost of the activities involved  
16 as shown in MFR Schedule E-3. The Company reviewed its  
17 miscellaneous service charges and the cost involved in  
18 performing these services. At the conclusion of this review  
19 process, various changes in the miscellaneous service charges  
20 are being proposed. These proposed changes are shown on  
21 Tariff Sheet Nos. 5.101 and 5.101-1 of the legislative  
22 versions of the revised tariff sheets contained in MFR  
23 Schedule E-9 sponsored by Company witness Luke A. Buzard.

24  
25 **Q.** Please describe the MFR "I" Schedules that you are sponsoring.

1 **A.** I am sponsoring MFR Schedules I-1 through I-3. Each  
2 requirement is described below.

3  
4 (1) MFR Schedule I-1 requires the listing of interruptions in  
5 service affecting the lesser of 10 percent or 500, or more  
6 customer meters in a division. As indicated on the schedule,  
7 there were zero interruptions of service meeting these  
8 criteria during the 2019 historic base year.

9  
10 (2) MFR Schedule I-2 requires a summary of notices Peoples  
11 has received from the Commission with respect to Rule  
12 violations during the period since the last base rate  
13 proceeding, but not to exceed five years. As shown on MFR  
14 Schedule I-2, between January 1, 2015 and December 31, 2019,  
15 Peoples received 66 such notices, all of which were addressed  
16 and completed.

17  
18 (3) MFR Schedule I-3 requires a listing of meters with a rated  
19 capacity of: (1) 250 cubic feet / hour ("cfh") or less which  
20 are not included in an approved statistical sampling plan;  
21 (2) between 251 cfh and 2500 cfh; and, (3) over 2500 cfh; which  
22 have not been tested for accuracy within 120 months of the  
23 2019 historic base year end.

24  
25

1 **SUMMARY**

2 **Q.** Please summarize your prepared direct testimony.

3

4 **A.** My prepared direct testimony provides an overview of the data  
5 modeling, analytical review, and charge calculations used to  
6 determine Peoples' cost of performing the activities for  
7 which miscellaneous service charges are provided in Peoples'  
8 tariff. The miscellaneous service charges cover activities,  
9 such as, providing the initial service connection for a  
10 customer, reconnecting a previously disconnected customer,  
11 and providing for final notice of termination. Peoples is  
12 proposing changes to several miscellaneous service charges  
13 based on the cost of the activities involved as shown in MFR  
14 Schedule E-3.

15

16 **Q.** Does this conclude your prepared direct testimony?

17

18 **A.** Yes, it does.

1                                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                                   **PREPARED DIRECT TESTIMONY**

3                                   **OF**

4                                   **LUKE A. BUZARD**

5  
6   **Q.**   Please state your name, address, occupation and employer.

7  
8   **A.**   My name is Luke A. Buzard. My business address is 702 North  
9           Franklin Street, Tampa, Florida 33602. I am employed by  
10          Peoples Gas System ("Peoples" or the "Company") as the Vice  
11          President of Pipeline Safety & Regulatory Affairs.

12  
13   **Q.**   Please describe your duties and responsibilities in that  
14          position.

15  
16   **A.**   I am responsible for overseeing all aspects of the rates,  
17          compliance and regulatory matters under the jurisdiction of  
18          the Florida Public Service Commission ("Commission") for  
19          Peoples. I have also coordinated the preparation and filing  
20          of Peoples' request in this base rate proceeding. My duties  
21          also include responsibility for Peoples' safety and  
22          compliance programs, including requirements set by the  
23          Pipeline and Hazardous Materials Safety Administration  
24          (PHMSA), an agency of the Department of Transportation.

25

1 Q. Please provide a brief outline of your educational background  
2 and business experience.

3

4 A. I received my Bachelor of Science degree, with a concentration  
5 in Accounting, and my Masters of Accountancy from the College  
6 of Business Administration at the University of South  
7 Florida. Prior to my current position, my role was Director,  
8 Pipeline Safety & Operational Services, where my  
9 responsibilities included technical training, compliance,  
10 standards & technical services and employee and contractor  
11 safety. I have also previously served as the Director of  
12 Internal Audit for TECO Energy. I am a Certified Public  
13 Accountant in the State of Florida and a Certified Internal  
14 Auditor through the Institute of Internal Auditors.

15

16 Q. What is the purpose of your prepared direct testimony in this  
17 proceeding?

18

19 A. The purpose of my prepared direct testimony is to present and  
20 support the tariff modifications proposed as part of Peoples'  
21 request for an increase in base rates in this proceeding. My  
22 prepared direct testimony will describe proposed changes to  
23 Peoples' tariff, including changes to its Rules and  
24 Regulations, Rate Schedules, Standard Forms, as well as  
25 describe one new proposed tariff.

1 Q. Did you prepare any exhibits in support of your prepared  
2 direct testimony?

3

4 A. Yes. My Exhibit No. (LAB-1) consists of 1 document, entitled:

5

6 Document No. 1. List of Sponsored Minimum Filing  
7 Requirements ("MFRs")

8

9 The information in the MFR schedules listed in Document No.  
10 1 of my exhibit are based on the business records of the  
11 company maintained in the ordinary course of business and are  
12 true and correct to the best of my information and belief.

13

14 Q. What are Peoples' proposed tariff revisions?

15

16 A. Peoples is proposing revisions to the following Sections of  
17 its tariff:

18

1. Territory Served

19

2. Rules and Regulations

20

3. Counties and Communities Served

21

4. Rate Schedules and Riders

22

5. Standard Forms

23

24 **Territory Served**

25 Q. Please describe the revisions proposed to the territory

1 served section of the tariff.

- 2
- 3 **A.** The proposed change to the territory served is an updated map  
4 that reflects the new areas served by Peoples since its last  
5 base rate increase request in 2008.

6

7 **Rules and Regulations**

- 8 **Q.** Please describe the proposed changes to the miscellaneous  
9 charges section of the tariff.

