1. Switched Access Charges

Access charges are fees charged by local telephone companies to other telephone companies for use of their local networks. These charges are not a government charge or tax. These charges pay for the portion of the local telephone carrier’s network that is used to complete a call. Calls that cross state boundaries are considered “interstate,” while calls that originate and end within a state are “intrastate” calls. Incumbent local exchange carriers (ILECs) are required to file rates with the Florida Public Service Commission (FPSC) pursuant to Section 364.163, Florida Statutes. The FPSC uses the data to generate this report, which provides a centralized, ready reference for ILEC access charges.

Table 1
Comparison of Intrastate and Interstate Switched Access Charges* **

Company	Intrastate Rate	Interstate Rate
AT&T Florida	\$0.0057	\$0.0054
Embarq Florida, Inc. d/b/a CenturyLink	\$0.0252	\$0.0086
Consolidated Communications of Florida Company (Floral)	\$0.0688	\$0.0196
Consolidated Communications of Florida Company (Perry)	\$0.0635	\$0.0196
Consolidated Communications of Florida Company (St. Joseph)	\$0.0681	\$0.0196

Frontier Florida LLC	\$0.0527	\$0.0077
ITS Telecommunications Systems, LLC	\$0.0572	\$0.0723
Northeast Florida Telephone Company d/b/a NEFCOM	\$0.0496	\$0.0407
Smart City Telecom	\$0.0637	\$0.0070
Quincy Telephone Company d/b/a TDS Telecom	\$0.0563	\$0.0062
Windstream Florida, LLC	\$0.0549	\$0.0082

*per minute

** does not include 8YY or toll free charges

Source: Company response to staff data request.

2. Intrastate Switched Access Charges

The underlying calculations for each of the intrastate rates found in Table 1 are provided in Tables 2-1 through 2-12 and represent intrastate switched access charges of ILECs as of October 1, 2022. The recurring usage-sensitive switched access rate elements used for the recovery of local network costs are generally the same in both the federal and state jurisdictions. They consist of five major elements calculated to recover specific network costs and are delineated further through the designations “originating” and “terminating.” The components of the usage-sensitive switched access rates are as follows:

- Carrier Common Line – recovering a portion of the originating and terminating cost of the local loop (common line)
- Switched Transport – recovering the originating and terminating cost of the network between the local exchange carrier’s end office and the point of presence of the second telecommunications carrier, including the cost of tandem transport and switching
- Interconnection Charge – recovering a portion of the originating and terminating cost of interconnection between local exchange carrier’s end office and the network
- Information Surcharge – recovering a portion of the originating and terminating cost of local switching access minutes
- End Office – recovering the originating and terminating cost of local switching at the local exchange carrier’s end office

The application of the specific components depends upon the route the call takes for completion and is arranged by agreement between the carriers.

3. Interstate Switched Access Charges

The underlying calculations for each of the interstate rates found in Table 1 are provided in Tables 3-1 through 3-12 and represent interstate switched access charges of ILECs as of October 1, 2022. The recurring usage-sensitive switched access rate elements used for the recovery of local network costs are generally the same in both the federal and state jurisdictions. They consist of five major elements calculated to recover specific network costs and are delineated further through the designations “originating” and “terminating.” The components of the usage-sensitive switched access rates are as follows:

- Carrier Common Line – recovering a portion of the originating and terminating cost of the local loop (common line)
- Switched Transport – recovering the originating and terminating cost of the network between the local exchange carrier’s end office and the point of presence of the second telecommunications carrier, including the cost of tandem transport and switching
- Interconnection Charge – recovering a portion of the originating and terminating cost of interconnection between local exchange carrier’s end office and the network
- Information Surcharge – recovering a portion of the originating and terminating cost of local switching access minutes
- End Office – recovering the originating and terminating cost of local switching at the local exchange carrier’s end office

The application of the specific components depends upon the route the call takes for completion and is arranged by agreement between the carriers.

4. Interstate Per-Line Charges

The FCC allows local telephone companies to bill customers for a portion of the costs of providing access and to recover their contributions to the federal Universal Service program. While the maximum allowable charges are set by the FCC, telephone companies are free to charge less or even nothing. Some assessments, such as the Subscriber Line Charge, the Access Recovery Charge, and the Presubscribed Interexchange Carrier Charge vary based on the nature of the customer (i.e., residential or business) and if it is the first line or an additional line to the same home or office. Table 4 shows the interstate per line charges for each carrier related to access charges assessed on consumers and the federal Universal Service Fund.

