Subject: Energy efficiency measures are a proven means to reduce household energy bills.

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

Dear Commissioner Andrew Fay,

Florida is at a key crossroads for improving energy affordability.

Electric utility rates in our state have increased sharply in the last few years, due largely to the increased cost of natural gas needed to produce much of our electricity. This has led to higher energy bills that strain household finances. And unless preventative measures are taken, extreme heat increases will hit households already struggling to afford these bills the hardest.

Energy efficiency measures are a proven means to reduce household energy bills. These measures put more money back into the pockets of Floridians while also contributing to safer and healthier housing, grid stability through peak load reduction, good-paying trade jobs, and decreased air pollution from power generation.

Currently, there are unprecedented opportunities to advance energy efficiency but many Floridians can't handle the up-front cost alone. Our utilities can lead the way in helping customers to take advantage of efficiency measures, from which everyone will benefit.

I ask that the PSC reconfigures how cost-effectiveness analysis is done and requires utilities to implement more robust energy efficiency programs to save people like me, a Florida ratepayer and a taxpayer, money in the years to come.

Sincerely,
Sandra Smallwood-Beltran

Electric utility rates in our state have increased sharply in the last few years, due largely to the increased cost of natural gas needed to produce much of our electricity. This has led to higher energy bills that strain household finances. And unless preventative measures are taken, extreme heat increases will hit households already struggling to afford these bills the hardest.

Energy efficiency measures are a proven means to reduce household energy bills. These measures put more money back into the pockets of Floridians while also contributing to safer and healthier housing, grid stability through peak load reduction, good-paying trade jobs, and decreased air pollution from power generation.

Currently, there are unprecedented opportunities to advance energy efficiency but many Floridians can't handle the up-front cost alone. Our utilities can lead the way in helping customers to take advantage of efficiency measures, from which everyone will benefit.

I ask that the PSC reconfigures how cost-effectiveness analysis is done and requires utilities to implement more robust energy efficiency programs to save people like me, a Florida ratepayer and a taxpayer, money in the years to come.

Sincerely,
Michael McConney

Dear Commissioner Andrew Fay,

As someone who is looking into energy efficiency measures personally in the future, as well as looking into energy transitioning my college school districts, I would implore you to reconsider your consensus on the cost-effectiveness of energy efficiency measures.

As these measures when enacted will save us Floridians money in the long-term and reduce the need for constant energy usage. Not enacting these measures as soon as possible will strain our wallets as well as our power grid and will cost you all and everyone else way more in the long-term.

Beyond these measures being simply to provide Floridians consistent energy usage, these measures will also safeguard people against extreme heat waves and other such events in the times to come. Not enacting these measures in regards to weather events will only cause more damage to be cleaned up and require more money TO clean up as opposed to implementing such measures in the first place.

Not only do these measures provide safer housing, but also helps to create jobs within clean energy sectors as well as decrease overall air pollution in the state. Not enacting these measures in regards to jobs and overall health of the community will only cost people their jobs and their ability to go outside and get involved with their communities.

While Floridians currently can't handle the up-front cost alone. Our utilities CAN lead the way in helping customers to take advantage of efficiency measures, from which everyone, including poorer households and forgotten communities, will benefit.

I ask that all of you, as part of the PSC, reconfigure how cost-effectiveness analysis is done and acquire utilities to implement more robust energy efficiency programs to save people like me money, as well as the personal health and well-being of our citizens in the years to come.

Sincerely,
Sam Cuchens
