INTERROGATORY NO. 9(a-c)

9. **Depreciation**.

a. Explain the significance of each of the calculations which are occurring on pages 93-94 of FCG Attachment A, 2025 Depreciation Study of Florida City Gas.

b. State where the result of this calculation is used in the determination of the FCG proposed reserve surplus.

c. Is the $27,347,169 imbalance as of 1/1/2025 shown on page 32 of FCG Attachment A, 2025 Depreciation Study of Florida City Gas in some manner based on the assumption that the reserve imbalance as calculated but not used in the 2022 case is still valid and used in the calculation of the $27,347,169 imbalance as of 1/1/2025? If not, what is the purpose of these calculations on pages 93-94 of FCG Attachment A, 2025 Depreciation Study of Florida City Gas?

Company Response:

a. Schedule M, page 93, shows the allocation of the $25 million reserve surplus approved in Order No. PSC-2023-0177-FOF-GU, page 17, to FCG's accounts. Schedule N, page 94, shows the amount of the approved $25,000,000 amortization surplus FCG booked in 2023 and 2024.

b. The January 1, 2025 book reserve reflects the amortization of the $25M reserve surplus approved in the Docket No. 20220069-GU. The portion of the reserve surplus applied by the Company in 2023 and 2024 is reflected under the heading "Surplus Applied" on Schedules G 2023 and 2024 of the Depreciation Study Workbook. Schedule G 2024's ending reserve balance flows through to Schedules A-E. Schedule E computes the

theoretical reserve based on the proposed life and salvage components for each account with a resulting total reserve surplus of $27.3 million as shown in the original filing. However, this amount was incorrect. Based on revisions made as a result of FCG's responses to Staff's Data Request 3, filed on August 5, 2025, and additional corrections added as a result of responding to OPC ROG 2-10b, the calculated reserve imbalance was recalculated as $22.4 million. See Attachment OPC ROG 2-9 for the updated workbook, which includes all corrections presently known to FCG.

Schedule A of the Study workbook, column D, row 65, is the sum of the actual 12/31/2024 book reserve with study adjustments shown on pages 32 and 33, Schedules E (column D, row 52) and E-1 p1 (column C, row 27), and reflects the result of the $25,000,000 reserve surplus amortization in 2023 and 2024 approved in the above referenced docket.

c. No, the 2025 proposed calculated surplus is the result of a theoretical reserve calculation based on FCG's proposed life and salvage proposals compared to the actual book reserve, by account, as directed by Rule 25-7.045, F.A.C. without consideration of the calculated remaining 2022 reserve surplus balance in Docket No. 20220069-GU. Also, see response to 2-9b above.

Schedules M and N of the workbook were provided for informational purposes only. The sole purpose of these schedules is to show the account allocation of the authorized $25M surplus in Docket No. 20220069-GU from 2023 to 2024.

	TOTAL GAS PLANT	$709,099,300	$198,037,220	(L)

(A) Proposed changes to amortization period to streamline operations. All other Chesapeake Natural Gas business units uses these proposed amortization periods.
Rate is computed as follow: Annual Amortization/Depreciation Rate = 100 %/Amortization Period*100

(B) Proposed account number restatement based on Chesapeake's Natural Gas chart of account.
Reclassified Misc. Intangibles from Account 30302 to Account 3031.
Reclassified Steel Mains from Account 3761 to Account 3762 and Plastic Mains from Account 3762 to Account 3761.
Reclassified Steel Services from Account 3801 to Account 3802 and Plastic Services from Account 3802 to Account 3801.
Reclassified ERTs from Meter Account 3811 to Account 3812.

(C) Proposed reserve transfers to correct the negative reserve balance in Acct 3821 and bring the reserve balance to its theoretically correct level.

(D) Proposing same amortization period used for all Chesapeake Natural Gas business units. This adjustment restates intangible and general plant accounts to their theoretical levels using the newly proposed amortization period.

(E) Adjustment to retire amortizable general plant investments with an age greater than proposed ASL.

(F) Theoretical surplus after restating accounts to theoretically correct reserve levels

(G) Adjusted Book Investment with Study Adjustments have been Restated to include retirements of assets with an age greater than the proposed ASL.

(H) Adjusted Book Reserve with Study Adjustments have been restated to include a proposed reserve transfer, retirements of assets with an age greater than the proposed ASL, and a proposed adjustment to bring all accounts to its theoretical reserve balance. See notes (C)-(F) for more details on adjustments.

