Re: Docket Nos. 20240025-EI, Duke Energy Florida Petition for Rate Increase

Dear Mr. Teitzman,

On behalf of Intervenors Florida Rising and League of United Latin American Citizens (“LULAC”), I have enclosed the testimony and exhibits of Karl Rábago. Please file these documents in Docket No. 20240025-EI. Please contact me if there are any questions regarding this filing.

TESTIMONY OF KARL R. RÁBAGO

ON BEHALF OF

FLORIDA RISING AND LEAGUE OF UNITED LATIN AMERICAN CITIZENS

JUNE 11, 2024

1 **I. INTRODUCTION AND WITNESS QUALIFICATIONS**

2 **Q. Please state your name, business name and address, and role in this matter.**

3 A. My name is Karl R. Rábago. I am the principal of Rábago Energy LLC, a Colorado
4 limited liability company, located at 1350 Gaylord Street, Denver, Colorado. I
5 appear here in my capacity as an expert witness on behalf of the Florida Rising (“FL
6 Rising”) and League of United Latin American Citizens of Florida (“LULAC”) (“FL
7 Rising/LULAC”).

8

9 **Q. Please list your formal educational degrees.**

10 A. I earned a Bachelor of Business Administration in Management from Texas A&M
11 University in 1977, a Juris Doctorate with Honors from The University of Texas
12 School of Law in 1984, a Master of Laws in Military Law from the U.S. Army Judge
13 Advocate General’s School in 1988, and a Master of Laws in Environmental Law
14 from the Pace University Elisabeth Haub School of Law in 1990.

15

16 **Q. Please summarize your experience and expertise in the field of utility
17 regulation.**

18 A. I have worked for more than 33 years in the utility industry and related fields,
19 following my honorable discharge from the U.S. Army, where I served as an
20 Armored Cavalry officer and a Judge Advocate. I am actively involved in a wide
21 range of utility regulatory and ratemaking issues across the United States. My
22 previous employment experience includes Commissioner with the Public Utility
23 Commission of Texas, Deputy Assistant Secretary with the U.S. Department of
24 Energy, Vice President with Austin Energy, Executive Director of the Pace Energy
25 and Climate Center, Managing Director with the Rocky Mountain Institute, and

1 Director with AES Corporation, among others. My resume is attached as Exhibit
2 KRR-1.

3
4 **Q. Have you ever testified before the Florida Public Service Commission**
5 **(“Commission”) or other regulatory agencies in the past?**

6 A. Yes. I appeared as an expert witness in Commission Docket Numbers 130199-EI,
7 130200-EI, 130201-EI, 130202-EI, 150196-EI, 160186-EI, 20200176-EI, 20210015-
8 EI, and 20240026-EI. In the past twelve years, I have submitted testimony,
9 comments, or presentations in utility proceedings in Alabama, Arkansas, Arizona,
10 California, Colorado, Connecticut, District of Columbia, Florida, Georgia, Guam,
11 Hawaii, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland,
12 Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Nevada, New
13 Hampshire, New York, North Carolina, Ohio, Pennsylvania, Puerto Rico, Rhode
14 Island, Texas, Vermont, Virginia, Washington, and Wisconsin. I have also testified
15 before the U.S. Congress and have been a participant in comments and briefs filed at
16 several federal agencies and courts. A listing of my previous testimony is attached as
17 Exhibit KRR-2.

18
19 **Q. Does your experience give you insights into the responsibilities and duties of the**
20 **Board in this proceeding?**

21 A. Yes. As a public utility commissioner in Texas, I participated in making decisions on
22 hundreds of rate review, rulemaking, and planning decisions in cases involving
23 investor-owned, municipal, and cooperative electric and telephone utilities. Those
24 matters ranged widely, from ministerial annual interest rate approvals, for example,
25 to prudence and rate decisions on a \$12.4 billion nuclear power plant, to mergers and

1 acquisitions. I have appeared before hundreds of commissioners and board members
2 in formal, informal, and educational proceedings in the years since. I have
3 contributed to the writing and passage of laws and rules in many jurisdictions and
4 have made a career of advancing regulatory and market opportunities for competitive
5 alternatives to monopoly control of essential services businesses. I remain honored
6 to have served as a utility regulator and remain deeply respectful of the public
7 interest obligation that comes with the job.

8 9 **II. OVERVIEW OF TESTIMONY AND RECOMMENDATIONS**

10 **Q. Please provide an overview of your testimony in this proceeding.**

11 A. My focus in this testimony is on the spending and associated rates proposed by Duke
12 Energy Florida, LLC (“DEF” or the “Company”), a wholly owned subsidiary of
13 Duke Energy Corporation (“Duke”). I explain how DEF proposes to regressively
14 increase economic burdens on its residential customers as a condition of electric
15 service. DEF seeks the Commission’s support in order to inflate profits for Duke.

16 In this testimony I point out how DEF’s residential customer electric bills are
17 already high and would, if the Commission accepts DEF’s proposals, go even higher.
18 I show how current and proposed rates excessively burden low users of electricity,
19 who are DEF’s lower income customers.

20 Taken as a whole, this rate application by DEF and Duke reflects an
21 aggressive, unjustified, and unreasonable effort to increase the price that DEF
22 customers must pay for essential electric service, with the burdens of this unjust
23 profit taking intentionally weighted on and shifted to the Florida citizens least able to
24 bear the economic hardships. Overall, the DEF and Duke proposal is inconsistent
25 with sound rate making principles, including cost causation, economic efficiency,

1 gradualism, and fair apportionment of costs.

2 I identify several key drivers of DEF's proposed rate increases and explain
3 how adjustments to those proposals could mitigate some of the negative impacts on
4 DEF's customers, improve the efficiency of DEF's rates, and encourage more
5 efficient use of electricity by all customers.

6

7 **Q. What are the key elements of DEF's proposed rates and rate increases?**

8 A. DEF and Duke request rate increases in 2025, 2026, and 2027 of \$593 million, \$98
9 million, and \$129 million, respectively. So, this case is about DEF proposing to lock
10 in \$820 million in rate increases over the next three years, cumulatively over \$2
11 billion over three years.¹

12

13 **Q. What are the key drivers for these proposed rate increases?**

14 A. DEF proposes the rate increases in order to pay for dismantlement and retirement, to
15 make up for decreases in sales, to accelerate depreciation costs, to build some 1,050
16 MW in new generation, to significantly increase transmission and distribution
17 spending, to extend the life of its fossil fuel generation plants, and to maintain and
18 increase its profits.² As part of its generation expansion, DEF proposes to expand its
19 "Clean Energy Connection" program, which requires ordinary customers to
20 subsidize solar energy subscriptions primarily to benefit business and institutional
21 customers with bill reductions.³ And DEF also proposes to charge customers for
22 experimental and pilot projects relating to storage and hydrogen and related projects
23 under its "Vision Florida" spending proposals.⁴

24

25

1 **Q. Are the proposed rate increases by DEF driven by increased customer growth**
2 **or customer use of electricity?**

3 A. No. DEF has seen only a 1.72% cumulative average growth rate (“CAGR”) in the
4 number of residential customers over the past ten years (2013-2023), and projects
5 only a 1.75% CAGR over the years 2024-2027.⁵ DEF retail electric sales over the
6 period 2013-2023 grew only at a CAGR of 1.51% for residential customers and are
7 expected to decline by 0.17% over the years 2024-2027.⁶ DEF’s summer and winter
8 retail peak demand grew only at a rate of 1.35% and 0.60%, respectively, over the
9 years 2013-2023, with summer retail peak demand expected to decline by 0.36% and
10 winter peak demand expected to grow by only 0.31% over the period 2024-2027.⁷

11 **Table KRR-1: DEF Metrics of Growth, Historical and Projected**

12

Cumulative Average Growth Rate (%)			
	Historical (2013-2023)	Projected (2024-2027)	Change
Residential Customer Count	1.72%	1.75%	0.03%
Residential Retail Sales	1.51%	-0.17%	-1.68%
Summer Peak Demand	1.35%	-0.36%	-1.71%
Winter Peak Demand	0.60%	0.31%	-0.29%

13
14
15
16

17 **Q. How do DEF spending proposals stack up against DEF growth metrics?**

18 A. DEF spending is vastly out of proportion to key DEF growth metrics. DEF proposes
19 69% average annual growth in transmission spending over the years 2025-2027, and
20 32% average annual growth in distribution spending over the same period.⁸

21
22
23
24
25

Table KRR-2: DEF Recent and Proposed Transmission and Distribution Spend

Transmission Spending, without SPP (\$ Millions)							Average
	2023	2024	2025	2026	2027	(2025-2027)	
Total	\$ 510.3	\$ 578.4	\$ 503.8	\$ 416.2	\$ 407.3	\$ 442.4	
Less: Growth	\$ 376.5	\$ 324.9	\$ 272.9	\$ 320.7	\$ 311.7	\$ 301.8	
Total Net of Growth	\$ 133.8	\$ 253.5	\$ 230.9	\$ 95.5	\$ 95.6	\$ 140.7	
Growth as % of Total	74%	56%	54%	77%	77%	69%	

Distribution Spending, without SPP (\$ Millions)							Average
	2023	2024	2025	2026	2027	(2025-2027)	
Total	\$ 575.1	\$ 572.9	\$ 571.9	\$ 570.5	\$ 575.6	\$ 572.7	
Less: Expansion	\$ 199.0	\$ 109.6	\$ 191.2	\$ 196.0	\$ 200.9	\$ 196.0	
Less: Major Projects	\$ 102.0	\$ 167.6	\$ 170.4	\$ 212.1	\$ 204.0	\$ 195.5	
Total Net of Growth	\$ 274.1	\$ 295.7	\$ 210.3	\$ 162.4	\$ 170.7	\$ 181.1	
Growth as % of Total	47.7%	51.6%	36.8%	28.5%	29.7%	32%	

Q. How else can the Commission appreciate DEF’s overbuilding and excessive spending in Florida?

A. DEF reveals its overbuilding in generation, which also drives other costs such as transmission spending, in its extremely high reserve capacity margins.⁹ DEF’s loss of load probability statistics and reserve margins vastly exceed targets set with the Florida Reliability Coordinating Council as well.¹⁰

Table KRR-3: DEF Current and Projected Peak Reserve Margins

DUKE ENERGY FLORIDA								
RESERVE MARGIN AT THE TIME OF								
YEAR	WINTER PEAK				SUMMER PEAK			
	TOTAL CAPACITY AVAILABLE	SYSTEM FIRM WINTER PEAK DEMAND	RESERVE MARGIN		TOTAL CAPACITY AVAILABLE	SYSTEM FIRM SUMMER PEAK DEMAND	RESERVE MARGIN

2026	11,807	8,979	2,828	31%	11,773	8,814	2,959	34%
2027	11,984	9,004	2,980	33%	10,929	8,868	2,062	23%

DUKE ENERGY FLORIDA								
WITHOUT THE 2023-2027 COMBINED CYCLE HEAT RATE UPGRADES, THE 2025-2027 SOLAR ADDITIONS, AND THE 2027 BATTERY ADDITIONS								
RESERVE MARGIN AT THE TIME OF								
YEAR	WINTER PEAK				SUMMER PEAK			
	TOTAL CAPACITY AVAILABLE	SYSTEM FIRM WINTER PEAK DEMAND	RESERVE MARGIN		TOTAL CAPACITY AVAILABLE	SYSTEM FIRM SUMMER PEAK DEMAND	RESERVE MARGIN	
	MW	MW	MW	% OF PEAK	MW	MW	MW	% OF PEAK
	2023	12,359	8,204	4,155	51%	11,843	8,270	3,574
2024	12,244	9,163	3,081	34%	11,371	8,899	2,473	28%
2025	11,928	8,954	2,974	33%	11,569	8,728	2,840	33%
2026	11,598	8,979	2,619	29%	11,290	8,814	2,476	28%
2027	11,598	9,004	2,594	29%	10,320	8,868	1,452	16%

1 **Q. Can the impacts of DEF historical spending be seen in DEF residential**
 2 **customers' average bills?**

3 A. Yes. Based on data that DEF submits to the U.S. Energy Information Administration
 4 (“EIA”) and reported as of 2023, average DEF residential bills are about \$187 per
 5 month based on average monthly usage of about 1,034 kWh per month.¹¹ This places
 6 DEF residential bills fifth highest in the nation among utilities with more than
 7 100,000 residential customers, and the proposed increases would take bills even
 8 higher.

