Good day Commissioners and State officials:

This email is in reference to docket #20240032-SU. As a homeowner/property owner on Little Gasparilla Island at 9506 Don Jose Court, we formally OBJECT to the EU's Application for certification of wastewater services. We are asking the PSC to DENY the application.

As there are many many reason to DENY this application, I personally feel the expenses which would occur such as:

- The hook-up cost alone would be such a financial strain that it would force us to sell and move from LGI or cause much financial hardship in our older years.
- The electrical would a separate electric panel, installed by a licensed electrician at the expense of the homeowner. If I was maxed out on my main electric grid with pool equipment or other large-draw items, the panel would need an expensive upgrade.
- Landscaping cost – removal of trees and other landscaping would be an owner expense
- Expense of the crushing and filling of my existing septic tank and installation of new one.
- Disruption of our island life – increase traffic with construction vehicles

A question for the commissioners:

1. Has there been water quality testing done which would prove the need for a sewer system?
2. What is the plan for right-of-way or easements? What rights are we give up?
3. Is there a need of this service? What evidence has been provided to support the need for service?

As stated above, please DENY the EU's application. LGI does not need sewer management from outside.

Thank you for your consideration.