(I) Proposed restatement of the Office Furniture and Equipment assets based on currently approved subaccounts used for all Chesapeake's Natural Gas business unit's (Sch H).

(J) Proposed restatement of Transportation Assets based on Chesapeake's other natural gas business unit's currently approved subaccounts (Sch I).

(K) The rate for the embedded as well as for new investments will be the same as a result of restating the reserve accounts for intangible and general plant to its theoretically correct levels.

(L) Amortized the Theoretical Reserve surplus and Intangible/General Plant deficit over 2 years

PROPOSED AMORTIZATION/DEPRECIATION RATES - POST RATE CASEAPPROVAL (A)

ACCOUNT	DESCRIPTION	AMORT. PERIOD	AMORT./DEPR. RATE
3031	Miscellaneous Intangible Plant - 15 Yrs	15	6.67

Notes:

(A) Current parameters are from Table 1 of PSC Order No. PSC-2023-0177-FOF-GU, in Docket No. 20220069-GU. Some accounts were restated to reflect Chesapeake's standard natural gas subaccounts. The depreciation parameters for LNG assets in Accounts 376X, Power Op Equip in Account 3960, and Amortized General Plant Accounts 391X, 3930, 3940, 3950, 3970, and 3980 were not undated in the last study. These parameters were approved by Order No. PSC-2018-0190-FOF-GU in Docket No. 20170179-GU.

(B) Restated all Office Furniture and Equipment and Software assets based on proposed subaccounts shown on Sch H.

(C) Restated all Transportation assets based on proposed subaccounts shown on Sch I.

(D) Restated account numbers based on Chesapeake's standard chart of account for all natural gas business units. All CHPK's natural gas business units uses the same chart of accounts to streamline operations. Reclassified Misc. Intangibles from Account 30302 to Account 3031. Reclassified Steel Mains from Account 3761 to newly proposed account 3762. Reclassified Plastic Mains from Account 3762 to newly proposed account 3761. Reclassified Steel Services from Account 3801 to newly proposed account 3802. Reclassified Plastic Services from Account 3802 to newly proposed account 3801. Reclassified ERTs from Meter Account 3811 to newly proposed account 3812.

Notes:

(A) Restated account numbers based on Chesapeake's standard chart of account for all natural gas business units. All CHPK's natural gas business units uses the same chart of accounts to streamline operations. Reclassified Misc. Intangibles from Account 30302 to Account 3031. Reclassified Steel Mains from Account 3761 to newly proposed account 3762. Reclassified Plastic Mains from Account 3762 to newly proposed account 3761. Reclassified Steel Services from Account 3801 to newly proposed account 3802. Reclassified Plastic Services from Account 3802 to newly proposed account 3801. Reclassified ERTs from Meter Account 3811 to newly proposed account 3812.

(B) Restated all Office Furniture and Equipment and Software assets based on proposed subaccounts shown on

(C) Restated all Transportation assets based on proposed subaccounts shown on Sch I.

						ANNUAL AMORTIZATION	**($11,173,798)**		

Restated account numbers based on Chesapeake's standard chart of account for all natural gas business units. All CHPK's natural gas business units uses the same chart of accounts to streamline operations. Reclassified Steel Mains

(A) from Account 3761 to newly proposed account 3762. Reclassified Plastic Mains from Account 3762 to newly proposed account 3761. Reclassified Steel Services from Account 3801 to newly proposed account 3802. Reclassified Plastic Services from Account 3802 to newly proposed account 3801. Reclassified ERTs from Meter Account 3811 to newly proposed account 3812.

(B) Restated all Transportation assets based on proposed subaccounts shown on Sch I.

(C) Reserve Balance Restated to include Proposed Reserve Transfer

2025 NATURAL GAS DEPRECIATION STUDY

As of 1/1/2025

PLANT IN SERVICE AND RESERVE SUMMARIES

2022 Notes

Schedule	Column	Account	Amount	Explanation
Plant/Reserve	All	3761/3762	Various	Restated account numbers based on Chesapeake's other natural gas chart of account. All CHPK's natural gas business units uses the same chart of accounts to streamline operations. Reclassified Steel Mains from Account 3761 to newly proposed account 3762. Reclassified Plastic Mains from Account 3762 to newly proposed account 3761. Reclassified Steel Services from Account 3801 to newly proposed account 3802. Reclassified Plastic Services from Account 3802 to newly proposed account 3801.
Plant/Reserve	All	3801/3802	Various