- 10
- 11 **A.** The proposed changes to Miscellaneous Service Charges reflect  
12 the results of the cost analyses performed for these services  
13 as supported by Peoples' Witness T. Mark Whitaker in his  
14 prepared direct testimony.

- 15
- 16 **Q.** Please describe the proposed changes to the Quality section  
17 of the tariff.

- 18
- 19 **A.** Peoples proposes to modify its gas quality specification to  
20 allow Peoples, on a case by case basis, to adjust or waive  
21 the gas quality specification in order to better support the  
22 development of Renewable Natural Gas ("RNG") in Florida.  
23 Safety and operational issues will be of paramount importance  
24 in any decision to adjust or waive gas quality specifications.  
25 This modification provides greater flexibility for the

1 Company to allow direct injection of RNG into Peoples' system  
2 while maintaining all quality and safety standards on a system  
3 wide basis. The Company's efforts related to RNG are  
4 discussed further in Peoples' Witness Timothy O'Connor's  
5 prepared direct testimony.

6  
7 **Q.** Is Peoples' proposing revisions to the Rules and Regulations  
8 section of its tariff?

9  
10 **A.** Yes. Peoples is proposing revisions to Section 5, Rules and  
11 Regulations, Article VI: Main and Service Extensions of its  
12 Tariff. The Company is proposing revisions to its Maximum  
13 Allowable Construction Cost ("MACC"), which is the maximum  
14 capital cost to be incurred by the Company for an extension  
15 of main and service facilities to a customer. Where the  
16 facilities to be installed require an investment by the  
17 Company in excess of the MACC, the customer is required to  
18 pay a construction deposit in an amount equal to the excess  
19 of the estimated construction cost over the MACC. Currently,  
20 the MACC shall equal to four times the estimated annual  
21 revenue to be derived from the facilities, less the cost of  
22 gas. Peoples proposes to increase the MACC from four to 10  
23 times the estimated annual revenue to be derived from the  
24 facilities, less the cost of natural gas.

25

1 Q. How have construction costs changed since the Company's last  
2 base rate proceeding in 2008?

3  
4 A. As demonstrated in Peoples' witness Richard F. Wall's  
5 prepared direct testimony, the cost of construction has  
6 increased significantly since Peoples' last base rate  
7 proceeding, in 2008. The construction cost increases are  
8 significant enough to justify an increase to the calculation  
9 of the MACC which would provide a benefit to Peoples'  
10 customers when expanding natural gas service to a home or  
11 business.

12  
13 Q. Is Peoples proposing any other revisions to the Rules and  
14 Regulations of the Tariff?

15  
16 A. Yes. There are several administrative changes to the Rules  
17 and Regulations changes to the tariff. The clean and  
18 legislative versions of these changes are included in MFR E-  
19 9.

20  
21 **Counties and Communities Served**

22 Q. Please describe the revisions proposed to the counties and  
23 communities served section of the tariff.

24  
25 A. The proposed changes to the counties and communities served

1 is an updated list that reflects the new areas to which  
2 Peoples has extended service in response to customer demand.

3  
4 **Rate Schedules**

5 **Q.** Please describe the substantive revisions to the rate  
6 schedules and riders being proposed by Peoples.

7  
8 **A.** Peoples proposes the following the revisions to the rate  
9 schedules and riders as filed with this Commission pursuant  
10 to the file and suspend provisions of Section 366.06, *Florida*  
11 *Statues*. The rate schedules and riders in Section 7 of the  
12 tariff reflect the new rates developed and supported by Expert  
13 witness Daniel P. Yardley's prepared direct testimony.

14  
15 **Q.** Please describe other substantive proposed revisions to the  
16 rate schedules.

17  
18 **A.** Peoples proposes the following additional revisions to the  
19 rate schedules:

- 20 1. Removing the Natural Gas Vehicle Service-1 rate schedule  
21 tariff. As described in Witness Yardley's direct  
22 testimony, this tariff has been closed to new customers  
23 since 2013 and existing customers will be shifted to the  
24 otherwise applicable rate schedule upon approval of new  
25 tariff rates.

1           2.    Modifications to Natural Gas Vehicle Service-2 ("NGV-  
2                   2") tariff to remove the 1.6 percent factor from the  
3                   calculation.       This change will provide greater  
4                   flexibility to structure the facility fee based on  
5                   customer needs and project specific requirements. With  
6                   this change, the NGV-2 tariff facility fee will be  
7                   determined in a manner consistent with the RNG tariff.  
8                   The tariff change will encourage expanded use of natural  
9                   gas as a transportation fuel.

10  
11           3.    Renewable Natural Gas Service. The proposed changes for  
12                   this tariff are to support the development of RNG in  
13                   Florida. The modifications will revise and clarify the  
14                   types of utilized equipment, the capture of renewable  
15                   natural gas and the ownership of renewable natural gas.  
16                   As the RNG market in Florida begins to grow, there has  
17                   been a broadening of the types of business structures  
18                   for RNG projects that were not contemplated when the RNG  
19                   tariff was originally added. Therefore, the Company  
20                   seeks to adjust this tariff to make it applicable to the  
21                   emerging business structures in the RNG arena.

22  
23           4.    As described in Expert witness Yardley's direct  
24                   testimony, Peoples is proposing that the Cast Iron /  
25                   Bare Steel Rider ("CI/BSR") rates are applicable to the

1 Small Interruptible Service, Interruptible Service, and  
2 Interruptible Service - Large Volume rate classes  
3 effective January 1, 2021 as these rate classes also  
4 derive a benefit from a safer and more reliable natural  
5 gas system. The proposed rates for these rate classes,  
6 along with the other rate classes, will be calculated in  
7 the annual CI/BSR projection filing due September 2020.  
8

9 5. Individual Transportation Service. Peoples is proposing  
10 to make changes to its penalty calculations by changing  
11 the references from FTS-2 to FTS-3. Additionally,  
12 Peoples is proposing to change its Alert Day tolerance  
13 from 6 percent to 4.17 percent to better align with  
14 upstream capacity contracts.  
15

16 **Q.** Is Peoples proposing any new tariffs?  
17

18 **A.** Yes, Peoples proposes to issue a new tariff for virtual  
19 natural gas pipeline services. The Virtual Pipeline Natural  
20 Gas Service tariff ("VPNGS") is designed to serve customers  
21 that are interested in natural gas supply that cannot be  
22 served via pipeline by the Company due to the customer's need  
23 for gas versus the time it takes to construct the pipeline,  
24 the economic feasibility of constructing a pipeline to their  
25 location, or due to a customer's intermittent demand or

1 temporary need for gas service. The VPNGS can be a temporary  
2 or interim service that allows Peoples to deliver natural gas  
3 to customers until the pipeline system exists to serve  
4 directly or can be a longer-term solution when a pipeline  
5 option does not exist.