9
 10 **Q. What does DEF propose for residential energy and demand charges over the**
 11 **next three years?**

12 A. DEF proposes to increase residential energy and demand charges, which are
 13 collected through a single volumetric rate, by between 21% and 34%, depending on
 14 the season and usage level. DEF proposes that these increases be applied
 15 regressively, with more of the increase going to low users of electricity, who are
 16 often lower-income customers as well.¹²

17 **Table KRR-4: DEF Proposed Residential Energy and Demand Charge**
 18 **Increases**

Usage Level / Season	2024	2025		2026		2027		Cumulative % increase (2025-27)
	Rate	Proposed Rate	% Increase (YR)	Proposed Rate	% Increase (YR)	Proposed Rate	% Increase (YR)	
0 - 1,000 KWH (Winter)	7.919	8.867	12.0%	9.085	2.5%	9.559	5.2%	20.7%
Over 1,000 KWH (Winter)	9.088	10.308	13.4%	10.531	2.2%	11.019	4.6%	21.2%
0 - 1,000 KWH (Non-Winter)	6.830	8.448	23.7%	8.703	3.0%	9.160	5.3%	34.1%
Over 1,000 KWH (Non-Winter)	7.730	9.156	18.4%	9.403	2.7%	9.848	4.7%	27.4%

19
 20
 21
 22
 23 **Q. What recommendations do you offer in this testimony to address these issues**
 24 **and DEF’s proposals to further increase customer bills for electricity service?**

25 A. In this testimony, I present a number of recommendations designed to reduce the

1 outsized electric bills and energy burdens faced by DEF’s residential customers.

2 These recommendations include:

- 3 (1) Ending use of the residential minimum bill and replacing it with a customer
4 charge based on basic customer cost;
- 5 (2) Reducing DEF’s ROE to 9.50%;
- 6 (3) Disallowing use of the proposed method for cost allocation and substitute a 12
7 CP and 50% AD cost allocation, without using the principal of “gradualism”
8 to shift additional costs onto residential customers;
- 9 (4) Eliminating growth, expansion, and major project spending for transmission
10 and distribution unless and until a benefit cost analysis (“BCA”) is completed;
- 11 (5) Eliminating spending for Vision Florida projects unless and until a BCA is
12 completed;
- 13 (6) Requiring DEF to produce BCAs to support all requests for capital spending
14 projects for \$1 million or more.

15
16 **III. FOUNDATIONAL DATA ON FLORIDA RESIDENTIAL ELECTRIC BILLS**

17 **Q. Why are you focused on electric bills for residential customers?**

18 A. Improvements in affordability are a core objective for Florida Rising and the League
19 of United Latin American Citizens. All Florida customers must use electricity to
20 survive—to provide air conditioning and heat, and in the future, to provide motive
21 power for transportation and thermal energy for processes and cooking. In high-use
22 parts of the country like Florida, rates alone are not a meaningful or satisfactory
23 indicator of electric utility performance. Utility energy bills, and bills as a percentage
24 of household income—an affordability metric known as energy burden—are a key
25 indicator of fairness, reasonableness, and justice. Affordability must be a key

1 performance metric for DEF and any electric service provider.

2

3 **Q. What do we know about average residential electricity usage in Florida?**

4 A. According to the EIA data, which relies on inputs submitted by DEF and other
5 utilities, the average monthly level of electricity usage by DEF residential customers
6 in Florida is 1,034 kilowatt-hours (“kWh”) per month.¹³ Lower-income customers
7 across the U.S., on average, use less energy but spend a greater percent of their
8 income on energy costs compared to higher-income customers. According to 2020
9 EIA Residential Energy Consumption Survey (“RECS”) data,¹⁴ there is a clear
10 correlation between income and electricity use, with lowest income customers
11 consuming as little as half as much energy annually compared to their wealthiest
12 counterparts. Florida is in the South region and South Atlantic sub-region. The
13 correlation between energy use and income level is also true in Florida.

14 **Figure KRR-1: U.S. Mean Annual Household Energy Consumption by Income**
15 **Category and Region 2020, million Btu)**

25

1 Lower income customers, despite using less energy, also suffer from a higher
2 energy burden than higher income customers—their energy bills constitute a higher
3 share of their household income.
4

5 **Q. Why is it important to understand when customers have high energy burdens?**

6 A. Customers with high energy burdens are vulnerable to rate and bill volatility. Month-
7 to-month changes in rates that might not frustrate the household budgets of well-to-
8 do customers can cause rate shock to customers with high energy burdens. Low-
9 income customers often live on the edge of economic or energy insecurity—an
10 inability to meet basic household energy needs that is sometimes referred to as the
11 “heat (or cool) or eat” dilemma.¹⁵ An unaffordable electric bill can create a long-
12 lived cascade of household economic problems, made worse with pancaking fees
13 and charges from utilities and other businesses. Energy insecurity is not just an
14 economic issue, but a social and public health matter as well.¹⁶ For these and other
15 reasons, understanding customer energy burdens informs the prudence and adequacy
16 of the generation supply mix that a default service provider assembles on behalf of
17 customers.
18

19 **Q. What does the data tell us about energy burdens in Florida?**

20 A. The U.S. Department of Energy’s Office of Energy Efficiency and Renewable
21 Energy has created a Low-Income Energy Affordability Data Tool (“LEAD Tool”)
22 that documents key affordability metrics across the U.S.¹⁷ The latest data is from
23 2020 and shows that at that time, nearly one million Florida households had income
24 levels below 100% of the Federal Poverty Level,¹⁸ and nearly 2.4 million Florida
25 households had income levels below 200% of the Federal Poverty Level. According

1 to the Florida Department of Health, the number of Floridians living in poverty grew
 2 to 2,725,633 in 2022, based on U.S. Census data.¹⁹

3 The LEAD Tool data, provided in Table KRR-5, shows that while the overall
 4 electricity energy burden in Florida is about 2%—meaning 2% of total household
 5 income is spent on electricity—the energy burden for customers at or below the
 6 poverty level is seven times higher, at 14%, and is three and one-half times higher, at
 7 7%, for Floridians with household incomes at or below twice the poverty level. Even
 8 for households with income up to 400% of the poverty level, the electricity energy
 9 burden is 50% higher than the statewide average, as shown in Figure KRR-2.

10 **Table KRR-5: Households and Energy Burdens at or below 100% and 200% of**

11 **Federal Poverty Level**

	Households	
	Below 100% FPL	Below 200% FPL
Energy Burden (FL avg = 2%)	14%	7%
Annual Energy Cost	\$ 1,428	\$ 1,474
2020 Annual Income	\$ 10,096	\$ 21,868
Number of Households	935,353	2,385,449

Federal Poverty Level (FPL) - 2020	Household of 1	Household of 4
100% of FPL	\$ 12,760	\$ 26,200
200% of FPL	\$ 25,520	\$ 52,400

Federal Poverty Level (FPL) - 2024	Household of 1	Household of 4
100% of FPL	\$ 15,060	\$ 31,200
200% of FPL	\$ 30,120	\$ 62,400

18 **Figure KRR-2: Florida Energy Burdens by Federal Poverty Level**

1 **Q. How do high energy burdens translate into energy insecurity and energy**
2 **injustice?**

3 A. For DEF’s customers living at or below the poverty level, or even twice the poverty
4 level, there is little or no room in the household budget for unexpected costs or for
5 meeting the increased energy demands of hotter summers and extreme weather
6 events. A \$30 added household expense, for example, is one week’s worth of
7 electricity for a customer with a monthly bill of \$120 and could require months of
8 scrimping and saving to recover from. More importantly, distributional inequity in
9 the levying of new charges and rate increases has an outsize impact on highly
10 burdened households.

11
12 **Q. Can’t highly burdened households cut back on energy use or use energy more**
13 **efficiently to reduce their electric bills or the impact of those bills on household**
14 **budgets?**

15 A. No. Energy efficiency measures cost money, and even spending an extra \$20 on
16 efficient light bulbs is beyond the financial ability of household budgets facing high
17 energy burdens. The housing that low-income customers live in is as a rule highly
18 inefficient. Customers in rental properties have no control over the aspects of their
19 homes that contribute most to cooling and heating bills—insulation, air conditioner
20 and heater efficiency, windows, and major appliances. Many low-income customers
21 are also on fixed incomes and already practice energy rationing—there is little or no
22 room for further curtailment, especially for the elderly and infirm.

23
24 **Q. What does DEF know about its customers’ household income levels?**

25 A. Apparently, nothing. DEF says it “does not track or maintain information around . . .

1 income level” of its customers.²⁰

2

3 **Q. What does DEF say about the importance of maintaining affordable rates for its**
4 **residential customers?**

5 A. DEF president Melissa Seixas does not mention affordability in her testimony. No
6 DEF witnesses address customer affordability challenges or energy burdens or the
7 impact that DEF’s proposed rates will have on highly burdened customers.

8

9 **Q. In the face of the basic facts, what has DEF proposed in this rate increase**
10 **application?**

11 A. DEF proposes to increase rates and continue to recover them through an
12 unconscionably regressive assignment of those costs to its customers who can least
13 afford the burden, including through its residential minimum bill. As shown in Table
14 KRR-6, the lowest users of electricity—who are also amongst DEF’s least-wealthy
15 customers—pay an effective rate more than 300% higher than the biggest users.

14

15

16

17 **IV. DEF’S MINIMUM BILL FOR RESIDENTIAL CUSTOMERS SHOULD BE**
18 **ELIMINATED AND DEF SHOULD USE THE BASIC CUSTOMER**
19 **METHOD TO SET FIXED CUSTOMER CHARGES**

20 **Q. What is your recommendation to the Commission regarding DEF’S \$30**
21 **minimum bill for residential customers?**

22 A. The Commission should order DEF to eliminate its residential minimum bill because
23 it is unjust, economically regressive, and inconsistent with efficient rate design. The
24 Commission should further order DEF to use the basic customer method to set a
25 fixed residential customer charge and prohibit use of minimum distribution system

1 method to classify demand-related costs as customer costs.

2

3 **Q. What would DEF's fixed customer charge be under your recommendations?**

4 A. I cannot calculate the exact residential customer charge because the charge will be
5 impacted by my recommendations for a lower return on equity ("ROE"), a change in
6 the basic cost of service allocation method used, reductions in distribution spending,
7 reductions in customer service costs classified as customer costs, elimination of
8 uncollectible costs from customer costs, and other adjustments—all of which could
9 impact the customer charge and depend on Commission decisions. However, I can
10 state that under DEFs proposed rates and spending levels, it calculates a residential
11 fixed customer charge of \$13.67 per customer per month under its proposed 12
12 Coincident Peak and 25% average demand ("12CP & 25% AD") allocation
13 methodology,²¹ and this should be the upper limit of a just and reasonable fixed
14 customer charge for residential customers. Under existing rates, DEF's residential
15 fixed customer charge is \$12.61 per customer per month,²² which DEF proposes to
16 increase by about 8.4%.

