**Subject:** Tell the PSC Why They Need to Keep Your Power Bill Low

Dear Commissioner

The voracity of FPL is just great. Defending their business and trying to grow it, is hurting all of us. Probably PSC accepts their business model as sound, but it is hurting all of us.

FPL places many obstacles for people to generate power, from which the surplus power generated by private individuals could help FPL supply power in same localities. FPL does everything they can to deter people from generating power.

FPL power transportation requires land, when they could use surplus solar power generated by people to redistribute it in same locality where the power is generated. FPL is inclined on big power plants to later transport it where it is used.

There are already step down transformers in every locality where power is consumed. All that is needed now is power storage in every locality, where there are step down transformers.

Now FPL wants to raise power rates to grow. Their practices are dubious.

FPL generates tons of nuclear waste per year from their 3 nuclear reactors in Turkey Point.

What do they do with the nuclear waste?? Nuclear material becomes inert after 100,000 years.

Thank you,

Juan Trevino