6  
7 **Standard Forms**

8 **Q.** Is Peoples proposing revisions to its Standard Forms?

9  
10 **A.** Yes, Peoples is proposing to modernize the following Standard  
11 Forms:

- 12 1. Gas Service Agreement
- 13 2. Construction Deposit Agreement
- 14 3. Gas Bill
- 15 4. Final Notice
- 16 5. Notice and Affidavit
- 17 6. Nomination
- 18 7. Firm Delivery and Operational Balancing Agreement
- 19 8. Data Access Agreement
- 20 9. Access Form

21  
22 Additionally, Peoples proposes to remove the following  
23 outdated forms, as they are no longer in effect:

- 24 1. Miscellaneous Receipt
- 25 2. Customer's Meter Reading Card

1 3. Customer Service Order

2 4. Auto Pay

3 5. Contract for Interruptible Natural Gas Service

4  
5 **Q.** What are the benefits of the proposed administrative  
6 revisions to the tariff?

7  
8 **A.** These administrative revisions are necessary to maintain an  
9 accurate, up to date tariff.

10  
11 **SUMMARY**

12 **Q.** Please summarize your prepared direct testimony.

13  
14 **A.** The proposed revisions to Peoples' existing tariff sheets are  
15 necessary to address current and anticipated operational,  
16 business and customer needs. Taken together with the prepared  
17 direct testimony of other Peoples' witnesses, these proposed  
18 tariff revisions will permit Peoples to recover its prudent  
19 costs of providing safe and reliable natural gas utility  
20 service.

21  
22 **Q.** Does this conclude your prepared direct testimony?

23  
24 **A.** Yes, it does.  
25

DOCKET NO. \_\_\_\_\_-GU  
FILED: 06/08/2020

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                                   **PREPARED DIRECT TESTIMONY**

3   **OF**

4   **DANE A. WATSON**

5   **ON BEHALF OF PEOPLES GAS SYSTEM**

6  
7   **I.    POSITION, QUALIFICATION, AND PURPOSE**

8   **Q.**    Please state your name, address, occupation and employer.

9  
10 **A.**    My name is Dane Watson. My business address is 101 E. Park  
11        Blvd, Suite 220, Plano, Texas 75074. I am employed by  
12        Alliance Consulting Group.

13  
14 **Q.**    Please describe your duties and responsibilities in that  
15        position.

16  
17 **A.**    I am the Managing Partner in Alliance Consulting Group  
18        ("Alliance"). As the Managing Partner of Alliance, I am  
19        responsible for performing and defending depreciation studies  
20        across the United States in a variety of regulatory  
21        proceedings. My duties include the assembly and analysis of  
22        historical and simulated data, conducting field reviews,  
23        estimating service life and net salvage estimates,  
24        calculating annual depreciation, presenting recommended  
25        depreciation rates to utility management, and supporting such

1 rates before regulatory bodies. I have performed more than  
2 250 depreciation studies in my career, appeared in more than  
3 200 cases, and testified before 35 regulatory bodies as an  
4 expert witness on the subject of depreciation.

5  
6 **Q.** Please provide a brief outline of your business experience.

7  
8 **A.** Since graduating from college in 1985, I have worked in the  
9 areas of depreciation and valuation. I founded Alliance in  
10 2004, and I am responsible for conducting, depreciation,  
11 valuation, and certain other accounting-related studies for  
12 utilities in various regulated industries. My prior  
13 employment from 1985 to 2004 was the Texas Utilities and  
14 successor companies ("TXU"). During my tenure with TXU, I  
15 was responsible for, among other things, conducting valuation  
16 and depreciation studies for the domestic TXU Companies.  
17 During that time, in addition to my depreciation  
18 responsibilities, I also served as Manager of Property  
19 Accounting Services and Records Management.

20  
21 **Q.** What is your educational background?

22  
23 **A.** I hold a Bachelor of Science degree in Engineering from the  
24 University of Arkansas at Fayetteville and a Master's Degree  
25 in Business Administration from Amberton University. I am a

1 registered Professional Engineer in the State of Texas.

2  
3 **Q.** Do you hold any special certification as a depreciation  
4 expert?

5  
6 **A.** Yes. The Society of Depreciation Professionals (the  
7 "Society") has established national standards for  
8 depreciation professionals. The Society administers an  
9 examination and has certain required qualifications to become  
10 certified in this field. I met all the requirements and have  
11 become a Certified Depreciation Professional ("CDP").

12  
13 **Q.** Please describe your other professional activities.

14  
15 **A.** I have twice served as Chair of the Edison Electric Institute  
16 ("EEI") Property Accounting and Valuation Committee and have  
17 been Chairman of EEI's Depreciation and Economic Issues  
18 Subcommittee. I am a Senior Member of the Institute of  
19 Electrical and Electronics Engineers ("IEEE") and have held  
20 numerous offices on the Executive Board of the Dallas Section  
21 of IEEE as well as National and Worldwide offices. I have  
22 also served twice as the President of the Society of  
23 Depreciation Professionals.

24  
25 **Q.** Have you previously testified before state and/or regulatory

1 commissions?

