

## PSC Participates in Alternative Fuel Vehicle Roadshow

Recognizing the benefits of reducing use and dependence on fossil fuels, in September, Florida's Public Service Commission (PSC) Chairman Ronald A. Brisé and Commissioner Eduardo Balbis participated in an alternative fuel vehicle (AFV) showcase events in Tallahassee and Jacksonville.

"Florida's diverse energy mix of coal, nuclear, gas, and other sources has benefited our citizens with lower energy prices, cleaner energy development, and job creation," said PSC Chairman Brisé. "Helping to raise public awareness and highlighting alternative fuel vehicles is a natural next step in our fuel diversification efforts that can further enhance these benefits."

On September 20, Balbis attended an alternative fuel vehicle event at the Lively Technical Center in Tallahassee and on September 21, Chairman Brise, participated in an event at the University of North Florida in Jacksonville.

The events featured cars, buses, and trucks powered by electricity, natural gas, propane, and biofuels. Presentations by manufacturers and power producers provided the benefits, costs, and infrastructure needed to make these transportation solutions a reality for consumers, industry, and government.

AFV Roadshow events occurred statewide from September 18–27.
