NOTE: GRU utilizes dual register meters for our net metering configurations. Register 001 of the meter records the amount of energy flowing into the premise from GRU Distribution System and represents the amount of energy customer purchases when solar panels aren't producing enough energy for the premise. Register 002 records the amount of EXCESS energy flowing out from the premise onto GRU Distribution System. Register 002 represents the excess energy produced by the solar panels above the demand needed to supply the premise and shows as a separate line item credit on the monthly billing statement (customer receives approx retail rate for the kWh credits). We have a separate meter which is NOT billed that only records the full output of the solar panels and we call this the REC meter, however, we have only started installing separate REC meters in the new installations beginning Summer 2009 & beyond. Therefore, based on our current metering configurations, the amount of energy delivered (consumed) by the customer directly attributable from the solar panels cannot be isolated. This distinct energy is offset and netted against the total energy purchased and recorded as a net amount on Register 001 of the meter and billed to the customers.