2

3 **A.** Yes. I have testified before numerous state and federal  
4 agencies in my 35-year career in performing depreciation  
5 studies. I have conducted depreciation studies, filed  
6 written testimony, and/or testified before the Commissions  
7 identified in Exhibit No. (DAW-1).

8

9 **Q.** What is your responsibility and participation in the  
10 preparation of the Depreciation Rate Study ("the Study") for  
11 Peoples Gas System ("Peoples" or the "Company")?

12

13 **A.** I was personally responsible for, participated in, and  
14 directed all aspects of the work performed by Alliance  
15 resulting in the recommendations contained in Document No. 2  
16 of my exhibit, the Study.

17

18 **Q.** What are the purposes of your prepared direct testimony in  
19 this proceeding?

20

21 **A.** The purpose of my prepared direct testimony is to (1) discuss  
22 the recent depreciation study conducted from Peoples'  
23 depreciable assets based on actual historical data as of  
24 December 31, 2018 and the forecasted plant and reserve  
25 balances as of December 31, 2020, and (2) support and justify

1 the recommended depreciation rates for the Company's assets.

2  
3 **Q.** Did you prepare any exhibits in support of your prepared  
4 direct testimony?

5  
6 **A.** Yes. I sponsor Exhibit No. (DAW-1) consisting of three  
7 Documents prepared under my direction and supervision,  
8 entitled:

9  
10 Document No. 1 List of Proceedings in which I have  
11 performed depreciation studies

12 Document No. 2 Depreciation Study

13 Document No. 3 Functional Summary Comparison of  
14 Depreciation Expense

15  
16 To the best of my knowledge, the information contained in my  
17 Exhibit is true and correct. .

18  
19 **II. TESTIMONY STRUCTURE, DEPRECIATION DEFINITION, AND STUDY**  
20 **PURPOSE**

21 **Q.** How is your prepared direct testimony structured?

22  
23 **A.** My prepared direct testimony has five sections. The first  
24 two are introductory in nature.

25

1 In Section III, I explain the property included in the Study;  
2 the four-phase approach I used to conduct the Study; and the  
3 depreciation system I used for the Study.

4  
5 In Section IV, I explain how depreciation rates are  
6 determined, including identifying the formula for  
7 depreciation rates. This portion of my direct testimony also  
8 explains and fully discusses each portion of the depreciation  
9 rate formula that is supported by my Study. Section IV is  
10 broken into the following subparts, which align with the  
11 components of the depreciation rate formula that the Study  
12 supports: (A) Depreciation Rate Formula; B) Life Estimation;  
13 (C) Theoretical Reserve; (D) Net Salvage Amounts and  
14 Percentages; (E) Remaining Life Analysis; and  
15 (F) Depreciation Accrual and Rates.

16  
17 In Section V, I discuss the change in depreciation expense as  
18 a result of the proposed depreciation rates. Specifically,  
19 I explain why Peoples depreciation expense is increasing.

20  
21 **Q.** What definition of depreciation have you used for the purposes  
22 of conducting a depreciation study and preparing your direct  
23 testimony?

24  
25 **A.** The term "depreciation," as used herein, is considered in the

1 accounting sense—that is, a system of accounting that  
2 distributes the cost of assets, less net salvage (if any),  
3 over the estimated useful life of the assets in a systematic  
4 and rational manner. Depreciation is a process of allocation,  
5 not valuation. In other words, depreciation expense  
6 allocates the cost of the asset, including any estimated net  
7 salvage (the negative of this is also known as net removal)  
8 necessary to remove the asset, as an ongoing cost of  
9 operations over the economic life of the asset. However, the  
10 amount allocated to any one accounting period does not  
11 necessarily represent an actual loss or decrease in value  
12 that will occur during that particular period. The Company  
13 accrues depreciation on the basis of the original cost of all  
14 depreciable property included in each functional property  
15 group. On retirement, the full cost of depreciable property,  
16 less the net salvage value, is charged to the depreciation  
17 reserve.

18  
19 **Q.** Please generally describe the purpose of the Study.

20  
21 **A.** The key functions of the Study are to: (1) determine the  
22 average service lives for Distribution and General Plant;  
23 (2) determine the net salvage percentages for Distribution  
24 and General Plant; (3) calculate the theoretical reserve of  
25 each property group based on the remaining life of the group,

1 the total life of the group and the estimated net salvage;  
2 (4) develop depreciation rates, including an annual  
3 depreciation accrual; and (5) develop depreciation rates for  
4 plant that Peoples will add to its rate base that currently  
5 are not currently capitalized on its books.

6  
7 **Q.** Based on the Study, what conclusions do you reach?

8  
9 **A.** I conclude that the depreciation rates developed for Peoples'  
10 utility accounts as set forth in the Study, which is sponsored  
11 by me and included as Document No. 2 of my exhibit, encompass  
12 the best and most recent information for calculating Peoples'  
13 depreciation expense associated with these assets and are  
14 reasonable and appropriate for use in recovering the cost of  
15 Peoples' assets and net salvage.

16  
17 Based on life and net salvage parameters developed and applied  
18 to forecast plant assets and depreciation reserve balances as  
19 of December 31, 2020, the depreciation rates in the Study  
20 will result in an increase in the annual depreciation expense  
21 of approximately \$4.0 million per year (excluding plant with  
22 no currently approved depreciation rates). This amount was  
23 determined by comparing the depreciation expense difference  
24 between the current depreciation rates and the proposed  
25 depreciation rates as of December 31, 2020. A functional

1 summary comparison of depreciation expense is shown in  
2 Document No. 3 of my exhibit, Schedule 1, and a more detailed  
3 comparison is shown in Appendix B of Document No. 2 of my  
4 exhibit.

5  
6 **III. PEOPLES' DEPRECIATION RATE STUDY**

7 **Q.** What is the purpose of this section of your prepared direct  
8 testimony?

9  
10 **A.** In this section of my prepared direct testimony, I describe  
11 the property included in the Study; the four-phase approach  
12 I used to conduct the Study; and the depreciation system  
13 (straight-line method, Average Life Group procedure,  
14 remaining-life technique) used for the Study.