FLORIDA CITY GAS
2025 NATURAL GAS DEPRECIATION STUDY
As of 1/1/2025
PRIOR YEARS RESERVE ADJUSTMENTS

ACCT	DESCRIPTION	Adjustments	Adj. Description
3030	Misc Intang Plant	($25,528)	Moved Starnik Software Enhancement from 3030 to Acct 3032
3032	Misc Intang Plant - Software 20 Yrs.	$25,528	
3030	Misc Intang Plant	($313,482)	Software transferred in at acquisition was recorded in account 3030 instead of 30302. Study reclassifies the balance to 3031.
3031	Misc Intang Plant - Software 15 Yrs.	$313,482	
3810	Meters	$4,768	Moved Meter related project costs to Acct 3810 from 392X
3870	Other Eq	$20,773	Moved SCADA tools to Acct 3870 from 392X
3900	Struc&Impr	$6,651	Moved Facility updates to Account 3900 from 391X
3910	Office Equip	($421,005)	Reclassifed assets using CHPK's chart of accounts and moved missclassified assets to the proper FERC account
3911	Computer & Periph	($75,811)	
3912	Computer Hardware	$913,452	
3913	Office Furniture	$447,729	
3915	Personal Computer Equipment	($908,548)	
3920	Transp Equip	$4,210	Excluded from Study - there is no asset with same vintage to offset amount
3923	HD Truck/Bobtail	$56	
3920	Transportation - Equip	($185,479)	Reclassifed assets using CHPK's chart of accounts and moved missclassified assets to the proper FERC account
3921	Transportation - Cars	($848,725)	
3922	Transportation - LT Truck &Van	$697,145	
3923	Transportation - HD Truck/Bobtail	$124,123	
3924	Transportation - Trailers	$100,946	
3960	Pwr Op Equip	$1,114	Moved Excavator Machine to Acct 3960 from 392X
3980	Misc Equip	$48,189	Moved veh remote tracking equipment and dash cams to Acct 3980 from 392X
3980	Misc Equip	$2,952	Moved Kitchen Equipment to Acct 3980 from 391X
3980	Misc Equip	$34,580	Moved iPad configuration Equipment to Acct 3980 from 391X
3922	LT Truck &Van	($163,062)	Estimated total of Ret'd Vehicles
3922	LT Truck &Van	$12,000	Estimated Salvage on Ret'd Vehicles
Total		**($183,942)**

Restated account numbers based on Chesapeake's standard chart of account for all natural gas business units. All CHPK's natural gas business units uses the same chart of accounts to streamline operations. Reclassified Steel Mains from Account 3761 to newly proposed account 3762. Reclassified Plastic Mains from Account 3762 to newly proposed account 3761. Reclassified Steel Services from Account 3801 to newly proposed account 3802. Reclassified Plastic Services from Account 3802 to newly proposed account 3801. Reclassified ERTs from Meter Account 3811 to newly proposed account 3812.

INTERROGATORY NO. 10(a-b)

10. **Depreciation**. Page 32 of FCG Attachment A, 2025 Depreciation Study of Florida City Gas shows the Book Reserve w/ Study Adjustments (1/1/2025).

a. For each account, provide the 1/1/2025 Book Reserve **NOT Adjusted**, and identify the FCG ledgers which shows the actual book reserve by account **NOT Adjusted**.

b. By account, show the amount and explain each adjustment made to the book reserve amounts.

Company Response:

a. See Attachment OPC ROG 2-10a for CFG's unadjusted Book Reserve Balance at 1/1/25.

b. Please see Attachment OPC ROG 2-10b for reserve study adjustments. Schedule K in the 2025 Depreciation Study Workbook reports reserve adjustments of $88,712. The actual adjustments for the 2025 Study is ($183,942). Schedules A-E-3, G 2024, and K have all been revised to reflect the correct balances in Attachment OPC ROG 2-9b. OPC ROG 2-9b has been updated to reflect all corrections presently known to FCG, including the revisions filed on August 5, 2025 relating to Staff's Data Request 3.