17

18 **Q. How does DEF's minimum bill impact residential customers?**

19 A. For some 66,000 of its residential low users of electricity,²³ who are more likely to
20 be low-income customers, and for some 26,000 or 30% of customers seeking to
21 reduce their excessive DEF bills by installing residential solar, DEF's minimum bill
22 is a fixed customer charge. The rate is unjust and inconsistent with cost causation
23 principles and has economically regressive impacts on low-income customers, as I
24 discuss further in this testimony. It discourages investment in energy efficiency,
25 distributed generation, distributed storage, and other distributed energy resources.

1 **Q. How does DEF justify its use of the minimum bill approach?**

2 A. DEF makes several arguments for its minimum bill,²⁴ all of which are fundamentally
3 flawed. First, DEF argues that the minimum bill ensures that customers contribute to
4 fixed cost recovery at a level that lower usage would not capture. This argument is
5 flawed because it assumes that demand-related fixed costs should be recovered
6 regardless of usage. Low users create lower fixed costs above those created by the
7 customer's basic connection to the grid—and the latter are properly recovered in a
8 fixed customer charge calculated based on the basic customer method. Second, DEF
9 argues that seasonal customers don't pay their fair share of fixed costs under
10 traditional rate design, so a minimum bill is necessary to prevent unfair cross
11 subsidies. This argument is both cynical and flawed because DEF's unjust solution is
12 to impose a minimum bill that forces year-round low users of electricity—the poor
13 and those on low fixed incomes—to pay fixed costs that they do not cause. Third,
14 DEF argues that the minimum bill helps avoid increases in the fixed customer charge
15 that would otherwise be needed to recover demand-related fixed costs. Again, the
16 flaw in this argument is that it assumes that demand-related fixed costs should be
17 recovered in the fixed customer charge. The argument carries no weight when only
18 true customer costs are included in the fixed customer charge. Fourth, repetitively
19 and most cynically, DEF argues that if it could not impose a minimum bill on all
20 customers who, due to economic hardship, rooftop solar investment, or lifestyle, use
21 less than the average for all customers in the class, it would be forced to dramatically
22 increase customer charges to recover demand-related costs that these customers do
23 not create. And if DEF used fixed customer charges to collect these demand-related
24 costs through fixed customer charges, it argues, volumetric charges would be
25 reduced, which would weaken support for energy efficiency programs.²⁵

1 **Q. If different rate designs ultimately collect the same amount of total revenues,**
2 **does it matter how those revenues are collected?**

3 A. Yes, very much so. Fixed charges, which is how a minimum bill operates for low
4 users of electricity, are inherently regressive—they have greater cost impact on low
5 users that are often also low-wealth customers. Guaranteeing non-bypassable
6 revenues through high fixed customer charges or a minimum bill is extremely
7 desirable to DEF and Duke in order to meet the expectations for continuous profits
8 promised to investors. Keeping volumetric rates lower with a minimum bill keeps
9 consumption and growth rates up because it weakens the incentive for efficiency.
10 Guaranteeing recovery of fixed costs associated with infrastructure spending, which
11 occurs when these costs are recovered through a non-bypassable fixed customer
12 charge, creates an incentive for the utility to increase that kind of spending.
13 Increasing fixed non-bypassable charges or imposing a minimum bill has an impact
14 on the cost-effectiveness of energy efficiency, distributed generation, and other
15 distributed energy resource (“DER”) investments by customers because higher non-
16 bypassable charges means lower volumetric rates, or in the case of a minimum bill, a
17 floor on bill savings. This results in longer payback periods on customers’
18 investments designed to reduce usage of energy. In sum, the decision about whether
19 to recover costs through fixed charges and/or a minimum bill is a decision about
20 what price signals the rate sends—both to customers and to the utility; it is a
21 fundamental question of rate design.

22
23 **Q. Why do you say that high fixed charges and the minimum bill for residential**
24 **electric are economically regressive?**

25 A. It is a matter of simple math that high fixed charges and the minimum bill have

1 greater impacts on low users of electricity and gas services because more of their
2 monthly bill is fixed and non-bypassable. These impacts become economically
3 regressive when there is a high correlation between low usage rates and lower
4 household incomes. My testimony has demonstrated that this correlation exists in
5 Florida and among DEF's customers.

6
7 **Q. Are there other disparate impacts from high fixed charges to underrepresented**
8 **customer groups?**

9 A. Yes. In my experience, low users of electricity have lower and flatter load curves—
10 less peaky demand—than high users. As a result, when peak-driven demand-related
11 fixed costs are allocated to the residential class and some of those costs are included
12 in a minimum bill or collected through a fixed customer charge set under a minimum
13 distribution system method, low-use, often low-wealth customers are required to pay
14 more than their fair share of these costs. As a result of DEF's reliance on the
15 minimum bill approach, low-wealth customers are being charged for costs driven by
16 the usage levels and patterns of more well-to-do, higher-demand customers. Simply
17 stated, low-use and often lower demand customers are being required, through the
18 minimum bill, to subsidize higher-use customers who are typically more well-to-do.

19
20 **Q. As high fixed cost businesses, should utilities impose high fixed charges or a**
21 **minimum in order to align rate structure with cost structure?**

22 A. No. As I previously addressed, DEF's justification for a minimum bill asserts that it
23 should charge high fixed customer charges because it has high fixed costs and
24 because low users pay lower bills than average customers and thus contribute less to
25 total fixed cost recovery. In my more-than thirty years in utility regulation I have yet

1 to find a single authoritative economic text to support the argument that economic
2 efficiency results from mimicking cost structure in rate design. Moreover, DEF
3 assumes that customers at all usage levels cause the same average amount of fixed
4 costs—a proposition it does not support with cost-of-service data.²⁶ On the contrary,
5 the flatter usage patterns of low user customers and the generation coincidence of
6 self-generation customers that I have seen supports at least a working assumption
7 that low users create lower levels of fixed costs than high users. Distribution
8 infrastructure and component costs, which are typically sized to demand, are
9 typically lower for lower use customers.

10
11 **Q. Are there competitive businesses with high fixed costs that impose high fixed**
12 **charges?**

13 A. There are very few. The vast majority of high fixed-cost businesses do not impose
14 fixed charges at all and would likely not survive long in a competitive market if they
15 did. For example, neither airlines nor transit services require monthly subscriptions,
16 nor do hotels or shopping malls. There are some businesses like warehouse retailers
17 and on-line shopping services with optional levels of fixed charges, but those
18 charges appear designed to increase sales to loyal customers—which, in the electric
19 utility regulatory setting, would be called “load building.” The fact that many
20 businesses must make large fixed-cost investments does not translate into fixed
21 charges in almost all business cases; rather, the forces of competition reward
22 businesses for careful investment analysis, inventory management, and cost
23 control—all disciplines that if mastered would greatly improve the performance of
24 electric and gas utilities far more than a guarantee of fixed costs recovery through
25 non-bypassable customer charges.

1 **Q. Isn't economic efficiency improved when prices reflect marginal costs?**

2 A. Yes, prices advance efficiency when they reflect marginal costs, but that is an
3 entirely different issue than reflexively asserting that fixed charges should be used to
4 collect marginal fixed costs as a matter of rate design. In fact, by weakening the
5 price signal that customers see from marginal changes in consumption at very low
6 levels of use, the minimum bill approach regressively deviates from marginal cost
7 pricing.

8
9 **Q. How has DEF analyzed price signal impacts from its minimum bill for electric**
10 **customers?**

11 A. DEF provided "typical bill" calculations of the bill impacts of its rate proposals via
12 MFR filings and reports that more than 90,000 of its residential customers pay more
13 than they should by operation of the minimum bill,²⁷ but it has not otherwise studied
14 the impacts of its proposed rates on residential customers, or upon low-wealth
15 customers in particular.

16
17 **Q. What costs should be charged on a per-customer basis?**

18 A. First, I note that there is no rule of economics that requires any per-customer fixed
19 charge. There are many competitive businesses that recover costs only through
20 usage-based charges. Where a customer charge is used, a good rule of thumb is this:
21 If the cost disappears because the customer leaves the system, the cost is a customer
22 cost. This is generally referred to as the "basic customer method." The consumption
23 function of the meter, the service drop, and a reasonable share of customer service
24 spending would all meet this test, and therefore these costs are included in
25 approaches like the basic customer method. Likewise, if the cost remains after a

1 customer leaves the system, the cost is not a customer cost. Transformers, secondary
2 and primary distribution lines, program-specific marketing and customer care
3 expenses, uncollectible bills, general operations, administrative and maintenance
4 expenses, and taxes are all non-customer costs, and the principle of cost-causation
5 dictates that those costs should not be recovered through a fixed or customer charge
6 or a minimum bill.

7

8 **Q. Are there any well-accepted references that comport with your view that the**
9 **basic customer method is most appropriate for use in classifying customer**
10 **costs?**

11 A. Yes. In 1961, James C. Bonbright defined customer costs as follows:

12 [The customer costs] are those operating and capital costs found to vary with
13 number of customers regardless, or almost regardless, of power consumption.
14 Included as a minimum are the costs of metering and billing along with
15 whatever other expenses the company must incur in taking on another
16 consumer.²⁸

17 Simply stated, Bonbright's definition—which describes the basic customer
18 method—ensures that the customer charge should be limited to the marginal cost of
19 connecting the customer to the grid and should include only costs that vary directly
20 with the number of customers.²⁹ A minimum bill approach violates this long-
21 standing principle.

22

23 **Q. Are there any benefits to relying on Bonbright's definition of customer costs in**
24 **building the customer charge?**

25 A. Adhering to the principle that customer costs are costs that vary with customer

1 count, and almost or entirely without regard for usage, advances other ratemaking
2 principles such as equity and cost-causation and preserves the power of volumetric
3 charges as a price signal. Residential customers who do not have to pay a minimum
4 bill can see a direct correlation, both positive and negative, between their level of
5 usage and their contributions to cost creation when energy- and demand-related costs
6 are recovered through volumetric charges. Allocating demand-related costs or even
7 unallocable costs (as Bonbright viewed the minimum system costs) to the fixed
8 customer charge eliminates, or at least severely weakens, the price signal impact.

9

10 **Q. How much cost does connecting a new customer cause?**

11 A. Costs directly related to grid connection for new customers include a portion of the
12 cost of a meter, billing and metering services, and collection costs—in Bonbright’s
13 words, the costs the utility “must incur in taking on another customer.”³⁰ According
14 to DEF’s data, this amount is less than \$14.00 per month.³¹

15

16 **Q. What should DEF do to determine customer-related costs and ultimately build a
17 just and reasonable customer charge?**

18 A. The Company should use the basic customer method. The Regulatory Assistance
19 Project Cost Allocation Manual provides additional explanatory detail that the
20 Company should consult.³²

21

22 **Q. Does DEF’s minimum bill raise any other economic efficiency concerns?**

23 A. Yes. The minimum bill approach sends the wrong economic price signal to DEF.
24 When marginal distribution infrastructure costs are allocated to high fixed charges or
25 a minimum bill, demand elasticity means that sales will go up as customers face

1 lower marginal rates for increased use. In this way, a Commission decision to limit
2 the costs that can be loaded into fixed charges or to disallow a minimum bill serves
3 as the classic substitute for the forces of free market competition. Conversely, the
4 utility that is allowed to increase spending and allocate those costs to non-bypassable
5 charges like the minimum bill will have less incentive to operate and spend in a
6 least-cost manner. Revenues that a regulated monopoly can extract from customers
7 without fear or with reduced fear of consumption changes are called monopoly
8 rents—neither markets nor regulatory commissions should encourage them by
9 allowing high fixed charges or minimum bill rate designs.

