Subject: RE: Docket number 20240025: I urge to stop Duke Energy's rate increases and to retire harmful coal plants

Good Morning,

We will be placing your comments below in consumer correspondence in Docket No. 20240025-EI and forwarding your comments to the Office of Consumer Assistance and Outreach.

Sincerely,

Brian Schultz
Commission Deputy Clerk II
Florida Public Service Commission
2540 Shumard Oak Boulevard
Tallahassee, Florida 32399

Dear Florida Public Service Commission,

We have seen and continue to experience the disastrous impacts of man-made climate change. As another hurricane season is upon us, we hope and pray that our slice of paradise will be spared. It's long overdue to make the transition from fossil fuel power production to renewable sources of energy. It may cost more in the beginning, but the consequences of doing nothing will cost us so much more. The time is now to retire coal fueled power plants and replace with state of the art green technology. I'm watching closely how my representative act and will take the appropriate action at the ballot box. Green Power for Blue Skys!

To the Florida Public Service Commission,

- 1) Duke must prioritize the retirement of outdated and environmentally harmful coal plants, particularly Crystal River Units 4 and 5, to mitigate air and environmental pollution.
- 2) The continued operation of these coal plants poses significant health risks to residents, including respiratory diseases, heart issues, and premature death, highlighting the urgent need for retirement.
- 3) Coal burning contributes to greenhouse gas emissions and exacerbates climate change, threatening Florida's coast and increasing the severity of hurricanes, necessitating a transition to cleaner energy sources.
- 4) Low-income communities, such as those near Crystal River, bear disproportionate health burdens from coal pollution, underscoring the need for equity in environmental decision-making.
- 5) Transitioning from coal to renewable energy sources not only reduces pollution but also lowers costs for consumers, aligning with both economic and environmental sustainability goals.

The retirement of coal units by 2030 is imperative for the health, environment, and economic well-being of Florida residents, requiring decisive action from Duke Energy.

Thank you for considering my comment.

Sincerely,

Steve Anderson