Respondent: Patricia Lee and Bety Maitre

INTERROGATORY NO. 11(a-f)

11. **Depreciation**.

a. Page 32 of FCG Attachment A, 2025 Depreciation Study of Florida City Gas for account 3801 Services - Plastic shows a 20.15 Theoretical Reserve Percent. Using the inputs that FCG is recommending for this account (such as 47.00 ARL, etc), identify the work papers which show the calculations of the 20.15 Theoretical Reserve Percent number. Identify all Iowa Curve tables or other source documents needed to track the calculation of this 20.15 in detail.

b. State what column of the Iowa Curve table identified in response to part (a) shows the 20.15 number.

c. Identify the same information requested in part (a) and (b) for the 17.55 Theoretical Reserve Percent for Account 3761 Mains-Plastic and the 36.80 for Account 3762 Mains-Steel.

d. Cite the page(s) in the attached except from *Public Utility Depreciation Practices*, published by NARUC (August 1996) which shows the calculation of the theoretical reserve percentage using the method identified in response to the prior portions of this request.

e. Is it correct that the 20.15 Theoretical Reserve Percent FCG calculated for Account 3801 Services -Plastic is based on the 47.00 ARL that FCG had calculated for this account? If this is not a correct statement, provide the corrected statement and the support for the corrected statement.

f. Since FCG had the investment amounts by vintage year (as shown on page 82 of the FCG 2025 Depreciation Study), why did FCG not calculate the theoretical

INTERROGATORY NO. 11(a-f), cont.

reserve amount by vintage as shown on page 191 and/or on page 193 of the attached excerpt from *Public Utility Depreciation Practices*, published by NARUC (1996)?

Company Response:

a. See revised Sch E of the attached Excel workbook Attachment OPC ROG 2-9b, which includes all corrections presently known to the Company. The formula for calculating the theoretical reserve is found in Rule 25-7.045 (1)(k), and 4(k), F.A.C. The curve shape used in the calculation is the Company proposed curve shape found on Sch A and Sch B, under the Curve Heading.

b. The theoretical reserve is not shown on the life table. It is a calculation. See response to 2-11a above.

c. See response to 2-11a and 2-11b above.

d. Page 190 from *Public Utility Depreciation Practices*, published by NARUC (August 1996) shows the formula for calculating the theoretical reserve percentage using the method identified in Rule 25-7.045 1(k), F.A.C. See Attachment OPC ROG 2-11d for NARUC *Public Utility Depreciation Practices*, pages 189-191.

e. Correct.

f. The FPSC does not require the calculation by vintage. Moreover, while Table 13-1 on page 191 of the NARUC 1996 *Public Utility Depreciation Practices* illustrates the theoretical reserve calculation by vintage, NARUC is clear on page 190 that the calculation may be made by vintage but does not preclude calculation on an account or category basis as FCG has done. Also, see response to 2-11d above. Further, FCG notes that the theoretical reserve calculation example illustrated on Table 13-1, page 191, of the

FPSC EXH NO. 40
ADMITTED

INTERROGATORY NO. 11(a-f),cont.

NARUC *Public Utility Practices* attached to OPC's Second Set of Interrogatories yields the same theoretical reserve as using the FCG and Commission calculation. Both calculations yield a 40.1% theoretical reserve.

Respondent: Patricia Lee and Bety Maitre

FPSC EXH NO. 40
ADMITTED
E4865

When a depreciation reserve imbalance exists, one should investigate why past depreciation rates, average service lives, salvage, or cost of removal amounts differ from current estimates. Care should be taken to analyze these effects before correcting for the reserve imbalances. Instances will occur where subsequent experience shows the original estimates no longer to be appropriate. It should be noted that only after plant has lived its entire useful life will the true depreciation parameters become known. Recognizing the nature of depreciation and its requirement for future estimations, no adjustment in annual depreciation accruals to reflect a reserve requirement, based on current rates, should be made unless there is a clear indication that the theoretical reserve is materially different from the book reserve.

Whereas the judgement of materiality is subjective, if further analysis confirms a material imbalance, one should make immediate depreciation accrual adjustments. The use of an annual amortization over a short period of time or the setting of depreciation rates using the remaining life technique are two of the most common options for eliminating the imbalance. The size of the plant account, the reserve ratio, the account remaining life, the technology of the plant in the account, and the account reserve imbalance in relationship to the account annual accrual all have a bearing on the chosen course of action.

Calculating a Theoretical Depreciation Reserve

There are two accepted methods for calculating a theoretical depreciation reserve, the prospective method and the retrospective method.

For any given class of depreciable plant, the theoretical reserve plus the estimated future depreciation accruals equals the service value of the plant (i.e., book cost less estimated net salvage). Under the prospective method, the future depreciation accruals are first estimated. Under the retrospective method, the aggregate of past net accruals (annual depreciation accruals less salvage and cost of removal) is determined.