Table 4 also divides ILECs into carriers that are members of the National Exchange Carrier Association (NECA) and those that are not (non-NECA). Carriers that are members of NECA tend to be smaller rural carriers. NECA is a non-profit organization established by the FCC to implement the necessary procedures for what and how access charges will be applied to interstate traffic. NECA files interstate access charges with the FCC and, after approval, pools interstate access collections from the member carriers and distributes these revenues equitably based on each member's interstate access expenses and capital investments.

The Subscriber Line Charge (SLC, pronounced "slick") is an FCC approved charge billed by telephone companies to pay part of the cost of a phone line to residential and business customers. It is designed to help local phone companies recover the cost of providing "local loops," which includes outside telephone wires, underground conduit, telephone poles, and other equipment and facilities connecting customers to the telephone network. Neither the FCC nor any other government agency receives the SLC.

The Access Recovery Charge (ARC) was adopted as part of reforms to intercarrier compensation regimes beginning in 2012. This transitional recovery charge is intended to mitigate the effect of reduced intercarrier revenues and facilitate continued investment in broadband by allowing for partial recovery of revenues lost by reductions in access rates during the transition to bill-and-keep intercarrier compensation. The FCC caps the maximum price that a carrier may set as its ARC. The FCC also allows ILECs to bill the ARC separately, or to combine the ARC with the SLC for purposes of billing. The ARC is not charged to Lifeline customers.

The Presubscribed Interexchange Carrier Charge (PICC, pronounced "pixie") is a flat fee long distance carriers pay to the local telephone carrier when consumers pre-subscribe a telephone line to their long distance service. The charge is designed to compensate local telephone carriers for costs associated with providing "local loop" service. Long distance carriers may choose to pass this charge on to their customers. If the customer (residential or business) has not selected a long distance carrier for its telephone lines, the local telephone carrier may bill the customer for the PICC. Prior to 2000, the PICC applied to residential and single/multiline business lines. Intercarrier compensation reforms adopted by the FCC on July 1, 2000, eliminated the PICC for all end users except multiline business customers.

The Universal Service Charge is a federal fee charged to all companies that provide telephone service and is collected to fund the federal Universal Service program. This program provides support to help make phone service affordable and available to consumers with low income, those living in high cost areas, schools, libraries, and rural health care providers. While the fee is assessed on telecommunications carriers (based on their interstate and international revenues), carriers can pass these fees on to their customers. Because some assessment fees, such as the SLC and ARC, are interstate in nature, consumers may be assessed a Universal Service Charge on these fees. As a result, consumers that have not made any interstate or international calls may be assessed a Universal Service Charge. The percent assessed on revenues changes from quarter to quarter depending on the growth in the program or changes in the assessment base (i.e., interstate and international revenues). The FCC assessment factor reflected in this report is for the fourth quarter of 2022 and is established by the FCC.

For a residential primary line, the Universal Service Charge would be the sum of the residential primary line SLC and the residential line ARC multiplied by the Assessment Factor. This represents the maximum amount a carrier can charge associated with those line items. If a residential customer also makes interstate or international calls, the Universal Service Charge would increase based on the charges associated with those calls multiplied by the assessment factor. The method of calculating the Universal Service Charge is the same for a single business line, except it uses the single line business SLC and the single line business ARC instead of the residential line SLC and the residential line ARC.

5. Message Toll Service

Message Toll Service is a term for long distance service that can vary by distance and time of day. The mileage provided in Table 5 is the distance between two rate centers. Rate centers are points within an exchange area used as the basis for the determination of toll rates. The monthly charge for many leased circuits is billed on the basis of “airline mileage” between the two points.

Historically, the rates increased the further the call traveled, but distance sensitive rates have decreased over time. Table 5 provides the basic residential rates for each ILEC according to mileage bands for their IntraLATA Daytime Rates.¹ For some companies, these rates continue to increase with distance. The rates shown in Table 5 are generally higher than those provided in bundles the carrier may offer.

¹ The term “LATA” is an abbreviation of “Local Access and Transport Area,” which is a geographic area serviced by one or more local exchange carriers. The term “IntraLATA” refers to activity that occurs within a LATA.
