1. Switched Access Charges

Access charges are fees charged by local telephone companies to other telephone companies for the use of their local networks. These charges are not a government charge or tax. These charges pay for the portion of the local telephone company’s network that is used to complete a call. Calls that cross state boundaries are considered “interstate” and are regulated by the Federal Communications Commission (FCC). By comparison, calls that are originated and end within a state are “intrastate” calls. Intrastate rates are generally overseen by either state commissions or state legislatures. In Florida, these rates are not established by the Florida Public Service Commission (FPSC). Incumbent local exchange carriers are required to file these rates with the FPSC. Table 1 identifies these rates for Florida’s incumbent local exchange carriers.

In 2011, the FCC moved to adopt uniform regulation of all forms of access charges. The FCC’s order established a national transition to a “bill-and-keep” framework for all telecommunications traffic exchanged with local exchange companies. Under bill-and-keep, carriers look first to their subscribers to recover the costs of the network, then to explicit universal service support where necessary. The FCC’s Order requires carriers to transition their terminating access rates to zero over time. Table 1 compares intrastate access charges to interstate access charges.

Table 1
Comparison of Intrastate and Interstate Switched Access Charges

Company	Intrastate Rate	Interstate Rate
AT&T Florida	\$0.0133	\$0.0076
Embarq Florida, Inc. d/b/a CenturyLink	\$0.0269	\$0.0105
FairPoint (Floralala)	\$0.0884	\$0.0325

2. Intrastate Switched Access Charges

The underlying calculations for each of the intrastate rates found in Table 1 are provided in Tables 2-1 through 2-12 and represent intrastate switched access charges of incumbent carriers as of October 1, 2016. The recurring usage-sensitive switched access rate elements used for the recovery of local network costs are generally the same in both the federal and state jurisdictions. They consist of five major elements calculated to recover specific network costs and are delineated further through the designations “originating” and “terminating.” The components of the usage-sensitive switched access rates are as follows:

- Originating and Terminating Carrier Common Line – recovering a portion of the cost of the local loop (common line)
- Originating and Terminating Local Switching – recovering the cost of local switching at the local exchange carrier’s end office
- Originating and Terminating Switched Transport – recovering the cost of the network between the local exchange carrier’s end office and the point of presence (POP) of the second telecommunications company
- Originating and Terminating Tandem Switching – recovering the cost of the tandem switches that route the calls between the local exchange company's end office and the POP
- Originating and Terminating Tandem Switched Transport – recovering the cost of the network between the tandem switch and the second telecommunications company’s POP.

The application of the specific components depends upon the route the call takes for completion and is arranged by agreement between the carriers.

3. Interstate Switched Access Charges

The underlying calculations for each of the interstate rates found in Table 1 are provided in Tables 3-1 through 3-12 and represent interstate switched access charges of incumbent carriers as of October 1, 2016. The recurring usage-sensitive switched access rate elements used for the recovery of local network costs are generally the same in both the federal and state jurisdictions. They consist of five major elements calculated to recover specific network costs and are delineated further through the designations “originating” and “terminating.” The components of the usage-sensitive switched access rates are as follows:

- Originating and Terminating Carrier Common Line – recovering a portion of the cost of the local loop (common line)
- Originating and Terminating Local Switching – recovering the cost of local switching at the local exchange carrier’s end office
- Originating and Terminating Switched Transport – recovering the cost of the network between the local exchange carrier’s end office and the point of presence (POP) of the second telecommunications company
- Originating and Terminating Tandem Switching – recovering the cost of the tandem switches that route the calls between the local exchange company's end office and the POP
- Originating and Terminating Tandem Switched Transport – recovering the cost of the network between the tandem switch and the second telecommunications company’s POP.

The application of the specific components depends upon the route the call takes for completion and is arranged by agreement between the carriers.

4. Interstate Per-Line Charges

The FCC allows local telephone companies to bill customers for a portion of the costs of providing access and to recover their contributions to the federal universal service program. While the maximum allowable charges are set by the FCC, telephone companies are free to charge less or even nothing. Some assessments, such as the Subscriber Line Charge, the Access Recovery Charge, and the Presubscribed Interexchange Carrier Charge vary based on the nature of the customer (i.e., residential or business) and if it is the first line or an additional line to the same home or office. Table 4 shows the interstate per line charges related to access charges assessed on consumers and the federal universal service fund.

Table 4 also divides incumbent carriers into carriers that are members of the National Exchange Carrier Association (NECA) and those that are not (non-NECA). Carriers that are members of NECA tend to be smaller rural carriers. NECA is a non-profit organization established by the FCC to implement the necessary procedures of what and how access charges will be applied for interstate traffic. NECA files interstate access charges with the FCC, and after approval, pools interstate access collections from the local exchange carriers and distributes these revenues equitably to the members based on each one's contributions in terms of expenses and capital investment for interstate toll.

