Docket No. 20200181; Put us on a path to lower power bills through energy efficiency

Good morning,

Please place the attached emails in Docket No. 20200181.

Hannah E. Branum

Executive Assistant to Commissioner Clark

Florida Public Service Commission

2540 Shumard Oak Blvd.

Tallahassee, FL 32399

(850) 413-6004

Subject: Docket No. 20200181; Put us on a path to lower power bills through energy efficiency

Dear Commissioner Gary Clark,

We are paying power bills that are higher than ever. Just as we are dealing with higher housing costs and general inflation, we are being hit with record increases in charges for higher and volatile fuel costs on bills.

Paying sky-high electricity bills isn't sustainable for many Floridians – but there is an opportunity to change the course we're on. Please put us on a path to lower bills by adopting an energy efficiency rule that will provide greater access to energy saving programs for hard working families.

Access to meaningful energy efficiency programs can help customers most in need manage higher power bills. Additionally, using energy smarter saves the utility money by reducing the amount of fuel burned to generate electricity – an economic benefit for all customers. It's a win-win solution that can only be realized if you modernize your rule to discourage outdated practices that depress energy efficiency potential and reward energy waste.

Please adopt an energy efficiency rule that makes Florida a leader in capturing energy savings for families and businesses. Let's modernize our practices to put energy savings to work for Florida's families, businesses, and the state.

cc: Governor DeSantis

Sincerely,
Ai Streaker

Dear Commissioner Gary Clark,

We are paying power bills that are higher than ever.

Florida is the Sunshine State.

I _manufacture_ from _free_ Sunshine, 17,400kwh per year, enough for all my needs including my 100% electric vehicle.

I help keep our skies clean by _not_ using polluting fossil fuels using renewable energy, provided by the sun.

You need to promote this for all residents of Florida

In Connecticut, I installed solar panels and they pay for virtually all of my electricity usage but in Florida they tell you not to put many panels on your roof because what they produce won't cover costs that are tacked on because you have solar. I pay fuel taxes and around \$40.00 for a meter in addition to other costs. The amount of solar does not begin to cover costs. To me it feels like the electric companies and the state do not want solar power and are just going through the motions. I will no longer encourage the use of solar panels because it costs more than it saves and lets be realistic you have solar to help the environment and cut your bills.

Access to meaningful energy efficiency programs can help customers most in need manage higher power bills. Additionally, using energy smarter saves the utility money by reducing the amount of fuel burned to generate electricity – an economic benefit for all customers. It's a win-win solution that can only be realized if you modernize your rule to discourage outdated practices that depress energy efficiency potential and reward energy waste.

Please adopt an energy efficiency rule that makes Florida a leader in capturing energy savings for families and businesses. Let's modernize our practices to put energy savings to work for Florida's families, businesses, and the state.

Subject: Docket No. 20200181; Put us on a path to lower power bills through energy efficiency

Dear Commissioner Gary Clark,

We are paying power bills that are higher than ever. Just as we are dealing with higher housing costs and general inflation, we are being hit with record increases in charges for higher and volatile fuel costs on bills.

Paying sky-high electricity bills isn't sustainable for many Floridians – but there is an opportunity to change the course we're on. Please put us on a path to lower bills by adopting an energy efficiency rule that will provide greater access to energy saving programs for hard working families.

Access to meaningful energy efficiency programs can help customers most in need manage higher power bills. Additionally, using energy smarter saves the utility money by reducing the amount of fuel burned to generate electricity – an economic benefit for all customers. It's a win-win solution that can only be realized if you modernize your rule to discourage outdated practices that depress energy efficiency potential and reward energy waste.

Subject: Docket No. 20200181; Put us on a path to lower power bills through energy efficiency

Dear Commissioner Gary Clark,

We are paying power bills that are higher than ever. Just as we are dealing with higher housing costs and general inflation, we are being hit with record increases in charges for higher and volatile fuel costs on bills. Our homeowners and other residents and businesses are paying on average a 75% delivery charge for their energy. This is to support a grid and infrastructure in which they have ZERO ownership of.

Paying sky-high electricity bills isn't sustainable for many Floridians – but there is an opportunity to change the course we're on. Please put us on a path to lower bills by adopting an energy efficiency rule that will provide greater access to energy saving programs for hard working families.