10

11 **Q. What do you conclude about DEF’s minimum bill for residential customers?**

12 A. DEF’s minimum bill, as and like a high fixed customer charge, unjustly and
13 unreasonably charges customers for costs that are not customer costs, and it is a bad
14 rate making policy.

15

16 **Q. What residential fixed customer charge should the Commission approve?**

17 A. The Commission should approve a fixed customer charge for residential customers
18 that eliminates the minimum bill and is not based on treatment of demand-related
19 costs as customer costs. Again, that charge should not be higher than \$14.00 per
20 customer per month, and with other reductions in allowed revenue that I propose,
21 should be substantially lower.

22

23 **Q. How do you propose that DEF recover demand-related costs that should not be
24 recovered through the minimum bill or through high fixed customer charges?**

25 A. I propose that the adjustments be addressed in a revenue neutral manner. That is, any

1 just and reasonable costs that are not collected through the customer charge should
2 be assigned as demand-related and recovered through the residential volumetric
3 charge.

4
5 **Q. What effect does the classification of demand-related distribution costs have on**
6 **volumetric rates?**

7 A. My proposal has three primary impacts. First, it removes a significant amount of the
8 regressive nature of DEF's minimum bill and better aligns overall rates with cost
9 causation. This change empowers low-use and low-income customers to better
10 manage their electric bills through changes in usage and behavior. Second, it
11 increases the volumetric rates, sending a more efficient price signal to high users and
12 reflects the fact that high users drive distribution system costs. This in turn improves
13 the economics of efficient use and efficiency programs, self-generation, and reliance
14 on zero- or low-marginal cost resources like solar energy. Third, the changes will
15 send better price signals to DEF relating to its level of distribution spending.

16
17 **V. DEF'S ROE PROPOSAL IS EXCESSIVE AND UNJUSTIFIED AND**
18 **SHOULD BE REDUCED**

19 **Q. What allowed ROE and equity fraction does DEF propose?**

20 A. DEF proposes a midpoint allowed ROE of 11.15%, with potential for earning up to
21 12.15% in this rate proceeding.³³ DEF also proposes a 53% equity ratio from
22 investor sources.³⁴

23
24 **Q. How does DEF justify its ROE request?**

25 A. After reviewing the testimony submitted by DEF, primarily that of Company witness

1 Adrien McKenzie,³⁵ DEF's primary witness on the topic, DEF's argument boils
2 down to the that fact it wants to spend a lot of money and that it wants to make a lot
3 of money in doing so. DEF presents no evidence of financial impairment or
4 difficulties in obtaining capital at reasonable rates. As discussed in this testimony, a
5 significant amount of DEF's proposed spending is excessive and unjustified.

6 Although DEF witness McKenzie modifies and applies several analysis models to
7 argue that the proposed ROE and capital structure are reasonable,³⁶ his arguments
8 can be boiled down to one, in three parts:³⁷ (1) DEF operates in a storm-prone region
9 due to the accelerating effects of climate change, which is risky, and repairing
10 systems damaged by severe storms is expensive; (2) DEF proposes to spend a huge
11 amount of money on infrastructure and other projects; and therefore (3) DEF needs
12 to provide capital investors with outsized profits in order to get the capital it needs to
13 fund its risky and aggressive expansion and spending plans.

14
15 **Q. Do you agree with these justifications?**

16 A. No, and for several reasons. As I have testified, DEF's primary business drivers of
17 customer and sales growth have been extremely modest in effect and do not justify
18 the dramatic increases in spending and earnings that DEF has had and proposes.
19 DEF is overspending and thus over-earning against these drivers—its spending and
20 profits should be reduced, not further inflated. Second, DEF's proposed new
21 spending is unreasonable and unjustified in many cases. If these proposals were
22 moderated to reasonable levels, DEF could maintain strong financials without
23 making outsized profits. DEF wants to increase rates by about \$820 million over
24 2025, 2026, and 2027 (cumulatively over \$2 billion) primarily based on new capital
25 projects, growing its rate base and profits. Third, DEF's ROE proposal is out of step

1 with awarded ROEs in recent years. According to the Edison Electric Institute
2 (“EEI”), awarded ROEs since the start of 2022 have averaged 9.52%, as have
3 awarded ROEs dating back for five years.³⁸ In fact, awarded ROEs over the past ten
4 years have been only slightly higher, at 9.67%.³⁹ Fourth, the Federal Reserve Bank is
5 continuing efforts to control inflation and resume interest rate reductions.⁴⁰ Fifth,
6 while DEF faces climate change risks associated with severe weather events, such
7 risks are now unfortunately common across the U.S. and around the world. DEF has
8 finally started taking some inconsistent steps towards reducing its dependence on
9 fossil fuels, and if it is serious about climate risk, it should continue those efforts.⁴¹
10 In addition, if DEF wants to protect investors, it should not do so with outsized
11 profits for a risky system, but through concerted planning and efforts to change the
12 basic structure of its system. These efforts include more aggressive support, tested by
13 cost-effectiveness analyses, for deployment of distributed energy resources such as
14 distributed storage, distributed generation, energy efficiency, strengthened building
15 codes and standards, and other similar measures.

16
17 **Q. Why, in particular, isn’t increasing DEF profits a solution for increased climate-**
18 **related severe weather events?**

19 A. Climate-related severe weather events don’t just impact DEF. They create massive
20 problems throughout local and national economies and society as a whole. To
21 propose that DEF profits be increased on the backs of DEF’s customers, especially
22 residential customers, in order to compensate DEF for the risk of running an
23 overwhelmingly fossil-fueled electric utility ignores the very real suffering and
24 hardships imposed on those customers all year round. In this case, DEF proposes
25 increases in climate-damaging fossil fuel emissions and excess profits on those

1 increases. Regulation that acts as a substitute for competition should not and would
2 not award excess profits for excessively risky investments and behavior.

3
4 **Q. Would significant reductions in DEF's proposed spending reduce the need for**
5 **excess profits?**

6 A. Conveniently, while DEF asserts that excessive spending plans justify a higher ROE,
7 DEF also asserts that reducing that spending will not reduce the need for outsized
8 profits.⁴² I don't agree, but from a performance perspective, I could support the
9 Commission's consideration of a well-developed proposal that would allow DEF to
10 earn at the profit levels it proposes in return for achieving a significantly reduced
11 level of capital and operating spending. Until DEF puts that proposal on the table, its
12 allowed ROE should be reduced dramatically.

13
14 **Q. What allowed ROE do you recommend that the Commission approve for DEF?**

15 A. Unless and until DEF shows that it is not seeking to grow Duke profits on the backs
16 of Florida residents, and it offers a comprehensive plan for mitigating and not
17 exacerbating its contributions and exposure to climate-related severe weather, DEF's
18 allowed ROE should not exceed the average awarded to other utilities. For these
19 reasons, I recommend that the Commission award DEF a midpoint ROE of no higher
20 than 9.50%.

21
22 **Q. What impact would an allowed ROE of 9.50% have on DEF's revenue**
23 **requirements and rates?**

24 A. Based on the information provided by DEF in this case, I estimate that an allowed
25 ROE of 9.50% would reduce the overall cost of service by about 4.6%. According to

1 DEF,⁴³ a reduction in the allowed ROE from 11.15% to 9.50% will reduce DEF's
2 total residential retail cost of service by about \$100 million, and the residential retail
3 cost of service by about \$132 million—providing a significant improvement in
4 electric service affordability. As I explain in the next section of this testimony, I also
5 recommend that the Commission direct DEF to employ a 12 CP 50% AD method for
6 cost allocation, which would further reduce the cost of service for residential
7 customers and more fairly allocate costs.

8
9 **VI. DEF'S PROPOSED 12 CP 25% AD COST ALLOCATION METHOD OVER-**
10 **ALLOCATES COSTS TO RESIDENTIAL CUSTOMERS AND THE**
11 **COMMISSION SHOULD DIRECT DEF TO USE A 12 CP 50% AD METHOD**
12 **IN ITS PLACE**

13 **Q. What impact does DEF implementation of a 12 CP 25% AD allocation method**
14 **for production and demand-related retail costs have on residential customer**
15 **rates and affordability?**

16 A. DEF expresses a preference for the 12 CP 25% AD method over the 12 CP 1/13 AD
17 method it also analyzed because the 25% AD method assigns greater weight to
18 energy use than the 1/13th method.⁴⁴ While this approach reduces the cost
19 assignment to residential customers somewhat, it does not go far enough. I therefore
20 recommend that DEF use a 12 CP 50% AD method.

21
22 **Q. What factors are considered when deciding which allocation method to use?**

23 A. Although arguments and justifications about which cost allocation method to use are
24 often couched in broad assertions about which method better reflects cost causation,
25 the decision of how to slice the pie of total revenue requirements often devolves to a

1 contest of regulatory political power played out in confidential settlement
2 negotiations. Very large customers with the ability to fully participate in rate
3 proceedings represented by expensive consultants often do better than residential
4 consumer advocates with limited budgets. It is also true that because the number of
5 residential customers and small business customers vastly exceeds the numbers of
6 customers in other classes, assignment of revenue requirement increases to small
7 customers can result in smaller per-unit or per-bill increases relative to other
8 customer classes. Additionally, under a somewhat perverse and certainly unjust
9 theory of inverse elasticity, monopoly utilities often find convincing the argument
10 that excess costs should be assigned to customers with the least opportunity to do
11 anything but pay the charges.⁴⁵

12

13 **Q. Why do you recommend the 12 CP 50% AD approach?**

14 A. In my opinion, the best measure for which cost allocation method to use is which
15 best serves and promotes the public interest. Solar generation provides relatively
16 high contributions to capacity value at relatively small levels of system penetration,
17 but is primarily valuable as a zero-marginal cost generator of energy. Given that
18 solar production costs are driving so much of capital expenditures, and that
19 increasing deployment of solar means a reduced contribution to system peaks in both
20 summer and winter, a heavier weighting on the energy aspect—using a 50% rather
21 than 25% factor—is more appropriate to capture residential cost contributions to
22 system costs.⁴⁶ I recommend using a 12 CP & 50% AD methodology without MDS,
23 and without a minimum bill, as reflected in Exhibit KRR-3 (reflecting my
24 recommended 9.5% ROE with no other additional changes, although other costs
25 should be disallowed as discussed below), and that the Commission direct DEF to

1 adjust rates accordingly.

2

3 **Q. What is the combined effect of your recommendations that the Commission**
4 **only allow DEF an ROE of 9.5% and that it use a 12 CP 50% AD cost allocation**
5 **method?**

6 A. The cumulative effect of these two recommendations would be the reduction of the
7 residential retail cost of service by about 5.7% or \$122 million in residential cost of
8 service, again, with accompanying improvements in affordability.

9

10 **VII. DEF'S PROPOSED EXPANSION OF THE CLEAN ENERGY CONNECTION**
11 **PROGRAM INCREASES CROSS-SUBSIDIZATION OF BUSINESS**
12 **CUSTOMERS BY RESIDENTIAL CUSTOMERS**

13 **Q. What does DEF propose regarding its Clean Energy Connection program?**

14 A. DEF proposes to add five new solar generation plants to its Clean Energy
15 Connection ("CEC") program in the years 2025-2027.⁴⁷ The program expansion will
16 add about \$1.7 billion to DEF's revenue requirements.⁴⁸

17

18 **Q. How does DEF structure the CEC program in terms of costs and benefits?**

19 A. DEF's program is a subsidy program designed overwhelmingly for the benefit of
20 large customers that entitles those customers to solar production credits that cost less
21 than those customers are required to pay in program subscription costs.⁴⁹ Shortfalls
22 in the costs are paid for by non-subscriber customers, who are primarily residential
23 customers. DEF asserts that if its projections of fuel and emissions costs savings are
24 realized as expected, the program pays for itself, but only when such savings over
25 the next thirty years are counted.

