Please deny EU's application for wastewater service

The raw sewer leaks from counties n cities are the main impact on the eco system! If That a thousand septic systems that had a leak or issue would never add up to the 23000 gallons of raw sewage the charlotte county had spilled into the gulf a couple weeks ago! Can the county defend that? How the county n puta gorda pump the waste water into the aquifer, and then the raw sewage comes up in a natural spring that comes out and share the Harbor! This is all on the red tide web site! Naples does the same thing and it comes out in Dog pass! That the worst red tide out break was a couple years ago when long boat key had 11 million gallons of raw sewage dump into the bay from a broken pipe on a bridge! The same time Tampa had a construction accident that released over 6 million gallons of raw sewage and the released 2 millions of waste water from the phosphate lakes and there was another incident in sarasota county that dumped another 3 million gallons of raw sewage into the gulf waters! This alone explains why sewer systems are bad for the environment!