15  
16 **Q.** Did the Company give you any specific information for  
17 conducting the Study?

18  
19 **A.** Yes. The Company gave me the following information for the  
20 Study:

21 a. Historical data to analyze for life and net salvage to  
22 assist in making recommendations for Distribution and General  
23 Plant assets based on actual historical data as of December  
24 31, 2018.

25 b. Plant and reserve balances to calculate the theoretical

1 reserves and the recommended whole life and remaining life  
2 depreciation rates, including the annual depreciation expense  
3 accrual, on forecast plant and reserve balances as of December  
4 31, 2020.

5 c. Information related to the operations, conditions, plans  
6 and programs was communicated to me from Company Subject  
7 Matter Experts and recorded in my Interview Notes.

8 d. Information regarding the new assets projected to be  
9 added during the forecast period in the gathering plant, LNG  
10 plant function, and distribution compressor function, as well  
11 as the Company's planned use of those assets.

12  
13 **Q.** What property is included in the the Study?

14  
15 **A.** There are two general classes, or functional groups, of  
16 depreciable property that are analyzed in the study:  
17 (1) Distribution Plant and (2) General Plant property. The  
18 Distribution Plant functional group primarily consists of  
19 pipe, numerous general and city gate stations, meters and  
20 associated facilities used to distribute gas to customers of  
21 Peoples. General Plant property is plant (such as office  
22 buildings) used to support Peoples' overall operations.

23  
24 **Q.** Please describe your approach to the Study.  
25

1 **A.** With the assistance of my staff, I conducted the Study in  
2 four phases as described at pages 19-21 of Document No. 2 of  
3 my exhibit. The four phases are: Data Collection, Analysis,  
4 Evaluation, and Calculation. During the initial phase of the  
5 Study, I collected historical data through December 31, 2018  
6 to be used in the analysis. After the data was assembled, I  
7 performed analyses to determine the life and net salvage  
8 percentage for the different property groups being studied.  
9 As part of this process, I conferred with field personnel,  
10 engineers, and managers responsible for the installation,  
11 operation, and removal of the assets to gain their input into  
12 the operation, maintenance, and salvage of the assets. The  
13 information obtained from field personnel, engineers and  
14 managerial personnel, combined with the Study results, was  
15 then evaluated to determine how the results of the historical  
16 asset activity analysis, in conjunction with the Company's  
17 expected future plans should be applied. The final phase is  
18 the calculation of depreciation rates and the theoretical  
19 reserve.

20  
21 The authoritative treatise, Depreciation Systems, documents  
22 the following stages of a depreciation study: "statistical  
23 analysis, evaluation of statistical analysis, discussions  
24 with management, forecast assumptions, and document  
25 recommendations. My approach mirrors this process, and

1 following this approach ensures that Alliance comprehensively  
2 and thoroughly projects the future expectations for the  
3 Company's assets. Document No. 2 of my exhibit, page 22 shows  
4 Figure 2, which demonstrates the four phases of the Study  
5 conducted for Peoples.

6  
7 **Q.** What depreciation system did you use for the Study?

8  
9 **A.** The straight-line (method), the Average Life Group ("ALG")  
10 (procedure), remaining-life (technique) depreciation system  
11 was used for this Study. This is the same methodology used  
12 by Peoples and approved by this Commission for the existing  
13 depreciation rates established in Docket No. 20160159-GU.

14  
15 **Q.** What is a survivor curve?

16  
17 **A.** A survivor curve represents the percentage of property  
18 remaining in service at various age intervals. The Iowa  
19 Curves, the predominantly used survivor curve method in the  
20 utility industry, are the result of an extensive  
21 investigation of life characteristics of physical property  
22 made at Iowa State College Engineering Experiment Station in  
23 the first half of the prior century. Through common usage,  
24 revalidation and regulatory acceptance, the Iowa Curves have  
25 become a descriptive standard for the life characteristics of

1 industrial property. For more detail on survivor curves see  
2 pages 13-16 of Document 2 of my exhibit.

3  
4 **Q.** How are survivor curves used in the Study?

5  
6 **A.** Most property groups can be closely fitted to one Iowa Curve  
7 with a unique average service life. The blending of judgment  
8 concerning current conditions and future trends along with  
9 the matching of historical data permits a depreciation  
10 analyst to make an informed selection of an account's average  
11 service life and survivor curve. When selecting an average  
12 service life, a survivor curve is also selected. When  
13 recommending depreciation rates, a depreciation analyst  
14 selects the average service life and survivor curve that are  
15 used to compute remaining life and theoretical reserve.

16  
17 **IV. DETERMINATION OF THE DEPRECIATION RATES**

18 **Q.** What is the purpose of this section of your prepared direct  
19 testimony?

20  
21 **A.** In this section, I explain how depreciation rates are  
22 determined, including identifying the formula for  
23 depreciation rates. This portion of my prepared direct  
24 testimony also explains and fully discusses each portion of  
25 the depreciation rate formula that is supported by my Study.

1 Section IV is broken into the following subparts, which aligns  
2 with the components of the depreciation rate formula that the  
3 Study supports: (A) The Depreciation Rate Formula; (B) Life  
4 Estimation; (C) Theoretical Reserve; (D) Net Salvage Amounts  
5 or Percentages; and (E) Depreciation Accrual and Rates.

6  
7 **A.** DEPRECIATION RATE FORMULA

8 **Q.** How are the depreciation rates determined?

9  
10 **A.** The formula used to derive depreciation rates calculates  
11 annual depreciation accrual amounts for each group by  
12 dividing the original cost of the asset (gross plant), less  
13 book depreciation reserve, less estimated net salvage, by the  
14 group's respective remaining life. The resulting annual  
15 accrual amounts for all depreciable property within an  
16 account are accumulated, and the total is divided by the  
17 original cost (gross plant) of all depreciable property  
18 within the account to determine the depreciation rate.

