**Subject:** Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Chairman Art Graham,

We all know that energy efficiency means using energy smarter. It is the quickest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

Sincerely,  
Taylor Neverman

**To:** Office of Commissioner Graham  
**Subject:** Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Chairman Art Graham,

I have worked hard to make my home efficient in Winter park Florida. From putting solar panels on to an on demand water heater, to a variable speed pool pump and insulation and LED's, I work hard to reduce my energy bill.

Please don't penalize me and others for working to make our homes more efficient.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right.

**Sent:** Friday, January 8, 2021 2:34 PM  
**To:** Office of Commissioner Graham  
**Subject:** Docket No. 20200181; Modernize Florida's outdated efficiency practices

Dear Commissioner Chairman Art Graham,

We all know that energy efficiency means using energy smarter and reducing the draw on our resources. It is the quickest, smartest, cleanest, and cheapest way to meet our energy needs while helping Floridians cut energy waste and manage power bills. Helping hard-working families make their homes more efficient, safer, and secure also keeps energy dollars in local communities. Energy companies will still get handsome profits even if we increase energy efficiency in Florida, so there are no losers when improving energy efficiency.

Yet the practices you rely upon in setting goals for the state's largest utilities haven't been modernized in almost 30 years – and that has led to Florida's largest power companies badly trailing leading utilities in the Southeast and across the nation in delivering energy savings to families and businesses. Most recently, this outdated approach led to power companies proposing goals of zero. We can and should do better.

As you set out to revisit the energy efficiency goal setting rules, please update the economic screening practices so they no longer penalize efficiency measures that meaningfully reduce energy waste for homes or businesses. Isn't the whole idea of an efficiency program, to reduce energy use to meet demand and help customers lower power bills, or are we missing something?

It's time to use the rulemaking process to modernize your decades-old practices and consider ways to get utilities to do more on efficiency, in particular for low-income customers. The rule is outdated, we must get it right. We're counting on you to do what is right. Are you up for the task?

Sincerely,