Future depreciation accruals represent the estimated aggregate of annual depreciation charges during the average remaining life of the plant. Future depreciation accruals are based on the best available data as to past and future conditions affecting the average service lives and net salvage percentages of plant. Past accruals are calculated based upon depreciation rates deemed reasonable for the future but applied to the annual average historical plant balances.

Reasonable estimates of plant service lives, net salvage percentages, and resulting depreciation rates incorporating future conditions are used to estimate the theoretical depreciation reserve.

Prospective Method

As previously expressed, the theoretical reserve, as of the study date, is equal to the plant balance minus future accruals (the depreciation rate times the average annual plant balance times the expected remaining life in years) and minus estimated net salvage value expected at the end of the plant's average life. Expressed as a percent of book cost of plant, the theoretical reserve ratio using the prospective method is:

E4865

FPSC EXH NO. 40
ADMITTED
E4866

$$TR = (100\% - S_f) - (100\% - S_a)(ARL/ASL) \quad (1)$$

where TR is the theoretical reserve ratio
where S_f is the future net salvage
where S_a is the average net salvage percentage, calculated by averaging the total net salvage experienced to-date with the estimated future net salvage
where ARL is the average remaining life
where ASL is the average service life

Future credits to the depreciation reserve are the sum of the future annual accruals over the average remaining life of the plant plus future net salvage. Future accruals are calculated by multiplying the current depreciation rate, using the whole life technique, by the estimated average remaining life of the plant investment as shown below. Expressed as a mathematical formula, the future accruals are:

$$A_f = d * ARL \quad (2)$$

where A_f is the future accruals
where d is the current depreciation rate, using the whole life technique
where ARL is the average remaining life

If the theoretical reserve is developed for several depreciable property groups contained in an account, an individual depreciation rate must be used for each depreciable property group. It would be improper to use the account rate. The formula for determining this rate is as follows:

$$d = (100\% - S_a)/ASL \quad (3)$$

where d is the current whole life depreciation rate
where S_a is the calculated average net salvage percentage (the composite of the future net salvage and the net salvage realized in the past)
where ASL is the average service life of the particular category of plant

The prospective method is illustrated in Table 13-1. This example of a theoretical reserve is developed for a total category. However, a theoretical reserve may be developed for each vintage.

E4867

INTERROGATORY NO. 12(a-c)

12. **Depreciation.** Staff's Third Set of Data Requests, Nos. 1 and 2, indicate that FCG calculates the Average Remaining Life by calculating the average account age, and then looking up on the Iowa Curve the Average Remaining Life associated with that average age.

Page 133 of the attached excerpt from *Public Utility Depreciation Practices*, published by NARUC (August 1996) shows calculating the average remaining life using the different remaining life separately for each age (then calculating an average from data from all ages).

a. Please indicate which page(s) in the attached excerpt from *Public Utility Depreciation Practices*, published by NARUC show calculating the Average Remaining Life using the method FCG has used in this filing (looking up just the remaining life of one age, which age is equal to the FCG calculation of the average account age).

b. Since FCG had the investments by age (as shown on page 82 of the FCG 2025 Depreciation Study), why did FCG not calculate the average remaining life by using the different remaining life separately for each age as shown on page 133 of the attached *Public Utility Depreciation Practice?*

c. Admit or deny that the way FCG calculated the average remaining life can result in a different number for the calculated average remaining life than would be calculated as shown on page 133 of the attached *Public Utility Depreciation Practice* [using the different remaining life separately for each age]? If this is not a correct statement, provide the correct statement and the support for the correct statement.

FPSC EXH NO. 40
ADMITTED

INTERROGATORY NO. 12(a-c), cont.

Company Response:

a. The remaining life calculation is made in conformance with the formula in Rule 25-7.045(1)(e), F.A.C. There is no FPSC requirement that the calculation be made by vintage.

b. See response to 2-12a above. Additionally, the FCG determination of average remaining life has been used and approved in many Commission depreciation studies. The remaining lives approved in the following dockets were calculated based on a curve shape, average age of the surviving investments, and average service life – Docket Nos. 20230022-GU, 20230079-EI, 20220067-GU, 20210183-GU, 20190056-GU, and 20080170-GU.

c. FCG objects to the extent this question takes the form of a request for admission, but is cast as an interrogatory and is therefore presented in an objectionable form that is unclear and confusing. Notwithstanding this objection, and without waiving, FCG states as follows: The average remaining life calculations, whether by vintage or on an entire account or category basis, can result in different remaining lives, but the difference should generally not be that significant. Additionally, the FCG calculation of remaining life has been approved by the FPSC in many depreciation studies as noted in response to b above. A remaining life is defined as the remaining period of service which can be expected, on the average, from the equipment under study. This period is measured from the time of implementation of the depreciation rates under study being designed to the expected ultimate retirement of the embedded investment in the equipment type under discussion. This may be through direct planning for the retirement, or derived as a function of the age of the equipment type under discussion, its expected average service life, and the expected

ADMITTED

INTERROGATORY NO. 12(a-c), cont.

future retirement pattern (curve shape). The NARUC 1996 *Public Utility Depreciation Princi*ples does not preclude deriving the average remaining life the way FCG has.