Access to meaningful energy efficiency programs can help customers most in need manage higher power bills. Additionally, using energy smarter saves the utility money by reducing the amount of fuel burned to generate electricity – an economic benefit for all customers. Please adopt an energy efficiency rule that makes Florida a leader in capturing energy savings for families and businesses. Let's modernize our practices to put energy savings to work for Florida's families, businesses, and the state.

Lastly, since the State of FL has done so well financially, I suggest some funds be used to help families who are low income or elderly who may not be eligible for a Federal Tax Credit to assist offset the purchase costs of a solar energy PV system, which 1. could significantly save them money 2. reduces the stress on the utility grid, 3. Adds value to neighbors by producing micro-grids and 4. Helps reduce our carbon footprint by reduced dirty energy pollution.

Subject: Docket No. 20200181; Put us on a path to lower power bills through energy efficiency

Dear Commissioner Gary Clark,

I'd like to share some of my thoughts regarding FPL and the PSC. I'm concerned with how I see the PSC and many of the state's citizens being manipulated by by FPL, their advertising and policies.

I've invested a considerable sum of my own assets to insure my family has reliable access to affordable electric energy now and into the future. My solar panels and lithium batteries don't make my home susceptible to problems from a centralized power grid. The PSC should be developing policies that provide financial incentives for other homeowners to do the same. Instead, it seems PSC's actions discourage roof top solar in favor of FPL centralized solar power. A case in point is the monthly " minimum" charge now applied to my account for power FPL doesn't even provide, adding years to the pay back time for my equipment, that FPL uses to supplement the peak energy demands of business in my area.

I have recently flown over areas of the state where FPL has established huge solar farms. First, it should occur to the PSC that concentration of this infrastructure in this way makes the power grid more susceptible to outages from local weather, tornadoes, fire or deliberate attack. Second, the vast agricultural tracts used for the solar panels removed prime arable land from food production. Third, I and others should see this for what it really is. Just another Florida real estate scam. FPL has the citizens buy them this land as they hard sell the green energy aspects of solar power through their public relations advertisements. Then FPL holds the land for some years paying a negligible tax rate on the property until it's sold for development at a huge profit as urban sprawl pushes inland.

FPL has become notorious for the underhanded methods they've employed to further their business expansion. and silence criticism. They advertise equipment for lease to their customers purported to protect the customer's own appliances from electrical surges entering their home through FPL's power lines. That should have raised some eyebrows at the PSC, as it's a blatant conflict of interest. To add further insult to its captive customers the charges FPL makes, in relation to the cost of the devices they install soon has the customer paying endless fees for something they could have purchased many times over.

I'd like to suggest the PSC, instead of providing first for FPL should explore ways for Florida's citizens to in some small way escape the clutches of this monopoly. Shared access to the electric transmission lines could allow businesses and neighborhood home owners to form their own mini utility companies, banding together to sell their own rooftop solar for something better than the pittance FPL pays under net-metering. This would strengthen and add resilience to the grid while giving the citizens of Florida the freedom to escape FPL's slavery.

cc: Governor DeSantis

Sincerely,
Michael Wier

Subject: Docket No. 20200181; Put us on a path to lower power bills through energy efficiency

Dear Commissioner Gary Clark,

We are paying power bills that are higher than ever. Just as we are dealing with higher housing costs and general inflation, we are being hit with record increases in charges for higher and volatile fuel costs on bills.

Paying sky-high electricity bills isn't sustainable for many Floridians – but there is an opportunity to change the course we're on. Please put us on a path to lower bills by adopting an energy efficiency rule that will provide greater access to energy saving programs for hard working families.

Access to meaningful energy efficiency programs can help customers most in need manage higher power bills. Additionally, using energy smarter saves the utility money by reducing the amount of fuel burned to generate electricity – an economic benefit for all customers. It's a win-win solution that can only be realized if you modernize your rule to discourage outdated practices that depress energy efficiency potential and reward energy waste.

Please adopt an energy efficiency rule that makes Florida a leader in capturing energy savings for families and businesses. Let's modernize our practices to put energy savings to work for Florida's families, businesses, and the state and STOP going along with this governor who has allowed you to screw the residents of Florida.

cc: Governor DeSantis

Sincerely,
Janis Bee

Dear Commissioner Gary Clark,

I strongly support increasing energy efficiency in our state, especially since without it we will be paying even more for our power. I hope that you will lead the way and make Florida a great example. cc: Governor DeSantis