1 **Q. Is the CEC program reasonable and equitable?**

2 A. No. If residential customers are going to be required to pay for new solar generation,
3 they should receive 100% of the benefits. If business customers want to subscribe to
4 a solar program, they should pay 100% of the program costs. And any risks of
5 unrealized savings should be allocated to the program subscribers. The Commission
6 should not allow DEF to force additional inter-class subsidies through the CEC
7 program.

8
9 **Q. How do you recommend that the Commission respond to DEF's proposal to**
10 **expand its CEC program spending?**

11 A. A fairly designed community solar program can offer solar subscription benefits to
12 customers without cross-subsidies to businesses that do not need them and without
13 requiring non-subscribers to bear programmatic risks associated with the realization
14 or non-realization of projected savings. The Commission should require DEF to
15 suspend any plans for CEC program expansion unless and until DEF redesigns the
16 program to eliminate cross-subsidies and the assignment of program cost risks to
17 non-subscribers.

18

19 **VIII. DEF PAYMENT FOR CURTAILABLE LOADS ARE UNJUST AND**
20 **UNREASONABLE IN LIGHT OF OVERBUILDING**

21 **Q. Does DEF make payments or provide bill credits to large customers for**
22 **participation in interruptible load programs?**

23 A. Yes. As filed in response to discovery in the DSM goal-setting docket, over the years
24 2025-2027, DEF proposes to make incentive payments to customers on curtailable
25 and interruptible rates of about \$54 million each year for a total of \$162 million

1 (attached as Exhibit KRR-4). This amount reflects about an 11% increase in
2 incentive payments over the amount paid in 2023 (see attached Exhibit KRR-5).

3
4 **Q. What is the rationale for such payments or credits?**

5 A. Curtailable rate credits or payments are generally designed to afford a utility the
6 opportunity to realize load reductions as a cost-effective alternative to operating
7 more expensive peak generating plants.

8
9 **Q. How does DEF approach the procurement of cost-effective on-peak generation
10 and curtailable load?**

11 A. DEF's approach is to make curtailable rate payments or credits to large customers for
12 service that is never curtailed and to socialize the costs to all customers that bear any
13 of the costs of peak demand.⁵⁰ In addition, DEF has a strategy of dramatically
14 overbuilding generation capacity and maintaining excessive peak reserve margins as
15 a more expensive alternative to reliance of actual curtailment of large customer
16 loads.⁵¹

17
18 **Q. Are DEF's curtailable load payments or credits and resulting rates fair, just,
19 and reasonable?**

20 A. No. DEF's curtailable load payments or credits constitute costs that are neither
21 useful nor used in providing cost-effective electric service to its customers. To the
22 extent that the costs of the curtailable rate payments or credits are recovered from
23 any customers other than those receiving the payments, they are nothing more than
24 an unjust cross-subsidy.

25

1 **Q. What Commission action do you recommend regarding DEF’s curtailable rate**
2 **payments or credits?**

3 A. It is important for the Commission to recognize that curtailable rate programs—also
4 known as demand response programs—can be a cost-effective alternative to building
5 expensive on-peak generation resources. Regulatory authorities like the Commission
6 are traditionally charged with serving as a substitute for the forces of market
7 competition that a monopoly utility would, but for its monopoly franchise, otherwise
8 face. As such, the Commission should require DEF to demonstrate that it is
9 proposing to charge customers for the most cost-effective of the options it has
10 available in meeting the demand for reliable electric service. I therefore recommend
11 that the Commission direct DEF to suspend any curtailable rate payments to any
12 customers until DEF has affirmatively demonstrated the cost-effectiveness of the rate
13 under a BCA *and* that DEF be prohibited from recovering the cost of new generation
14 or energy storage technologies designed to meet on-peak demand unless such
15 options are also demonstrated to be the most cost-effective.

16

17 **IX. DEF CUSTOMER FUNDING OF NEW BOILERS AND ONGOING \$1**
18 **MILLION PER YEAR SUBSIDY TO THE UNIVERSITY OF FLORIDA IN**
19 **ORDER TO MAINTAIN LOAD**

20 **Q. Please describe DEF’s current contractual relationship with the University of**
21 **Florida (“UF”).**

22 A. DEF has long operated the boilers at UF which in turn power a cogeneration facility
23 and provide electricity and steam to the campus. In 2023, DEF and UF agreed that
24 DEF would replace the existing boilers which were UF-owned, with new boilers
25 and, in addition, DEF would continue providing UF with a \$1 million/year subsidy

1 on the cost of steam.⁵² The new boilers and the subsidy will cost some \$30 million
2 which DEF proposes to recover from customers, and which DEF deems appropriate
3 because it enables DEF to maintain 50 MW in load.⁵³

4

5 **Q. Has DEF conducted any analysis to validate its assertion that the costs of the**
6 **new boilers and the \$1 million steam subsidy are cost-effective for DEF's**
7 **customers?**

8 A. No.⁵⁴ DEF's assertions are therefore unreasonable. As it stands, the public education
9 institution should operate with taxpayer funding and not DEF utility customer
10 funding.

11

12 **Q. How do you recommend that the Commission treat the proposed subsidies to**
13 **UF by DEF customers?**

14 A. The Commission should disapprove of any customer-funded spending on the UF
15 boilers and the steam subsidy unless and until it demonstrates the cost-effectiveness
16 of the spending to DEF's customers in an objective, comprehensive, and transparent
17 BCA.

18

19 **X. DEF PROPOSES ADDITIONAL UNJUSTIFIED AND UNREASONABLE**
20 **SPENDING THAT THE COMMISSION SHOULD DENY IN THIS**
21 **PROCEEDING**

22 **Q. What other DEF spending proposals merit the Commission's review and**
23 **disapproval?**

24 A. DEF proposes new spending of about \$3.325 billion over the period 2025-2027, with
25 all but \$280 million of this on transmission and distribution projects.⁵⁵ With the

1 single exception of its assertions regarding the Powerline battery energy storage
2 project, DEF has not performed transparent, comprehensive BCAs or fairly
3 evaluated alternatives to any of this spending.⁵⁶ The Commission should act to reign
4 in DEF's proposed spending spree in order to help ensure customers can afford
5 essential electric service. I point out several issues where Commission action is
6 appropriate, though my silence on any particular issue should not be considered
7 support for any DEF proposal. The issues that I propose to call the Commission's
8 attention include the following:

- 9 • The Commission should deny any rate recovery of employee incentive
10 compensation costs until DEF submits a revised employee incentive
11 compensation plan.⁵⁷ The Commission should require DEF to submit a plan that
12 includes shareholder direct "below the line" funding of at least 50% of the
13 program budget and that reflects two major changes: (1) An essential performance
14 metric that addresses maintaining and improving customer affordability,
15 especially among residential customer with income levels at or below 400% of the
16 Federal poverty level. In particular, this metric should be addressed with
17 permanent or long-lived actions that do not merely require other customers to pay
18 low-income customer bills. (2) The revision of any earnings-based performance
19 metrics to ensure that only earnings improvements that reflect measurable
20 customer benefits qualify for inclusion in any incentive compensation program.
- 21 • The Commission should disapprove any capital spending project of \$1,000,000 or
22 more that is not supported by a comprehensive, objective, transparent, and
23 documented BCA. Without BCAs to analyze alternatives and inform
24 consideration of proposals submitted for approval, the Commission has no way of
25 knowing whether DEF spending proposals will result in rates that are fair, just,

1 and reasonable.

- 2 • The Commission should disapprove any further expansion of the Clean Energy
3 Connection program unless and until DEF redesigns the program to eliminate
4 interclass cross-subsidies and a cost structure that requires non-subscribers to bear
5 the program cost risks associated with forecasted costs and savings.
- 6 • The Commission should disapprove any spending by DEF under the Vision
7 Florida unless and until DEF demonstrates the merits of such investments through
8 objective, comprehensive, and transparent BCAs that evaluate proposed
9 investments against all reasonable alternatives.
- 10 • The Commission should disapprove most, if not all, of the rate recovery for the
11 transmission and distribution growth, expansion, and major project proposed
12 spending as unjustified and excessive in the absence of objective, comprehensive,
13 and transparent BCAs that evaluate proposed investments against all reasonable
14 alternatives.

15

16 **XI. CONCLUSIONS AND RECOMMENDATIONS**

17 **Q. What do you conclude from your review of DEF's application in this** 18 **proceeding?**

- 19 A. DEF's proposed spending is excessive and a threat to electric service affordability,
20 especially for low- and moderate-income Floridians. DEF's specific proposals are
21 almost entirely unsupported by benefit-cost analysis or consideration of alternatives,
22 and are unjustified against load and customer growth in its service territory. Now is
23 the time for the Commission to require DEF to behave in a more responsible
24 manner—as the utility would if it faced competition.

25

1 **Q. What are your recommendations to the Commission?**

2 A. In this testimony, I present a number of recommendations designed to reduce the
3 outsized electric bills and energy burdens faced by DEF's residential customers.

4 These recommendations include:

5 (1) Ending use of the residential minimum bill and replacing it with a customer
6 charge based on basic customer cost;

7 (2) Reducing DEF's ROE to 9.50%;

8 (3) Disallowing use of the proposed method for cost allocation and substitute a 12
9 CP and 50% AD cost allocation, without using the principal of "gradualism"
10 to shift additional costs onto residential customers;

11 (4) Eliminating growth, expansion, and major project spending for transmission
12 and distribution unless and until a BCA is completed;

13 (5) Eliminating spending for Vision Florida projects unless and until a BCA is
14 completed;

15 (6) Requiring DEF to produce BCAs to support all requests for capital spending
16 projects for \$1 million or more.

17

18 **Q. Does this conclude your testimony?**

19 A. Yes, it does.

Under Ramsey pricing, the price markup over marginal cost is inverse to the price elasticity of demand and the price elasticity of supply: the more elastic the product's demand or supply, the smaller the markup.” Wikipedia, *Ramsey Problem*, https://en.wikipedia.org/wiki/Ramsey_problem (last visited June 5, 2024).

Karl R. Rábago

Rábago Energy LLC

1350 Gaylord Street, Denver, Colorado 80206-2114
c/SMS: +1.512.968.7543 | e: rabago@me.com | rabagoenergy.com

Nationally recognized leader and innovator in electricity and energy law, policy, and regulation. Experienced as a regulatory expert, utility executive, research and development manager, sustainability leader, senior government official, educator, and advocate. Law teaching experience at Pace University Elisabeth Haub School of Law, University of Houston Law Center, and U.S. Military Academy at West Point. Military veteran.

Employment

RÁBAGO ENERGY LLC

Principal: July 2012—Present. Consulting practice dedicated to providing business sustainability, expert witness, and regulatory advice and services to organizations in the clean and advanced energy sectors. Prepared and submitted testimony in more than 35 jurisdictions and 165 electricity and gas regulatory proceedings. Recognized national leader in development and implementation of innovative “Value of Solar” alternative to traditional net metering. Additional information at rabagoenergy.com.

- Director, Colorado Electric Transmission Authority (2022-present).
- Chairman of the Board, Center for Resource Solutions (1997-present). Past chair of the Green-e Governance Board.
- Director, Solar United Neighbors (2018-present).
- Advisor, Commission Shift (2021-present).
- Director, Texas Solar Energy Society (2022-present).

