To whom it may concern

Please deny the rate increase FPL has requested. I see no point allowing them to increase their rates yet again. As a consumer, I have no choice about where my power comes from and it really gets me upset when I think about it. FPL has done nothing but raise their rates and no change to the grid. My power lags on a regular basis. My monthly bill keeps going up despite me taking steps to reduce my consumption. On my bill the power consumption is itemized. It shows that I am being charged for fuel sourced and "non-fuel" sourced energy. How do they determine which I am using. I can only assume the nonfuel energy is this "green " energy from solar and wind power generators, so why does it cost double the price of fuel sourced energy? After mulling it over and reading it a couple time I still don't get it... Nonfuel energy costs me \$0.09/KWh for the first 1000KWh then it just up to \$0.11/KWh.. While fuel source is only \$0.03/KWh then \$0.05 after 1000KWh... Again, who determines which energy source I use and why does it always seem that I use more of the non-fuel energy every month at an increasing rate over the fuel energy. I want this to stop and I want the rates to not change. I want to have a choice of which company I use for energy and I want to be able to opt out of the non-fuel sourced energy or at least not get charged double for it... it should be cheaper (less than the \$.05/KWh) because it's green and we were promised that it would reduce the rates charged for power. Please stop allowing them to raise rate.

Sincerely
Chris Irland
