Re: Docket #20200226-SU

Commissioners of the Public Service Commission:

I am a property owner at 8738 Marsh Street on Little Gasparilla Island, which is a property within the service area of the proposed central sewer system, Docket #20200226-SU.

I formally object and request that PSC deny Environment Utilities (EU) application for Original Certificate of Authorization for this proposed central sewer system.

While I feel strongly that the barrier islands and low lying inland areas of the state should be swiftly migrated to a sewer system to protect our fragile ecosystem, I am concerned that the current proposal is deeply flawed.

Turning a project of this magnitude over to an LLC that has zero experience with installing or operating a sewer system is unacceptable. Environmental Utilities lacks both the experience as well as the capital to take responsibility for the proposed massive undertaking that will impact some of the most delicate, unspoiled areas of the SW Florida coast. The proposed solution leaves many critical questions unanswered about right-of-way access and how the many points of failure involved with a 'low pressure' sewer system would be effectively managed in the harsh climate presented on the barrier islands.

Charlotte County should be held responsible to implement and manage the project directly. It is clear that they are trying to find any bidder to insulate them from the obligations of managing this important work. Turning this over to an inexperienced, under-capitalized, for-profit LLC with the county maintaining no accountability for the outcome is not the right move for the environment, property owners in the affected areas or the citizens and visitors of Florida at large.

Regards,
Jeff and Melissa Bashore