PACE ENERGY AND CLIMATE CENTER, PACE UNIVERSITY ELISABETH HAUB SCHOOL OF LAW

Senior Policy Advisor: September 2019—September 2020. Part-time advisor and staff member. Provided transitional expert witness, project management, and business development support on electric and gas regulatory and policy issues and activities.

Executive Director: May 2014—August 2019. Leader of a team of professional and technical experts and law students in energy and climate law, policy, and regulation. Secured funding for and managed execution of regulatory intervention, research, market development support, and advisory services. Taught Energy Law. Provided learning and development opportunities for law students. Additional activities:

- Director, Alliance for Clean Energy – New York (2018-2019).
- Director, Interstate Renewable Energy Council (IREC) (2012-2018).
- Co-Director and Principal Investigator, Northeast Solar Energy Market Coalition (2015-2017). The NESEMC was a US Department of Energy’s SunShot Initiative Solar Market Pathways project. Funded under a cooperative agreement between the US DOE and Pace University, the NESEMC worked to harmonize solar market policy and advance supportive policy and regulatory practices in the northeast United States.

Karl R. Rábago

AUSTIN ENERGY – THE CITY OF AUSTIN, TEXAS

Vice President, Distributed Energy Services: April 2009—June 2012. Executive in one of the largest public power electric utilities, serving more than one million people in central Texas. Responsible for management and oversight of energy efficiency, demand response, and conservation programs; low-income weatherization; distributed solar and other renewable energy technologies; green buildings program; key accounts relationships; electric vehicle infrastructure; and market research and product development. Executive sponsor of Austin Energy's participation in an innovative federally funded smart grid demonstration project led by the Pecan Street Project. Led teams that successfully secured over \$39 million in federal stimulus funds for energy efficiency, smart grid, and advanced electric transportation initiatives. Additional activities included:

- Director, Renewable Energy Markets Association. REMA is a trade association dedicated to maintaining and strengthening renewable energy markets in the United States.
- Member, Pedernales Electric Cooperative Member Advisory Board. Invited by the Board of Directors to sit on first-ever board to provide formal input and guidance on energy efficiency and renewable energy issues for the nation's largest electric cooperative.

THE AES CORPORATION

Director, Government & Regulatory Affairs: June 2006—December 2008. Director, Global Regulatory Affairs, provided regulatory support and group management to AES's international electric utility operations on five continents. Managing Director, Standards and Practices, for Greenhouse Gas Services, LLC, a GE Energy and AES venture committed to generating and marketing voluntary market greenhouse gas credits. Government and regulatory affairs manager for AES Wind Generation. Managed a portfolio of regulatory and legislative initiatives to support wind energy market development in Texas, across the United States, and in many international markets.

JICARILLA APACHE NATION UTILITY AUTHORITY

Director: 1998—2008. Located in New Mexico, the JANUA was an independent utility developing profitable and autonomous utility services that provided natural gas, water utility services, low-income housing, and energy planning for the Nation. Authored "First Steps" renewable energy and energy efficiency strategic plan with support from U.S. Department of Energy.

HOUSTON ADVANCED RESEARCH CENTER

Group Director, Energy and Buildings Solutions: December 2003—May 2006. Leader of energy and building science staff at a mission-driven not-for-profit contract research organization based in The Woodlands, Texas. Responsible for developing, maintaining, and expanding on technology development, application, and commercialization support programmatic activities, including the Center for Fuel Cell Research and Applications; the Gulf Coast Combined Heat and Power Application Center; and the High-Performance Green Buildings Practice. Secured funding for major new initiative in carbon nanotechnology applications in the energy sector.

- President, Texas Renewable Energy Industries Association. As elected president of the statewide business association, led and managed successful efforts to secure and implement significant expansion of the state's renewable portfolio standard as well as other policy, regulatory, and market development activities.
- Director, Southwest Biofuels Initiative. Established the Initiative as an umbrella structure for multiple biofuels related projects.

Karl R. Rábago

- Member, Committee to Study the Environmental Impacts of Wind Power, National Academies of Science National Research Council. The Committee was chartered by Congress and the Council on Environmental Quality to assess the impacts of wind power on the environment.
- Advisory Board Member, Environmental & Energy Law & Policy Journal, University of Houston Law Center.

CARGILL DOW LLC (NOW NATUREWORKS, LLC)

Sustainability Alliances Leader: April 2002—December 2003. Integrated sustainability principles into all aspects of a ground-breaking bio-based polymer manufacturing venture. Responsible for maintaining, enhancing, and building relationships with stakeholders in the worldwide sustainability community, as well as managing corporate and external sustainability initiatives.

- Successfully completed Minnesota Management Institute at University of Minnesota Carlson School of Management, an alternative to an executive MBA program that surveyed fundamentals and new developments in finance, accounting, operations management, strategic planning, and human resource management.

ROCKY MOUNTAIN INSTITUTE

Managing Director/Principal: October 1999—April 2002. Co-authored “Small Is Profitable,” a comprehensive analysis of the benefits of distributed energy resources. Provided consulting and advisory services to help business and government clients achieve sustainability through application and incorporation of Natural Capitalism principles.

- President of the Board, Texas Ratepayers Organization to Save Energy. Texas R.O.S.E. is a non-profit organization advocating low-income consumer issues and energy efficiency programs.
- Co-Founder and Chair of the Advisory Board, Renewable Energy Policy Project-Center for Renewable Energy and Sustainable Technology. REPP-CREST was a national non-profit research and internet services organization.

CH2M HILL

Vice President, Energy, Environment and Systems Group: July 1998—August 1999. Responsible for providing consulting services to a wide range of energy-related businesses and organizations, and for creating new business opportunities in the energy industry for an established engineering and consulting firm. Completed comprehensive electric utility restructuring studies for Colorado and Alaska.

PLANERGY

Vice President, New Energy Markets: January 1998—July 1998. Responsible for developing and managing new business opportunities for the energy services market. Provided consulting and advisory services to utility and energy service companies.

ENVIRONMENTAL DEFENSE FUND

Energy Program Manager: March 1996—January 1998. Managed renewable energy, energy efficiency, and electric utility restructuring programs. Led regulatory intervention activities in Texas and California. In Texas, played a key role in crafting Deliberative Polling processes. Participated in national environmental and energy advocacy networks, including the Energy Advocates Network, the National Wind Coordinating Committee, the NCSL Advisory Committee on Energy, and the PV-COMPACT Coordinating Council. Frequently appeared before the Texas Legislature, Austin City Council, and regulatory commissions on electric restructuring issues.

Karl R. Rábago

UNITED STATES DEPARTMENT OF ENERGY

Deputy Assistant Secretary, Utility Technologies: January 1995–March 1996. Manager of the Department's programs in renewable energy technologies and systems, electric energy systems, energy efficiency, and integrated resource planning. Supervised technology research, development and deployment activities in photovoltaics, wind energy, geothermal energy, solar thermal energy, biomass energy, high-temperature superconductivity, transmission and distribution, hydrogen, and electric and magnetic fields. Managed, coordinated, and developed international agreements. Supervised development and deployment support activities at national laboratories. Developed, advocated, and managed a Congressional budget appropriation of approximately \$300 million.

STATE OF TEXAS

Commissioner, Public Utility Commission of Texas. May 1992–December 1994. Appointed by Governor Ann W. Richards. Regulated electric and telephone utilities in Texas. Co-chair and organizer of the Texas Sustainable Energy Development Council. Vice-Chair of the National Association of Regulatory Utility Commissioners (NARUC) Committee on Energy Conservation. Member and co-creator of the Photovoltaic Collaborative Market Project to Accelerate Commercial Technology (PV-COMPACT).

LAW TEACHING

Professor for a Designated Service: Pace University Elisabeth Haub School of Law, 2014-2019. Non-tenured member of faculty. Taught Energy Law. Supervised a student intern practice.

Associate Professor of Law: University of Houston Law Center, 1990–1992. Full time, tenure track member of faculty. Courses taught: Criminal Law, Environmental Law, Criminal Procedure, Environmental Crimes Seminar, Wildlife Protection Law.

Assistant Professor: United States Military Academy, West Point, New York, 1988–1990. Member of the faculty in the Department of Law. Honorably discharged in August 1990, as Major in the Regular Army. Courses taught: Constitutional Law, Military Law, and Environmental Law Seminar.

LITIGATION

Trial Defense Attorney and Prosecutor, U.S. Army Judge Advocate General's Corps, Fort Polk, Louisiana, January 1985–July 1987. Assigned to Trial Defense Service and Office of the Staff Judge Advocate.

NON-LEGAL MILITARY SERVICE

Armored Cavalry Officer, 2d Squadron 9th Armored Cavalry, Fort Stewart, Georgia, May 1978–August 1981. Served as Logistics Staff Officer (S-4). Managed budget, supplies, fuel, ammunition, and other support for an Armored Cavalry Squadron. Served as Support Platoon Leader for the Squadron (logistical support), and as line Platoon Leader in an Armored Cavalry Troop. Graduate of Airborne and Ranger Schools. Special training in Air Mobilization Planning and Nuclear, Biological and Chemical Warfare.

Karl R. Rábago

Formal Education

LL.M., Environmental Law, Pace University School of Law, 1990: Curriculum designed to provide breadth and depth in study of theoretical and practical aspects of environmental law. Courses included: International and Comparative Environmental Law, Conservation Law, Land Use Law, Seminar in Electric Utility Regulation, Scientific and Technical Issues Affecting Environmental Law, Environmental Regulation of Real Estate, Hazardous Wastes Law. Individual research with Hudson Riverkeeper Fund, Garrison, New York, on federal regulation of cooling water intake structures for electric power plants.

LL.M., Military Law, U.S. Army Judge Advocate General's School, 1988: Curriculum designed to prepare Judge Advocates for senior level staff service. Courses included: Administrative Law, Defensive Federal Litigation, Government Information Practices, Advanced Federal Litigation, Federal Tort Claims Act Seminar, Legal Writing and Communications, Comparative International Law.

J.D. with Honors, University of Texas School of Law, 1984: Attended law school under the U.S. Army Funded Legal Education Program, a fully funded scholarship awarded to 25 or fewer officers each year. Served as Editor-in-Chief (1983–84); Articles Editor (1982–83); Member (1982) of the Review of Litigation. Moot Court, Mock Trial, Board of Advocates. Summer internship at Staff Judge Advocate's offices. Prosecuted first cases prior to entering law school.

B.B.A., Business Management, Texas A&M University, 1977: ROTC Scholarship (3–yr). Member: Corps of Cadets, Parson's Mounted Cavalry, Wings & Sabers Scholarship Society, Rudder's Rangers, Town Hall Society, Freshman Honor Society, Alpha Phi Omega service fraternity.

Karl R. Rábago

Re: *Energy Conservation Cost Recovery Clause*; Docket No. 20240002-EG

Dear Mr. Teitzman:

On behalf of Duke Energy Florida, LLC ("DEF"), please find enclosed for electronic filing in the above-referenced docket:

- DEF's Petition for Approval of True-Up Amount for the Period January 2023 through December 2023; and
- Direct Testimony of Karla Rodriguez with attached Exhibit No. KR-1T.

Thank you for your assistance in this matter and if you have any questions, please feel free to contact me at (850) 521-1425.

