Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,
George DeMonbreun

It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,
Frank Menschner

Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills? Efficiency measures with payback. As long as 7 years still make sense if they are reducing our carbon emissions!

Most importantly:

First, when setting annual savings targets the PSC relies on the Rate Impact Measure (RIM), a test that fails to properly account for customer energy savings as a benefit. The RIM test actually considers your bill savings as a cost, rather than a benefit – because the utility company receives less revenue. Isn't the whole idea behind energy savings to cut energy waste and reduce your utility power bill?

The second problem is that the PSC allows Florida utilities to automatically and arbitrarily eliminate any efficiency measure with a payback of fewer than two years, thereby eliminating the most cost-effective and impactful efficiency measures for customers. Why do we penalize common-sense efficiency measures that can improve people's lives?

3. Identify homes, apartment buildings and commercial buildings in the top decile of energy use per square foot in their respective categories and arrange energy audits and offer financial assistance for remediation where appropriate. This process must be repeated yearly.

4. Modern heat pumps are much more efficient than older air conditioning units. Incentivize and inform commercial building owners of the cost savings with heat pumps plus geo-engineering.

5. Assist homeowners with AC units over 7 years old in updating to high-efficiency pumps as well as Bradford heat pump water heaters

6. Ask the legislature to upgrade building code to the "passive home" standard.

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,

Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,
Maureen Quinlan

Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

I would like to know what plans FPL has to build solar farms in southwest Florida. It seems imperative that if we are to survive the climate change/global warming problem, we must take advantage of the "free" solar energy coming from the sun and decrease our dependence on fossil fuels.

A long term investment in this technology will have a profound effect in the near future.

My research shows that some progress is being made in the east coast of Florida, and although we have considerable unused land in southwest Florida, there appears to be no public information about any plans to build solar plants here.

Thank you.

Sincerely,
Hamilton Agnew

Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

Here are some proposals to put in any new rule:

1. Identify homes, apartment buildings and commercial buildings in the top decile of energy use per square foot in their respective categories and arrange energy audits and offer financial assistance for remediation where appropriate. This process must be repeated yearly.
2. Modern heat pumps are much more efficient than older air conditioning units. Incentivize and inform commercial building owners of the cost savings with heat pumps plus geo-engineering.
3. Assist homeowners with AC units over 7 years old in updating to high-efficiency pumps.
4. Ask the legislature to upgrade building code to the "passive home" standard.

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,
Claude Gerstle

Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

I am urging you to update the screening practices that have left Floridians almost dead last in state rankings for energy savings and for our future generations to benefit from.

Sincerely,
José Murphy

Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

To whom it may concern,

We all know that energy efficiency means using energy smarter. ITs the fastest way to meet our energy needs, while cutting our emissions and energy waste and our bills.

Yet the practices you use in setting goals for the state's largest utilities policies have not been updated in almost 30 years. In fact, they are so outdated that no other state uses them for setting efficiency goals. It is time to bring Florida into the 21st century by using energy smarter. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right. In addition, this state is STILL in the middle of a crisis from the pandemic and we need these measures to help our families.

Sincerely,
Olivia Collins

Sent: Thursday, January 07, 2021 3:45 PM
To: Office of Commissioner Fay
Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

Florida has been lagging behind the rest of the United States in allowing alternative sources of energy to develop and be efficiently and widely distributed to its citizens.

This is not something Florida utilities don't know how to do or are, in fact, doing in other markets in which they operate. For example, years ago, FPL purchased Central Maine Power Company. CMP has for years promoted the development and distribution of alternative sources of energy. When they purchased that utility, FPL had no choice but to continue those practices because the rules and regulations of Maine demanded that they do so. As a result, Maine industry and residents have abundant and reasonably priced energy from non-fossil fuels.

FPL and other utilities have fought tooth and nail opposing renewable energy. They have spent millions of dollars to do so. They want to maintain the monopoly they have been given for decades. It is an old model and needs to be modified to allow for the State to move into the 21st Century.

Changes might have adverse short-term effects. However, in the long-term, these changes will be good for the State, its citizens and its industries including its utility companies.

Respectfully,
James Chipman Black

Subject: Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Andrew Giles Fay,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,
Charles Bertram

Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

It is especially important to note that in 2021, the overall cost of a zero-energy structure can be less than a similar structure built and operated under current energy codes, i.e., mortgage plus utility bills is less for a zero-energy structure. Furthermore, the utilities are promoting electric vehicles, which is the right thing to do. But to keep them clean as possible, it is important to install about 2 kW of renewable source such as PV to keep each vehicle charged. So, to meet the demand for electricity for electric vehicles, two things need to be done: Promote energy efficiency to free up electricity for vehicles, and encourage the installation of renewables to make up the difference. By doing so, everyone wins - consumer, utility and the planet.
