Subject: Outrageous rates

Duke energy charging outrageous rates for electric monthly.

Subject: Outrageous charges

Outrageous charges, makes it difficult for people to live and or continue making a living. Outrageous charges leads to a number of heart attacks and deaths which heartless people like them seem to care less about. They refuse to lower their rates to help contribute to a healthier lifestyle for all and help save mental health. They are failing to contribute to a better affordable way of living, which would be a way to contribute to a better future for all especially for children who will on day be adults as we are today. They refuse to lower the communities electric bill in Ocala where most of these communities are homes of retired people, gov., and veterans. Equal opportunity applies for all, so the resolution is for them to lower the electric bills a all everywhere, especially for all in Ocala, FL. Please & Thank you. My mom has a very dangerous disability and if it were your family regardless of race, religion, etc you too would say that the electric companies actions of raising rates and refusing to lower electric costs would be totally unacceptable. The average retire, and or disabled ones don't make much, and their electric bill regardless of usage should always be less than 150.00 each month. I contribute to the bills and even for me it's outrageous because I am not making much yearly. This year, which is considered recession still, I'm not even making at least 30,000 because businesse(s) can't seem to have me work 40 hours each week and also the pay rate sucks. People can't even live enough with 15/hour pay rate which I am not receiving anyway. So if you care less just remember if it were you how you would feel and never say never because it's not right for it to happen to anyone.