Sincerely,

/s/ Stephanie A. Cuello

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Energy Conservation Cost
Recovery Clause

Docket No. 20240002-EG

Filed: May 1, 2024

**DUKE ENERGY FLORIDA, LLC'S
PETITION FOR APPROVAL OF TRUE-UP AMOUNT**

Pursuant to Order No. PSC-2024-0028-PCO-EG, issued February 6, 2024, in the above-referenced docket, Duke Energy Florida, LLC (“DEF” or “the Company”) petitions the Florida Public Service Commission (“Commission”) for approval of an over-recovery of \$3,699,623 as DEF’s adjusted net true-up amount for the period January 2023 through December 2023. In support of this petition, DEF states:

1. The name and address of the affected agency are:

Florida Public Service Commission
2540 Shumard Oak Boulevard
Tallahassee, Florida 32399-0850

2. The Petitioner’s name and address are:

Duke Energy Florida, LLC
299 First Avenue North
St. Petersburg, Florida 33701

Notices, orders, pleadings and correspondence to be served upon DEF in this proceeding should be directed to:

Dianne M. Triplett
Deputy General Counsel
Duke Energy Florida
299 1st Avenue North
St. Petersburg, FL 33701
(727) 820-4692 telephone
Dianne.Triplett@duke-energy.com

Matthew R. Bernier
Associate General Counsel
Duke Energy Florida
106 E. College Avenue, Suite 800
Tallahassee, FL 32301
(850) 521-1428 telephone
Matt.Bernier@duke-energy.com

Stephanie A. Cuello
Duke Energy Florida, LLC
106 E. College Avenue, Suite 800
Tallahassee, FL 32301
(850) 521-1425 telephone
Stephanie.Cuello@duke-energy.com
FLRegulatoryLegal@duke-energy.com

3. DEF is a public utility subject to the Commission's jurisdiction pursuant to Chapter 366, Florida Statutes (F.S.). Pursuant to Section 366.82, F.S., and Rule 25-17.015, Florida Administrative Code (F.A.C.), DEF recovers its reasonable and prudent unreimbursed costs for conservation audits, conservation programs and implementation of DEF's conservation plan through the Energy Conservation Cost Recovery ("ECCR") clause. DEF has substantial interests in the proper calculation and recovery of its ECCR factor and the final true-up which is used in the computation of the ECCR factor.

4. DEF seeks Commission approval of an over-recovery of \$3,699,623 as the adjusted net true-up amount for the period January 2023 through December 2023. DEF's final adjusted net true-up amount for the period January 2023 through December 2023 was calculated consistent with the methodology set forth in Schedule I attached to Commission Order No. 10093, dated June 19, 1981. This calculation and supporting documentation are contained in Exhibit KR-1T, an exhibit attached to the prefiled testimony of DEF's witness Karla Rodriguez, which is being filed in conjunction with this petition.

5. As reflected on Schedule CT-1 of Exhibit KR-1T to Ms. Rodriguez' testimony, the adjusted net true-up for the period January 2023 through December 2023 is an over-recovery of \$3,699,623, which is the difference of the actual true-up over-recovery of \$9,254,377 and the estimated/actual true-up over-recovery of \$5,554,754.

WHEREFORE, DEF respectfully requests that the Commission approve an over-recovery of \$3,699,623 as the final adjusted net true-up amount for the period January 2023 through December 2023.

Respectfully submitted this 1st day of May, 2024.

Respectfully submitted,

/s/ Stephanie A. Cuello

DUKE ENERGY FLORIDA, LLC
DOCKET NO. 20240002-EG

**Energy Conservation and Cost Recovery Final True-up
for the Period January through December 2023**

DIRECT TESTIMONY OF
Karla Rodriguez
May 1, 2024

Q. Please state your name and business address.

A. My name is Karla Rodriguez. My business address is 299 1st Ave N, St. Petersburg, FL 33701.

Q. By whom are you employed and in what capacity?

A. I am employed by Duke Energy Business Services, LLC, as Lead Strategy & Collaboration Manager in the Portfolio Regulatory Strategy and Support department. Duke Energy Business Services and Duke Energy Florida, LLC (“DEF” or “the Company”) are both wholly owned subsidiaries of Duke Energy Corporation.

Q. What are your duties and responsibilities in that position?

A. My responsibilities include regulatory planning, support and compliance of the Company’s energy efficiency and demand-side management (“DSM”) programs. This includes support for development, implementation and training, budgeting, and accounting functions related to these programs.

1 **Q. What is the purpose of your testimony?**

2 A. The purpose of my testimony is to compare DEF's 2023 actual energy conservation
3 program costs with actual revenues collected through the Company's Energy
4 Conservation Cost Recovery ("ECCR") Clause during the period January 2023
5 through December 2023. The Company relies upon the information presented in my
6 testimony and exhibit in the conduct of its affairs.

7
8 **Q. For what programs does Duke Energy Florida seek recovery?**

9 A. DEF seeks recovery through the ECCR Clause for conservation programs approved
10 by the Commission as part of the Company's DSM Plan, as well as for Conservation
11 Program Administration (i.e., those common administration expenses not specifically
12 assigned to an individual program). Notably, DEF seeks recovery of costs for
13 conservation programs approved by the Commission on August 3, 2020 (see Order No.
14 PSC-2020-0274-PAA-EG), as follows:

- 15 • Home Energy Check
- 16 • Residential Incentive
- 17 • Neighborhood Energy Saver
- 18 • Low-Income Weatherization Assistance Program
- 19 • Load Management (Residential and Commercial)
- 20 • Business Energy Check
- 21 • Better Business a/k/a Smart Saver Business
- 22 • Smart Saver Custom Incentive
- 23 • Standby Generation

- 1 • Interruptible Service
- 2 • Curtailable Service
- 3 • Technology Development
- 4 • Qualifying Facility

5

6 **Q. Do you have any exhibits to your testimony?**

7 A. Yes, Exhibit KR-1T entitled, “Duke Energy Florida, LLC Energy Conservation
8 Adjusted Net True-Up for the Period January 2023 through December 2023.” There
9 are six (6) schedules included in this exhibit.

10

11 **Q. Will you please explain your exhibit?**

12 A. Yes. Exhibit KR-1T presents Schedules CT-1 through CT-6. Schedules CT-1 to CT-4
13 set out actual costs incurred for all programs during the period from January 2023
14 through December 2023. These schedules also illustrate variances between actual costs
15 and previously projected values for the same time period. Schedule CT-5 provides a
16 brief summary of each conservation program that includes a program description,
17 program accomplishments, annual program expenditures, significant program cost
18 variances versus projections and a program progress summary over the twelve-month
19 period ending December 2023. Schedule CT-6 is DEF’s capital structure and cost rates.

20

21 **Q. Would you please discuss Schedule CT-1?**

1 A. Yes. Schedule CT-1 line 14 shows that DEF's actual end-of-period ECCR true-up for
2 December 31, 2023, was an over-recovery of \$3,699,623, including principal and
3 interest.

4
5 **Q. What does Schedule CT-2 show?**

6 A. The four pages of Schedule CT-2 provide an annual summary of conservation
7 program revenues as well as itemized conservation program costs for the period
8 January 2023 through December 2023 detailing actual, estimated and variance
9 calculations by program. These costs are directly attributable to DEF's Commission-
10 approved programs.

11
12 **Q. Would you please discuss Schedule CT-3?**

13 A. Yes. Page one of Schedule CT-3 provides actual conservation program costs by
14 month for the period January 2023 through December 2023. Page two of Schedule
15 CT-3 presents program revenues by month offset by expenses, a calculation of the
16 end of period net true-up for each month, and the total for the year. Page three
17 provides the monthly interest calculation. Page four of Schedule CT-3 provides
18 conservation account numbers for the 2023 calendar year.

19
20 **Q. What is the purpose of Schedule CT-4?**

21 A. The three pages of Schedule CT-4 show monthly capital investment, depreciation and
22 return for each applicable conservation program.

23

1 **Q. Would you please discuss Schedule CT-5?**

2 A. Yes. Schedule CT-5 provides a brief summary of each conservation program that
3 includes a program description, program accomplishments, annual program
4 expenditures, significant program cost variances versus projections and a program
5 progress summary for the 2023 calendar year.

6
7 **Q. What is the purpose of Schedule CT-6?**

8 A. Schedule CT-6 is the capital structure and cost rates used to calculate the return for
9 each applicable conservation program.

10
11 **Q. What capital structure and cost rates did DEF rely on to calculate the revenue
12 requirement rate of return for the period January 2023 through December
13 2023?**

14 A. DEF used the capital structure and cost rates consistent with the language in Order
15 No. PSC-2020-0165-PAA-EU and Order No. PSC-2022-0357-FOF-EI. The capital
16 structure and cost rates relied on to calculate the revenue requirement rate of return
17 for the period January 2023 through December 2023 are shown on Schedule CT-6.

18
19 **Q. What is the source of data used to calculate the true-up amount.**

20 A. The actual data used in calculating the actual true-up amounts is from DEF's records
21 unless otherwise indicated. These records are kept in the regular course of DEF's
22 business in accordance with general accounting principles and practices, provisions
23 of the Uniform System of Accounts as prescribed by the Federal Energy Regulatory

1 Commission and any accounting rules and orders established by this Commission.
2 Pursuant to Rule 25-17.015(3), F.A.C., DEF provides a list of all account numbers
3 used for conservation cost recovery during the period January 2023 through
4 December 2023 on Schedule CT-3 page 4.

5

6 **Q. Does this conclude your Direct Testimony?**

7 A. Yes.

Program Description and Progress

Program Title: Home Energy Check Program

Program Description: The Home Energy Check Program is a residential energy audit program that give customers an analysis of the energy consumption of their residence as well as educational information on how to reduce energy usage and save money. The audit provides Duke Energy Florida, LLC (DEF) an opportunity to promote and directly install cost-effective measures in customer homes and educate and encourage customers to implement energy-saving practices. The Home Energy Check Program is the foundation for other residential demand-side management programs and offers the following types of energy audits:

- Type 1: Free Walk-Through (computer assisted)
- Type 2: Customer Online (Internet Option)
- Type 3: Customer Phone Assisted
- Type 4: Home Energy Rating (BERS/HERS) Audit

The Home Energy Check Program provides residential customers with energy efficiency tips and examples of easily installed, energy-efficiency measures. The program promotes continued customer involvement by demonstrating sustainable and measurable reductions in energy usage through the implementation of low-cost, energy-efficiency measures and energy-saving recommendations. Participants in the program may receive a residential Energy Efficiency Kit that contains energy-saving measures that can be easily installed and utilized by the customer. Contents of this kit are evaluated periodically and may change over time.

Program Accomplishments - January 2023 - December 2023:

36,915 customers participated in this program.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for this program were \$4,931,626.

Program Progress Summary:

1,104,751 participants have participated in the Home Energy Check Program since inception. DEF will continue to leverage this program to educate customers about cost-effective, energy-efficiency measures they can implement and incentives available for home-energy improvements for which they may be eligible. Additionally, DEF began providing Assistance Kits to low-income customers through this program. The kits contain a number of measures that provide energy efficiency savings to customers.

Program Description and Progress

Program Title: Residential Incentive Program

Program Description: The Residential Incentive Program provides incentives to customers for energy-efficiency improvements for both existing and new homes. The Residential Incentive Program includes incentives for measures such as duct testing, duct repair, attic insulation, replacement of windows, high-efficiency heat pump replacing resistance heat, high-efficiency heat pump replacing a heat pump, and newly constructed Energy Star homes.

Program Accomplishments - January 2023 - December 2023:

11,878 measures were implemented through this program resulting in savings of 2.4 Summer MW, 4.4 Winter MW and 6.5 GWh at the generator.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for this program were \$3,890,296.

Program Progress Summary:

1,120,542 measures have been implemented through this program. This program will continue to be offered to residential customers to provide opportunities for improving the energy efficiency of existing and new homes.

Program Description and Progress

Program Title: Neighborhood Energy Saver Program

Program Description: DEF's Neighborhood Energy Saver program is designed to provide energy-saving education and assistance to low-income customers. This program targets neighborhoods that meet certain income-eligibility requirements. DEF typically installs energy-saving measures in approximately 4,500 homes.