19  
20 **Q.** What portion of the formula used to derive depreciation rates  
21 is supported by the Study?

22  
23 **A.** The Study determines several pieces of the overall formula  
24 used to derive depreciation rates. The portions of the  
25 formula derived by the Study are:

1 a. Plant and Depreciation Reserve Balance: The depreciation  
2 reserve was provided by the Company with the projected gross  
3 plant balance amounts and the projected depreciation reserve  
4 as of December 31, 2020. The Study depreciation reserve  
5 balance is subtracted from gross plant.

6 b. Life Estimation: The Study describes the analytical  
7 tools used to estimate the appropriate average service lives  
8 and retirement survivor curve for each depreciable account.

9 c. Theoretical reserve: The theoretical reserve represents  
10 the portion of a property group's cost that would have been  
11 accrued as depreciation reserve if current expectations were  
12 used throughout the life of the property group for future  
13 depreciation accruals. The theoretical reserve for the asset  
14 group serves as a point of comparison to the book reserve to  
15 determine if the unrecovered investment of the asset and its  
16 removal cost are over or under-accrued.

17 d. Net Salvage Amounts or Percentages: The Study supports  
18 the overall net salvage percentages. The Study calculates  
19 and recommends the net salvage percentages for Distribution  
20 and General Plant accounts. For these plant accounts, salvage  
21 and removal cost percentages are calculated by dividing the  
22 current cost of salvage or removal, as supported by the Study,  
23 by the original installed cost of the retired asset.

24 e. Remaining Life: The Study supports the remaining life  
25 calculation by determining the appropriate average service

1 lives and retirement survivor curve for each account.

2 f. Resulting Annual Depreciation Accrual and Depreciation  
3 Rates: As discussed above, the Study calculates the  
4 depreciation rates and the annual accrual amounts are then  
5 derived from these rates. The computation of the annual  
6 depreciation rates and annual accrual amounts is shown in  
7 Appendix A of the Study and are discussed in Document No. 2  
8 of my exhibit.

9  
10 **B. LIFE ESTIMATION**

11 **Q.** What method does the Study use to analyze historical data for  
12 Distribution and General plant to estimate life  
13 characteristics?

14  
15 **A.** I analyzed all Distribution and General Plant accounts using  
16 the actuarial analysis (retirement rate method) to estimate  
17 the life of the property in each account. Depreciation  
18 analysts use models of property mortality characteristics  
19 that have been validated in research and empirical  
20 applications in much the same manner as human mortality is  
21 analyzed by actuaries .

22  
23 **Q.** How did you determine the average service lives for  
24 Distribution and General Plant?

25

1 **A.** As noted above, I used actuarial analysis and judgment to  
2 determine the appropriate average service lives for each  
3 account in the Distribution and General functions. Graphs  
4 and tables supporting the analysis and the chosen Iowa Curves  
5 used to determine the average service lives for analyzed  
6 accounts are found in the Determination of the Lives and Net  
7 Salvage section of Document No. 2 of my exhibit, pages 27-  
8 92. A summary comparison of the approved and proposed  
9 depreciable lives is shown in Appendix C and in Schedule 3,  
10 discussed in Document Nos. 2 and 3 of my exhibit,  
11 respectively.

12

13 **Q.** Please describe some of the changes in the average service  
14 lives for the various Distribution and General accounts.

15

16 **A.** For Distribution and General Accounts, there are 18 accounts  
17 with increasing lives; four accounts with decreasing lives;  
18 11 accounts where there is no change; and three accounts where  
19 no comparison is possible. Examples of some of the changes  
20 in average service lives for Distribution and General Plant  
21 are as follows:

22

23 a. The largest increases, 10 years and greater, in life  
24 were: Distribution Account 38400 House Regulators which  
25 increased by 20 years; Distribution Account 38300 House

1 Regulators by 14 years; and Distribution Account 37600 Steel  
2 Mains by 10 years.

3 Most of the accounts (15 out of 18) with increasing lives  
4 were 10 years or less. Further discussion of the increases  
5 is detailed for each account in the Study report.

6 b. The largest decreases in life were: General Account 390,  
7 Structures & Improvements, which decreased by 15 years; and  
8 Distribution Account 375, Structures and Improvements which  
9 decreased by seven years.

10 Distribution Account 381 Meters showed a two-year decrease in  
11 life, and General Account 393 Stores Equipment showed a one-  
12 year decrease in life.

13 Further discussion of the decreases is detailed for each  
14 account in the Study report.

15  
16 **Q.** What method did you use in the Study to predict the life  
17 characteristics of assets that will be added during the  
18 forecast period which currently are not part of the Company's  
19 plant-in service assets?

20  
21 **A.** Since no historical data was available for those assets, I  
22 reviewed information provided by Company personnel and  
23 reviewed the life parameters used by other natural gas  
24 utilities across the nation. The proposed lives for these  
25 accounts are shown in Appendix C of the Study and are

1 discussed in Document No. 2 of my exhibit, pages 93-98.

2  
3 **C. THEORETICAL RESERVE**

4 **Q.** What purpose does the theoretical reserve serve in the Study?

5  
6 **A.** The theoretical reserve represents the portion of a property  
7 group's cost that would have been accrued as depreciation  
8 reserve if current life and net salvage expectations were  
9 used and achieved throughout the life of the property group  
10 for depreciation accruals. The theoretical reserve for the  
11 asset group serves as a point of comparison to the book  
12 reserve to determine if the unrecovered investment of the  
13 asset and its removal cost are over or under-accrued.

14  
15 **Q.** How did you determine the theoretical reserve reflected in  
16 the Study?

17  
18 **A.** I computed the theoretical reserves in the Study based on  
19 projected plant balances as of December 31, 2020. The  
20 theoretical reserve was calculated using a reserve model that  
21 relies on a prospective concept relating future retirement  
22 and accrual patterns for property, given current life and  
23 salvage estimates. More specifically, the theoretical  
24 reserve of a property group was determined from the estimated  
25 remaining life of the group, the total life of the group, and

1 estimated net salvage. This computation for the straight-  
2 line, remaining-life theoretical reserve ratio, which I  
3 describe in more detail on page 19 of Document No. 2 of my  
4 exhibit, involved multiplying the vintage balances within the  
5 property group by the theoretical reserve ratio for each  
6 vintage.