Respondent: Patricia Lee and Bety Maitre

E4870

INTERROGATORY NO. 13(a-b)

13. **Depreciation.**

a. Does FCG agree that the change in depreciation rates that was proposed in Florida City Gas in Docket No. 20220069-GU was part of a petition for a base rate increase, which means that the change in the depreciation rates which would be booked would be effective at approximately the same time that the revised prices/tariffs charged to ratepayers would be effective? If this is not a correct statement, please provide the corrected statement and the support for the corrected statement.

b. Does FCG agree that the change in depreciation rates proposed by Florida City Gas in the current proceeding is not part of a petition for a base rate increase, and if accepted, no change to the prices/tariffs charged to ratepayers would be effective at approximately the same time changes to the depreciation rates to be booked would be effective? If this is not a correct statement, please provide the corrected statement and the support for the corrected statement.

Company Response:

a. FCG agrees that, as part of its petition for a base rate increase in Docket No 20220069-GU, an implementation date for revised depreciation rates was requested effective with the date of FCG's new revenue rates. However, FCG's plant and reserve balances were submitted as of December 31, 2022, matching an implementation date for revised depreciation rates of January 1, 2023. PSC Order No. PSC-2023-0177-FOF-GU, page 17, approved a January 1, 2023 effective date for revised depreciation rates comporting with Rule 7.045(4)(d), F.A.C.

Respondent: Patricia Lee and Bety Maitre

INTERROGATORY NO. 13(a-b), cont.

b. Correct. Revised depreciation rates approved in the instant depreciation study, assuming a January 1, 2025 effective date as proposed, will not affect current prices/tariffs charged to ratepayers whether that change results in an increase or a decrease in depreciation expenses. Rule 25-7.045 (4), F.A.C., requires utilities to file depreciation studies at least once every five years. The Rule does not preclude a utility from filing a depreciation study sooner than five years. Moreover, the requirement does not contemplate that a rate case be filed in conjunction with the depreciation study. However, if a utility proposes an effective date for revised depreciation rates coinciding with an expected date of new revenue rates, the depreciation study is required to be filed no later than the filing of the rate case Minimum Filing Requirements.

Respondent: Patricia Lee and Bety Maitre

INTERROGATORY NO. 14(a-b)

14. **Depreciation**.

a. Reconcile the differences between the amounts in the Book Reserve with Study Adjustments 1/1/2025 on page 32 of the FCG 2025 Depreciation Study and the 12/31/2024 amounts on page 15 of the Florida City Gas Annual Report to the Commission for the year ending December 31, 2024. Provide this for all accounts, but especially for Account 3761, 3762, 3801, and 3802.

b. Reconcile the differences between the amounts in the Book Investment with Study Adjustments 1/1/2025 on page 32 of the FCG 2025 Depreciation Study and the 12/31/2024 Plant in Service amounts on pages 13-14 of the Florida City Gas Annual Report to the Commission for the year ending December 31, 2024. Provide this for all accounts, but especially for Account 3761, 3762, 3801, and 3802.

Company Response:

a. See Attachment OPC ROG 2-14a for a reconciliation of the Book Reserve with Study Adjustments from page 32 of the Study to the Company's Annual Report filed with the Florida Public Service Commission for the year ending 2024.

b. See Attachment OPC ROG 2-14b for a reconciliation of the Book Investment with Study Adjustments from page 32 of the Study to the Company's Annual Report filed with the Florida Public Service Commission for the year ending 2024.