Program Accomplishments - January 2023 - December 2023:
DEF installed numerous energy-efficiency measures in 5,846 homes.

Program Fiscal Expenditures - January 2023 - December 2023:
Expenses for this program were \$6,626,891.

Program Progress Summary:
Since program inception, DEF has installed energy-efficiency measures in 54,878 homes.

Program Description and Progress

Program Title: Low-Income Weatherization Assistance Program

Program Description: The Low-Income Weatherization Assistance Program (LIWAP) is designed to integrate DEF's DSM program measures with assistance provided by the Florida Department of Economic Opportunity (DEO) and local weatherization providers to deliver energy-efficiency measures to income-eligible families. Through this partnership, DEF assists local weatherization agencies by providing energy education materials and financial incentives to weatherize the homes of low-income families.

Program Accomplishments - January 2023 - December 2023:

1,636 weatherization measures were installed on 184 residential homes.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for this program were \$261,798.

Program Progress Summary:

30,207 measures have been implemented through this program. DEF participates in local, state-wide, and national agency meetings to promote the delivery of this program. Meetings with weatherization and other low-income agencies are conducted throughout DEF's territory to encourage customer participation in energy-efficiency programs. This program was recently modified to align the eligibility with that of agencies who provide weatherization services. This change is intended to expand the network of agencies with which DEF can partner.

Program Description and Progress

Program Title: Residential/Commercial Load Management Program

Program Description: The Residential/Commercial Load Management Program is a voluntary demand response program that provides monthly bill credits to customers who allow DEF to reduce peak demand by controlling service to selected electric equipment through various devices and communication options installed on the customer's premises. These interruptions are at DEF's option, during specified time periods, and generally coincide with hours of peak demand. Residential customers must have a minimum, average, monthly usage of 600 kWh to be eligible to participate in this program.

Program Accomplishments - January 2023 - December 2023:

2,916 residential customers were added to the program. The commercial program has been closed to new participants since 2000.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for the residential/commercial load management program were \$31,386,248.

Program Progress Summary:

There were approximately 433,000 residential participants and 59 commercial participants at year-end 2023.

Program Description and Progress

Program Title: Business Energy Check Program

Program Description: The Business Energy Check Program is a commercial energy audit program that provides commercial customers with an analysis of their energy usage and information about energy-saving practices and cost-effective measures that they can implement at their facilities. The Business Energy Check Program serves as the foundation for the Better Business Program.

Program Accomplishments - January 2023 - December 2023:

479 commercial energy audits were completed.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for this program were \$567,655.

Program Progress Summary:

44,768 non-residential customers have participated in the Business Energy Check Program since inception. This program continues to educate and inform commercial customers about cost-effective, energy-efficiency improvements.

Program Description and Progress

Program Title: Better Business a/k/a Smart Saver Business Program

Program Description: This umbrella efficiency program provides incentives to existing commercial, industrial, and governmental customers for heating, air conditioning, ceiling and roof insulation upgrades, duct leakage and repair, demand-control ventilation, cool-roof coating, high-efficiency, energy-recovery ventilation, and HVAC-optimization-qualifying measures.

Program Accomplishments - January 2023 - December 2023:

Incentives were provided to customers for 216 commercial energy efficiency measures through this program.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for this program were \$1,751,596.

Program Progress Summary:

Incentives have been provided to customers for 23,622 commercial energy-efficiency measures through this program since inception.

Program Description and Progress

Program Title: Smart Saver Custom Incentive Program

Program Description: The Smart Saver Custom Incentive Program (f/k/a Florida Custom Incentive Program) is designed to encourage commercial and industrial customers to make capital investments for energy-efficiency measures which reduce peak demand and provide energy savings. This program provides incentives for individual, custom projects which are cost-effective but not otherwise addressed through DEF's prescriptive incentive programs. Examples of energy-efficient technologies that would be considered under this program include but are not limited to new construction measures and new thermal energy storage systems.

Program Accomplishments - January 2023 - December 2023:

There were 0 customers who participated in this program.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for this program were \$213,508.

Program Progress Summary:

457 projects have received incentives through this program since inception. This program continues to target customer-specific, energy-efficiency measures not covered through DEF's prescriptive commercial programs.

Program Description and Progress

Program Title: Standby Generation

Program Description: The Standby Generation Program is a demand response program that allows DEF to reduce system demand by dispatching the customer's standby generator. This is a voluntary program available to commercial and industrial customers who have on-site generation capability.

Program Accomplishments - January 2023 - December 2023:

DEF added four accounts to this program.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for this program were \$6,047,277.

Program Progress Summary:

There were 187 active/enrolled accounts at year-end 2023, providing 83 of winter MW load control at the generator.

Program Description and Progress

Program Title: Technology Development

Program Description: The Technology Development Program is designed to allow DEF to investigate technologies that support the development of new demand response (DR) and energy-efficiency (EE) programs. This program includes but is not limited to, technological research, field demonstration projects, research on load behavior and demand-side management (DSM) measures and other market-related research.

Program Accomplishments - January 2023 - December 2023:

Several research and development projects were completed, continued and/or launched in 2023.

- Launched a project to evaluate the energy efficiency and demand response capability of an energy storing, ultra-efficient, commercial packaged air conditioner technology that combines dew-point-style sensible cooling with liquid desiccant dehumidification. This technology implements indirect evaporative cooling using a liquid desiccant. This desiccant can be recharged and stored in a tank for use later. This stored energy can be used to make the peak power consumption very low. We are piloting this technology compared to standard packaged units at a volunteer customer site. The energy consumption of this technology will be documented. If the testing is successful, this technology could be included in future EE and DR programs.
- Continued a project to evaluate the demand response capability of the Ford Lightning Electric Pickup Truck in a Vehicle-to-Grid (V2G) configuration. The pilot will consist of lab testing of the vehicle, electric vehicle charger and home integration system. We will also test the system in 4 employee volunteer DEF customer homes. This project will focus on the capabilities of the Ford Lightning EV to provide V2G demand response, Vehicle-to-Home backup power and EV charging control. These systems could be a valuable future potential resource as a component of DEF's DR Portfolio.
- Continued a project with the University of Central Florida (UCF) to document the value of long-duration customer-side energy storage systems. This project is using the technology at UCF's Microgrid Control lab to directly test a long-duration energy storage system. Use cases to be investigated include study of battery performance during charging and discharging, documenting the effects of cycling on battery performance (battery degradation, efficiency, etc.), optimal operation of a battery energy storage system in a distribution system with high penetration of solar energy, control of behind-the-meter distributed energy resources to provide services including, peak capacity management, demand response (consuming or generating), frequency regulation, ramping capability and voltage management.

Program Description and Progress

- Continued a pilot to develop software, firmware, and applications for a Smart Home Gateway to evaluate the potential for a future home energy management program and its ability to enhance the Company's future energy efficiency and DR programs. The Smart Home Gateway currently includes processing and communications capabilities to perform on-site operations including receiving energy data from the customer's AMI meter, communications using four radios and on-site processing. Capabilities were developed and tested that included enabling appliance demand response using CTA-2045 (EcoPort) local control and enabling local control of Energy Management Circuit Breakers (EMCBs) for monitoring and demand response. These technologies allow automatic control of devices according to the customer's preference, and enabling open-source, utility-demand response using OpenADR. The Smart Home Gateway can also be used to engage customer awareness of how energy is being used in the home. These capabilities will be considered in the development of future EE and DR programs.
- Continued a project with the University of South Florida (USF) to leverage customer-sited solar PV and energy storage at the USF 5th Avenue Garage Microgrid. The system provides load smoothing, islanding, and demand response. A publicly available dashboard that shows live data, project specific facts and the capability of downloading data for further study is available for the site at <https://dashboards.epri.com/duke-usfsp-parking>. The result of this research may be used for the design of a potentially cost-effective DR program. USF continues its research on microgrid operation.
- Continued the Electric Power Research Institute (EPRI) Solar DPV project for data collection to document customer solar resources with a focus on larger PV arrays with and without energy storage. This project also provides the data stream for the dashboard mentioned above.
- Completed participation in an EPRI project to study the potential of using customer demand response to compensate for variable loads and intermittent renewable generation resources.
- Completed a project that will provide knowledge in methods to utilize customer Wi-Fi infrastructure to develop a dedicated, durable, and secure utility communication channel to connected devices. The project will also provide knowledge on the effectiveness of Wi-Fi-signal-strength-improvement technology. This technology could lead to lower costs and improved cost-effectiveness for existing and future DR and EE programs.
- Completed a project to evaluate the demand response capability of internet-connected residential batteries. Residential batteries potentially offer the ability to provide power reduction for demand response while eliminating any discomfort to the customer (as compared to residential appliance demand response). Certain battery manufacturers have developed technologies that allow for the collection of capacity and charge data, communication protocols for external aggregator software providers, and the ability to dispatch stored energy to serve the needs of the customer or the grid. This project focused on the capabilities of a particular

Program Description and Progress

aggregator to collect data from two battery manufacturers, the feasibility of utilizing aggregation technology for dispatching demand response event commands, and the net impact of these events on shaping demand. Such aggregation system enabled existing units that are already installed by residential customers in DEF territory to be used in this study. The results of this study will be used to develop future demand response programs utilizing customer energy storage.

- Partnered with EPRI and other research organizations to evaluate EE, energy storage, and alternative energy/innovative technologies.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for this program were \$377,765.

Program Progress Summary:

DEF continued to focus on researching and testing new technologies which has the potential to provide new programs and create new customer offerings.

Program Description and Progress

Program Title: Qualifying Facility (QF)

Program Description: The purpose of this program is to meet the objectives and obligations established by Section 366.051, Florida Statutes, and the Commission's rules contained within Chapter 25-17, Florida Administrative Code, regarding the activity and purchase of as-available energy and firm energy and capacity from Qualifying Facilities (QF), including those that utilize renewable sources as defined in Section 366.91, Florida Statutes, pursuant to an as-available tariff, standard offer contract or negotiated contracts.

Under the QF program, DEF facilitates and administers the power purchases from QF and state jurisdictional interconnections. This Program develops standard offer contracts, negotiates, enters, amends, restructures, and terminates non-firm energy, firm energy and capacity contracts entered with qualifying cogeneration, small power producers and renewable facilities.

Program Accomplishments - January 2023 - December 2023:

Avoided cost and generator interconnection service activity with renewable and distributed resource (DR) developers continued in 2023. DEF provided QF, renewable, or DR-related information to many interested parties who are exploring distributed generation options in Florida. Numerous calls and meetings were held with parties interested in the advancement of their DR project. Meetings were also held with current and existing QF under contract to discuss restructuring and extending existing purchased power agreements. DEF continued evolving its analytics, forecasts and business processes required to support good faith QF-purchased power negotiations and interconnection service.

DEF successfully administered all existing QF-purchased power contracts that are in-service for contractual compliance. As of December 31, 2023, DEF had over 5,100 MW of solar projects in various stages of project development including grid interconnection. There were 114 active project applicants for all generation technologies in DEF's system interconnection process. The QF-purchased power contracts produced more than 2.44 million-MWh for DEF customers during 2023.

Program Fiscal Expenditures - January 2023 - December 2023:

Expenses for this program were \$676,851.

Program Progress Summary:

As of December 31, 2023, DEF administered approximately 411 MW of firm capacity contracts from in-service QF, and 5 non-firm as-available energy QF contracts. As of December 31, 2023,

Program Description and Progress

DEF administered both QF pre-applications for state jurisdictional interconnections, and QF applications for its Federal Energy Regulatory Commission jurisdictional generator interconnection process. 2023 ended with over 3,600 MW of potential QF generators in various stages of development and DEF grid interconnection.