7  
8 **Q.** Is it desirable for the depreciation reserve to conform to  
9 the theoretical reserve?

10  
11 **A.** Yes. It is desirable for the depreciation reserve to conform  
12 as closely as possible to the theoretical reserve. When  
13 remaining life rates are used, the theoretical reserve  
14 provides the basis for any over-accrual or under-accrual in  
15 setting the depreciation rates at the appropriate level based  
16 on current parameters and expectations.

17  
18 **Q.** How do the book and theoretical reserve compare in this Study?

19  
20 **A.** As shown in Document No. 2 of my exhibit, Appendix E, the  
21 theoretical reserve is lower than the book reserve, creating  
22 a surplus that is netted over the remaining life of the  
23 account and has the effect of decreasing the depreciation  
24 rate. Rates by account for Distribution and General are shown  
25 in Document No. 2 of my exhibit, Appendix B.

1 Overall, the Study found a surplus of \$245.6 million at  
2 December 31, 2020 based on the recommended life and net  
3 salvage parameters. The depreciation rates are designed to  
4 eliminate that surplus over the remaining life of the  
5 distribution depreciable assets and the average remaining  
6 life for the accounts where the Company is proposing general  
7 plant amortization.

8  
9 **Q.** How was the difference between the book and theoretical  
10 reserve handled in the Peoples' last depreciation study?

11  
12 **A.** The Florida Public Service Commission ("FPSC" or  
13 "Commission") approved the use of remaining life to amortize  
14 that amount in Docket No. 20160159-GU. This Study proposed  
15 the same methodology.

16  
17 **D.** NET SALVAGE AMOUNTS OR PERCENTAGES

18 **Q.** What is net salvage as determined for all the Company's plant  
19 assets?

20  
21 **A.** While discussed more fully in the Study itself, net salvage  
22 is the difference between the gross salvage (what the asset  
23 was sold for) and the cost of removal (cost to remove and  
24 dispose of the asset) ("COR"). If the COR exceeds gross  
25 salvage, net salvage is negative. Some plant assets can

1 experience significant negative removal cost percentages due  
2 to the amount of removal cost and the timing of any capital  
3 additions versus the retirement.

4  
5 Salvage and removal cost percentages are calculated by  
6 dividing the current cost of salvage or removal by the  
7 original installed cost of the assets retired.

8  
9 **Q.** How did you determine the net salvage percentages for each  
10 asset group in Distribution and General plant?

11  
12 **A.** I started by using an industry-standard method that divides  
13 the current cost of removal and salvage by the original  
14 installed cost of the assets retired. However, I also applied  
15 judgment also to select a net salvage percentage that  
16 represents the future expectations for each account. In  
17 applying this judgment, I compiled and considered historical  
18 salvage and removal data by account to determine values and  
19 trends in gross salvage and removal cost. The account data  
20 for retirements, gross salvage, and COR covered the period  
21 from 1983 - 2018 and is detailed in the Study. I calculated  
22 moving averages with this data, with the intent to remove  
23 timing differences between retirement and salvage and removal  
24 cost; I analyzed those moving averages over varying periods  
25 up to 10 years. These calculations are shown in Appendix D

1 of Document No. 2 of my exhibit.

2  
3 **Q.** Is it sufficient to only analyze historical data to form your  
4 life and net salvage estimates?

5  
6 **A.** No. Historic life and salvage data are the primary factors  
7 to consider in making life and net salvage recommendations  
8 but it is crucial to incorporate future trends, changes in  
9 equipment and Company-specific operational information before  
10 finally making life and net salvage recommendations. Once  
11 all the calculations and data are prepared, I applied  
12 professional judgment, considered Company expectations and  
13 trends, and evaluated the magnitude of the potential change  
14 to determine the appropriate net salvage percentages. A  
15 comparison of the approved and proposed net salvage  
16 percentages is shown in Document No. 3 of my exhibit, Schedule  
17 2 and in Document No. 2 of my exhibit, Appendix C.

18  
19 **Q.** Please describe the major changes in the net salvage  
20 percentages for the various accounts.

21  
22 **A.** The detailed analysis of each account is described fully in  
23 Document No. 2 of my Exhibit, starting at pages 24-26. Net  
24 salvage is trending toward higher negative net salvage due to  
25 the increased costs of labor, safety, and environmental

1 associated with retiring utility assets and the longer lives  
2 being experienced for many assets. For Peoples, net salvage  
3 in 12 accounts decreased (became more negative) while three  
4 increased (became less negative or more positive) 18 accounts  
5 remained unchanged, while for the remaining three accounts,  
6 no comparison could be made. Examples of some of the changes  
7 in net salvage are:

8  
9 a. The most significant changes of 20 percent or more (more  
10 negative) in net salvage percentages were in: Distribution  
11 Account 376.00, Steel Mains, which decreased from negative 40  
12 to negative 60 percent; Distribution Account 380.00, Steel  
13 Mains, which decreased from negative 100 percent to negative  
14 150 percent; and Distribution Account 380.2, Plastic  
15 Services, which decreased from negative 55 percent to  
16 negative 80 percent.

17 b. The most significant increase in net salvage percentage  
18 was for General Plant Account 396.00 which increased from a  
19 positive 5 percent to positive 10 percent net salvage.

20  
21 In addition to the account specific detail, general factors  
22 impacting removal costs are discussed in the Study. See  
23 Document No. 2 of my exhibit, pages 24-26.

24  
25 Q. How did you determine the net salvage percentages for accounts

1 where no history exists?