Respondent: Patricia Lee and Bety Maitre

FPSC EXH NO 40
ADMITTED

INTERROGATORY NO. 15(a-b)

15. **Depreciation**.

a. In the prior FCG proceeding, Docket No. 20220069-GU, please refer to the FCG Witness Allis, Exhibit NWA-1 page 58. Using the line of 30.5 years, is it correct that the Retirement Ratio shown on that line was calculated by dividing the original cost of Retirements which were 30.5 (to 31.5 years) old, by the original cost of Exposures which were also 30.5 (to 31.5 years) old? If this is not a correct statement, provide the correct statement and the support for the correct statement.

b. In the current proceeding, on page 235 of the FCG 2025 depreciation study, FCG calculates the Retirement Rates for 2024 by dividing the original cost of Retirements which retired in the year 2024 by the original cost of the Plant in Service at the end of 2024. On page 83 of the FCG 2025 Depreciation Study FCG says that for Account 3801 Service – Plastic, the Average Age of the investments in that account is 10.5 years. On page 29 of the FCG 2025 Depreciation Study FCG says that for Account 3801 Service – Plastic, the Average Service Life is 55 years. Does FCG agree that because of inflation, an original cost which was recorded 55 years ago would in general be a lower dollar amount than the dollar amount of an original cost of a similar item recorded 10.5 years ago?

Company Response:

a. Yes. to the best of FCG's knowledge it is. To be clear, FCG is now under different ownership and the depreciation expert used in that prior case is not retained for this matter.

FPSC EXH NO. 40
ADMITTED

INTERROGATORY NO. 15(a-b), cont.

b. The average retirement rates in the 2025 Depreciation Study were not calculated by dividing the original cost of Retirements which retired in the year 2024 by the original cost of the Plant in Service at the end of 2024. The calculation is dividing the cost of retirements retiring during the year by the end of year plant in service plus retirements (exposures). This calculation of an average retirement rate has been approved in previous FPSC depreciation studies, such as Docket No. 20220067-GU and Docket No. 20230079-EI. Yes, an original cost which was recorded 55 years ago would in general be a lower dollar amount than the dollar amount of an original cost of a similar item recorded 10.5 years ago.

Respondent: Patricia Lee and Bety Maitre

INTERROGATORY NO. 16(a-b)

16. **Depreciation**. In response to Staff's First Set of Data Requests, No. 7(d) regarding the net salvage factor of Account 3801, Plastic Services, the FCG response included the following: "The retirement rates of less than 1 % are not reliable for net salvage projections."

a. Please cite which page in *Public Utility Depreciation Practices*, published by NARUC (1996) says that retirement rates (or retirement ratios) of less than 1 % are not reliable.

b. For any citation from *Public Utility Depreciation Practices* provided in response to part (a), provide the citation from *Public Utility Depreciation Practices,* which shows the citation was referring to retirement rates (or retirement ratios) in which the original costs in the denominator were from a **different** average time period than the original costs in the numerator.

Company Response:

a. There is no specific cite from *Public Utility Depreciation Practices*. The statement is based on Ms. Lee's vast depreciation experience. Stated simply, when retirement rates average less the 1%, the results of statistical analysis are considered meaningless for service life or net salvage projections, because there is not a reasonable sample size upon which to conduct the statistical analysis. Additionally, this approach for life and salvage determinations has been accepted by the Commission in previous depreciation studies, such as Docket No. 20220067-GU and Docket No. 20230079-EI.

b. FCG objects to this request as exceeding the scope of discovery in that it is argumentative and seeks information that is not solely in the possession of FCG and therefore equally and publicly available to OPC. With that said, FCG's response is: N/A

Respondent: Patricia Lee and Bety Maitre

FCG's Resp to OPC's 3rd ROGs Nos.17-19

(with attachments)

INTERROGATORY NO. 17(a-c)

INTERROGATORIES

17. Depreciation. With regard to Items 1- 4, please answer (a) – (c):

1. In the "FCG Response Attachment A -Revised FCG Depreciation Study Workpapers", "Sch G 2021" shows that $569,979 was the amount of Additions in Account 3780, Measuring and Regulating Equip. - General, in the year 2021. (This same $569,979 amount is also shown on page 63 of Schedule G (page 70 in the PDF) of Attachment A, 2025 Depreciation Study of Florida City Gas).

2. The data in the file "OPC ROG-2-8a Service Life Data (37976850.1)" shows that in the years 2021-2024, no investments have retired in the 2021 vintage in Account 3780, Measuring and Regulating Equip. – General, and there are no transfers in this vintage and account.

3. As a result of the numbers discussed in items 1 and 2 above, the Book Cost investment balance in Account 3780, Measuring and Regulating Equip. – General should be $569,979 in the year 2021 vintage at the end of 2024. ($569,979 - $0 = $569,979).

