Subject: Water utility rates

CAUTION: This email originated from outside your organization. Exercise caution when opening attachments or clicking links, especially from unknown senders.

I was just reading an article regarding the utility rates for the next 4 years. The article stated that the water utility in Polk county is going to raise their rates by 6% for every year up to 2028. How can the FPSC allow them to do that. When the recession sets in they will come to scalp us. I could see a two year increase rate, but how can they predict an increase that far out. That is larger than my wage increase and I feel like trudging water trying to get up stream. I disagree with this rate increase and hope that the FPSC can still stop it.
