Projected Unit Credit Cost Method.

Discount Rate:

Determination:	2.50% per annum, 3.25% previous year.
Reconciliation:	2.51% per annum, 2.50% previous year.

These rates were selected by the employer last year and are now based on the expected cash payments and the FTSE above market AA yield curve.

Mortality:

Pri-2012 Total Dataset Employee, Retiree, and Disability Mortality Tables projected with Scale MP-2020.

Health Care Cost Trend Rate:

5.00%

Amortization of Gain/Loss:

Since all of the participants in the plan are inactive, the gain/loss outside the 10% corridor is amortized over the average life expectancy of the inactive population.

Data:

It was assumed that retirees less than 65, retired prior to 2012 with no benefits after age 65.

Actuarial Methods and Assumptions

Baseline Costs:

The annual per person costs assumed for the current retiree population are based on the experience for Chesapeake Retirees:

Age	Medical Base Cost	Drug

75-79	3,825	3,130
80-84	4,057	3,319
85+	3,864	3,161

Prior Year:

Age	Medical Base Cost	Drug
Under 55	\$8,092	\$1,156
55-59	9,186	1,312
60-64	10,935	1,562
65-69	2,946	2,410
70-74	3,580	2,929
75-79	3,692	3,020
80-84	3,915	3,203
85+	3,729	3,051

The baseline costs are derived from a combination of actual costs and national data on retiree medical and drug costs.