4. However, in the FCG calculation of the "Average Age" of 3780, Measuring and Regulating Equip. – General , FCG used $31,663 as the claimed Book Cost at 1/1/2025, of the 2021 vintage, as shown on tab "Sch J" of "FCG Response Attachment A -Revised FCG Depreciation Study Workpapers".

   a. Please explain why FCG used $31,663 as the claimed Book Cost in the 2021 vintage at January1, 2025 for Account 3780, Measuring and Regulating Equip. – General when calculating "Average Age", when the FCG data from other sources shows that the Book Cost at that time was in excess of $500,000.

   b. Please reconcile the (1) $31,663 shown as the claimed Book Cost at January1, 2025 for Account 3780, Measuring and Regulating Equip. – General (as shown on tab "Sch J" of "FCG Response Attachment A -Revised FCG Depreciation Study Workpapers"), with (2) the $569,979 amount of Additions in 3780, Measuring and Regulating Equip. – General, in the year 2021 (as shown on "FCG Response Attachment A -Revised FCG Depreciation Study

FPSC EXH NO. 41
ADMITTED

Workpapers" "Sch G 2021") adjusted for the later retirements (if any) from the 2021 vintage.

c. If the response to part (b) claims there have been any retirements from the 2021 vintage in Account 3780, Measuring and Regulating Equip. – General, cite the line(s) in the file "OPC ROG-2-8a Service Life Data (37976850.1)" which shows any retirements in the years 2021-2024, in the 2021 vintage in 3780, Measuring and Regulating Equip. – General.

Company Response:

a) The difference between the two schedules for the book cost is timing. The data provided in response OPC ROG-2-8a Service Life Data reflects the information provided on PSL-2 workbook, Schedules G 202X for the years 2021 through 2024. The data for transaction years 2021 through November 2023 were provided by Florida Power and Light (FPL). The G schedules are summarized according to the ledger's posting date and ties to the Annual Status Reports submitted to the Commission. Schedule G's reported additions may include late charges and correcting entries for prior years.

Schedule J reflects investments by vintage regardless of posting date. The data source for Schedule J is FCG's PowerPlan Continuous Property Records (CPR) report, which was provided as response to OPC POD 2-11 Sch J - FCG Plant by Vintage. These records include the asset and retirement details by vintage that were provided by FPL during the acquisition of FCG by Chesapeake Utilities (CHPK) and CHPK's subsequent continuous property records through 2024. FCG believes its CPR records are the best option to provide the appropriate distribution of assets at 1/1/2025 to compute the average age calculation for its accounts.

FPSC EXH NO. 41
ADMITTED

INTERROGATORY NO. 17(a-c), cont.

b) See attachment OPC ROG 3-17 Acct 3780 for a reconciliation between Schedules G and J.

c) There have been no retirements from the vintage year 2021. See tab 3-17 Corrected SLD Entries of attachment OPC ROG 3-17 Acct 3780 for the revised service life data for transaction years 2021-2024.

Respondent: Pat Lee

INTERROGATORY NO. 18(a-c)

18. Depreciation. With regard to Items 1- 4, please answer (a) – (c):

1. In the "FCG Response Attachment A -Revised FCG Depreciation Study Workpapers", "Sch G 2021" shows that $5,565,780 was the amount of Additions in Account 3762, Steel Mains, in the year 2021. (This same $5,565,780 amount is also shown on page 63 of Schedule G (page 70 in the PDF) of Attachment A, 2025 Depreciation Study of Florida City Gas).

2. The data in the file "OPC ROG-2-8a Service Life Data (37976850.1)" shows that in the years 2021-2024, no investments have retired in the 2021 vintage in Account 3762, Steel Mains, and there are no transfers in this vintage and account.

3. As a result of the numbers discussed in items 1 and 2 above, the Book Cost investment balance in Account 3762, Steel Mains should be $5,565,780 in the year 2021 vintage, at the end of 2024 ($5,565,780 - $0 = $5,565,780).

4. However, in the FCG calculation of the "Average Age" of Account 3762, Steel Mains, FCG used $546,527 as the claimed Book Cost at 1/1/2025, as shown on tab "Sch J" of "FCG Response Attachment A -Revised FCG Depreciation Study Workpapers".

    a. Please explain why FCG used $546,527 as the claimed Book Cost of the 2021 vintage at 1/1/2025 for Account 3762, Steel Mains when calculating "Average Age", when the FCG data from other sources shows the Book Cost at that time was in excess of $5,000,000.