The Subscriber Line Charge (SLC) is an FCC approved charge billed by telephone companies to pay part of the cost of a phone line to residential and business customers. It is designed to help local phone companies recover the cost of providing "local loops" which refers to outside telephone wires, underground conduit, telephone poles, and other equipment and facilities connecting customers to the telephone network. Neither the FCC nor any other government agency receives the SLC.

The Access Recovery Charge (ARC) was recently adopted as part of reforms to the intercarrier compensation regimes. This transitional recovery charge is intended to mitigate the effect of reduced intercarrier revenues and facilitate continued investment in broadband. The FCC caps the maximum price that a company may set as its ARC. Beginning July 1, 2012, the FCC allowed incumbent local exchange carriers to assess the ARC. The FCC will allow incumbent local exchange carriers to bill the ARC separately, or to combine the ARC with the SLC for purposes of billing. The ARC is not charged to Lifeline customers.

The Presubscribed Interexchange Carrier Charge (PICC, pronounced "pixie") is a flat fee long distance companies pay to the local telephone company when consumers pre-subscribe a telephone line to their long distance service. The charge is designed to compensate the local telephone companies for the costs associated with providing "local loop" service. Long distance companies can choose to pass this charge on to their customers. If a customer (residential or business) has not selected a long distance company for its telephone lines, the local telephone company may bill for the PICC. On July 1, 2000, the FCC ruled that long distance companies no longer will have to pay this fee to local companies for residential lines, or single line businesses. The charge continues for multiple line businesses.

The Universal Service Charge is a federal fee charged to all companies that provide telephone service and is collected to fund the federal universal service program. This program provides support to help make phone service affordable and available to consumers with low income; those living in high cost areas, schools, libraries, and rural health care providers. While the fee is assessed on telecommunications carriers (based on their interstate and international revenues), carriers can pass these fees on to their customers. Because some assessment fees, such as the SLC and ARC, are interstate in nature, consumers may be assessed a Universal Service Charge on these fees. As a result, consumers that have not made any interstate or international calls may be assessed a Universal Service Charge. The percent assessed on revenues changes from quarter to quarter depending on the growth in the program or changes in the assessment base (i.e., interstate and international revenues). The FCC assessment factor reported in this report is for the fourth quarter of 2016 and is established by the FCC.

For a residential primary line, the Universal Service Charge would be the sum of the residential primary line SLC and the residential line ARC multiplied by the Assessment Factor. This represents the maximum amount a carrier can charge associated with those line items. If a residential customer also makes interstate or international calls, the Universal Service Charge would increase based on the charges associated with those calls times the assessment factor. The method of calculating the Universal Service Charge is the same for a single business line, except it uses the single line business SLC and the single line business ARC instead of the residential line SLC and the residential line ARC.

**Table 4
Interstate Per-Line Charges**

		Subscriber Line Charge (SLC)			
		Residential Primary Line	Residential Non-primary Line	Business Single Line	Business Multiline
NON-NECA	<i>AT&T</i>	\$6.50	\$6.60	\$6.50	\$6.60
	<i>CenturyLink</i>	\$6.17	\$6.17	\$6.17	\$6.92
	<i>Frontier Comm. of the South</i>	\$6.50	\$6.60	\$6.50	\$9.20
	<i>Frontier Florida/Verizon</i>	\$6.50	\$7.00	\$6.50	\$8.48

	<i>TDS/Quincy</i>	\$6.50	\$6.50	\$6.50	\$9.20

¹ All FairPoint Divisions

The Subscriber Line Charge (SLC) is billed by LECs to end users.

The Presubscribed Interexchange Carrier Charge (PICC) is billed by LECs to IXC. IXCs, however, may choose to pass this charge on to end users.

The Universal Service Charge is assessed on interstate and international revenues. Because line items such as the SLC and ARC are considered interstate in nature, consumers can have a USF line charge even if they have not made any long distance or international calls.

5. Message Toll Service

Message Toll Service (MTS) is a term for long distance service that can vary by distance and time of day. The mileage provided in Table 5 is the distance between two rate centers. Rate centers are points within an exchange area used as the basis for the determination of toll rates. The monthly charge for many leased circuits is billed on the basis of “airline mileage” between the two points.

Historically, the rates increased the further the call traveled. The distance sensitive rates have decreased over time. Table 5 provides the basic residential rates for each incumbent local exchange carrier according to mileage bands for their IntraLATA Daytime Rates. For some companies, these rates continue to increase with distance. These rates shown in Table 5 are generally higher than those provided in bundles the company may offer.
