Dear Florida Public Commission:

I would just like to file my objection to Environmental Utilities LLC or any company to provide wastewater services on Palm Island.

The resort on the island has caused endless headaches in attempting to get services for the business at the collective homeowner's expense. This also includes "beach renourishment" that essentially was designed to add beach front to the business's resort which at the time was suffering from erosion. It has been successful for his business interests again to the detriment and expense of the homeowners on the island.

The "grounds" of the objection for installation of wastewater services is *that it is not needed*. The septic systems that everyone has already paid for with their homes are sufficient. The fact that many of these are second homes is even more reason that the septic systems currently installed are sufficient.

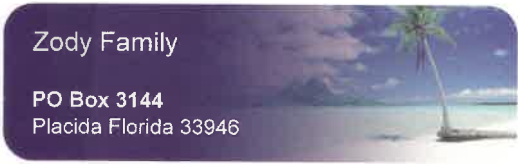

The resort is the only entity that would benefit which has turnover and volume from rentals.

Thanks again,

Billie Zody
