**To:** Office of Commissioner Brown  
**Subject:** Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Julie Imanuel Brown,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,  
bill matturro

**Sent:** Thursday, January 7, 2021 6:22 PM  
**To:** Office of Commissioner Brown  
**Subject:** Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Julie Imanuel Brown,

I would like to know what plans FPL has to build solar farms in southwest Florida. It seems imperative that if we are to survive the climate change/global warming problem, we must take advantage of the "free" solar energy coming from the sun and decrease our dependence on fossil fuels.

A long term investment in this technology will have a profound effect in the near future.

My research shows that some progress is being made in the east coast of Florida, and although we have considerable unused land in southwest Florida, there appears to be no public information about any plans to build solar plants here.

Thank you.

**To:** Office of Commissioner Brown  
**Subject:** Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Julie Imanuel Brown,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,  
Enrique Baloyra

**Subject:** Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Julie Imanuel Brown,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

Here are some proposals to put in any new rule:

1. Identify homes, apartment buildings and commercial buildings in the top decile of energy use per square foot in their respective categories and arrange energy audits and offer financial assistance for remediation where appropriate. This process must be repeated yearly.
2. Modern heat pumps are much more efficient than older air conditioning units. Incentivize and inform commercial building owners of the cost savings with heat pumps plus geo-engineering.
3. Assist homeowners with AC units over 7 years old in updating to high-efficiency pumps.
4. Ask the legislature to upgrade building code to the "passive home" standard.

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,  
Claude Gerstle