2

3 **A.** Currently, there is no authorized net salvage for Accounts  
4 33600 Renewable Natural Gas ("RNG"), 36400 Liquefied Natural  
5 Gas ("LNG"), and 37700 Compressor Equipment. While it is  
6 reasonable to expect cost of removal to exceed salvage for  
7 these assets, there is no historical basis at this time for  
8 a recommendation. I recommend a negative five percent is  
9 recommended for each of these assets at this time and that  
10 this recommendation be evaluated as the Company gains actual  
11 experience with these assets

12

13 **E. REMAINING LIFE**

14 **Q.** Having determined the theoretical reserve, the book reserve,  
15 calculated net salvage, please describe how you used the  
16 remaining life for each account to calculate the depreciation  
17 rates and annual depreciation accrual expense.

18

19 **A.** I used a three-step process to determine the remaining life  
20 for each account. First, I used historic data through December  
21 31, 2018 and applied judgment to estimate life and net salvage  
22 parameters. Then, I developed the vintage balances and  
23 reserves as of December 31, 2020.

24

25 Using those inputs, I estimated the remaining life for each

1 vintage in the group by applying the proposed average life  
2 and dispersion curve by vintage and computing the direct  
3 weighting remaining life for each plant account.  
4

5 **F. DEPRECIATION ACCRUAL RATES**

6 **Q.** Please describe the final steps in calculating the  
7 depreciation rates and annual depreciation accrual expense.  
8

9 **A.** I used a two step process to calculate the depreciation rates.  
10 In the first step, as discussed earlier, I used historical  
11 data through December 31, 2018, Company information and  
12 judgment to estimate life and net salvage parameters. I then  
13 used the vintage balances and reserves at December 31, 2020  
14 to compute the proposed depreciation accrual expense and  
15 rates using the estimated life and net salvage parameters.  
16

17 In the Study, I calculated the depreciation accrual rates  
18 using the same methodology as was used in developing the  
19 depreciation rates approved by the Commission in Docket No.  
20 20160159-GU. More discussion on the computation of accrual  
21 rates is found in the Study and the calculation are shown in  
22 Appendix A of Document No. 2 of exhibit.  
23

24 **V. CHANGE IN DEPRECIATION EXPENSE AS A RESULT**

25 **Q.** What is the purpose of this section of your prepared direct

1 testimony?

2

3 **A.** In this section of my prepared direct testimony, I discuss  
4 the change in depreciation expense as a result of the proposed  
5 depreciation rates. Specifically, I describe the changes in  
6 depreciation expense and explain why Peoples' depreciation  
7 expense is increasing.

8

9 **Q.** Please summarize the Study results with respect to changes in  
10 depreciation expense.

11

12 **A.** Based on the depreciation rates indicated in the Study, as  
13 applied to forecasted plant balances as of December 31, 2020,  
14 the overall change in annual depreciation expense is an  
15 increase of approximately \$3.8 million for currently existing  
16 asset classes. Document No. 3 of my exhibit, Schedule 1, shows  
17 this increase reflects an increase of \$5.9 million in  
18 Distribution, a decrease of \$2.1 million in General and a  
19 decrease of \$49 thousand for intangible property.

20

21 There are two asset types Mains (376) and Services (380) in  
22 the Distribution function, that are driving the increase.  
23 Account 37600 Steel Mains and 38000 Steel Services both saw  
24 more negative net salvage with life increases as a partial  
25 offset. Account 37602 Plastic Mains and 38002 Plastic

1 Services both retained the same average service lives and  
2 dispersion, with more negative net salvage. Since these are  
3 the Company's largest accounts, the impact is an increase in  
4 depreciation expense compared to the existing rates.

5  
6 **Q.** Have you proposed depreciation rates for certain expected  
7 plant additions?

8  
9 **A.** Yes. In the Study we have included a proposed life, net  
10 salvage and resulting depreciation rate for the Company's  
11 pro-forma plant additions which include; 33600 RNG, 36400 LNG  
12 plant, and 37700 Distribution Compressors. We understand  
13 these assets are expected to go into service in 2021.  
14 However, from an accounting perspective, having a  
15 depreciation rate to apply to an asset class when the assets  
16 are placed in service is necessary. Peoples requests a rate  
17 to apply to those assets when they are closed to plant in  
18 service, which is expected to occur by the end of calendar  
19 year 2021. The depreciation expense on these assets added in  
20 2021 is proposed to be \$2.3 million annually.

21  
22 **VI. CONCLUSION**

23 **Q.** Mr. Watson, do you have any concluding remarks?

24  
25 **A.** Yes. The Study and analysis performed under my supervision

1 fully supports setting depreciation rates at the level I have  
2 indicated in my testimony. The Company should continue to  
3 periodically review the annual depreciation rates for its  
4 property. In this way, the Company's depreciation expense  
5 will more accurately reflect its cost of operations and the  
6 rates for all customers will include an appropriate share of  
7 the capital expended for their benefit.

8  
9 The Study analysis for Peoples' depreciable property for  
10 actual plant assets as of December 31, 2018 describes the  
11 extensive analysis performed. The forecast plant balances  
12 and reserves at December 31, 2020 result in rates that are  
13 now appropriate for Company property.

14  
15 **Q.** Does this conclude your prepared direct testimony?

16  
17 **A.** Yes, it does.

## CERTIFICATE OF REPORTER

STATE OF FLORIDA     )  
COUNTY OF LEON     )

I, DEBRA KRICK, Court Reporter, do hereby certify that the foregoing proceeding was heard at the time and place herein stated.

IT IS FURTHER CERTIFIED that I stenographically reported the said proceedings; that the same has been transcribed under my direct supervision; and that this transcript constitutes a true transcription of my notes of said proceedings.

I FURTHER CERTIFY that I am not a relative, employee, attorney or counsel of any of the parties, nor am I a relative or employee of any of the parties' attorney or counsel connected with the action, nor am I financially interested in the action.

DATED this 8th day of December, 2020.

---

DEBRA R. KRICK  
NOTARY PUBLIC  
COMMISSION #HH31926  
EXPIRES AUGUST 13, 2024
