COMMISSION
CLERK

Mr. Thomas Ballinger, Director
Division of Engineering
Florida Public Service Commission
2540 Shumard Oak Boulevard
Tallahassee FL 32399-0868

Dear Mr. Ballinger:

Attached are an original and seven copies of Gulf Power Company's Annual Distribution Service Reliability Report as required by Rule 25-6.0455, along with annual storm hardening initiatives as required in Order No. PSC-06-0781-PAA-EI and the status report on Gulf's Storm Hardening Plan as required by Paragraph 7 of the "Process to Engage Third party Attachers" Stipulated Agreement dated September 26, 2007 in Docket No.: 070299-EI.

Sincerely,

A handwritten signature in cursive script that reads "Robert L. McGee, Jr.".

Robert L. McGee, Jr.
Regulatory and Pricing Manager

1.0 Status Report of Implementation of Storm Hardening Plan

This section is intended to fulfill the requirement for filing a status report of Gulf Power Company's Storm Hardening Plan. A "Stipulation and Agreement" was signed between Gulf Power Company (Gulf) and the Florida Cable Telecommunications Association (FCTA) on November 9, 2010.

On May 1, 2010, Gulf filed its 2010-2012 Storm Hardening Plan update as required by Rule 25-6.0342 FAC. Docket No. 100265-EI was opened to address the updates. On June 10, 2010, the Florida Public Service Commission (FPSC) Staff conducted a workshop to better understand Gulf's plan. In addition to the workshop, the FPSC Staff sent data requests to obtain clarification and additional information. On November 15, 2010 the Florida Public Service Commission approved Gulf's 2010-2012 Storm Hardening Plan.

1.1 2012 Storm Hardening Activities

The following storm hardening activities were initiated and/or completed in the field during 2012:

Distribution

Gulf continued to hold meetings in order to enhance communications between Gulf's field personnel and third party attachers. Meeting notifications were sent to the following third party attachers: AT&T, Cox Communications Gulf Coast, MediaCom, Southern Light, Comcast Joint Holdings, Springfield Cablevision, Knology, CenturyLink, Brighthouse Networks, Century Tel/Madison River Communication, Escambia County School Board, Valparaiso Broadband Communications, Walton County, Level 3 Communications, Community Cable Corporation, Peoples First Community Bank, Verizon, Fairpoint Communications and Windstream KDL. Gulf's permit administrator, ICON Consulting, participated in these meetings as well. Ongoing communication between these parties is vital to the success of Gulf's storm hardening initiatives since detailed information on actual or proposed attachments is required to complete computer modeling of poles to determine the type and class of pole required.

During these meetings, Gulf reviewed (1) planned major projects (both Company and customer driven) related to the scope of work and the location; (2) questions related to designing to Grade B standards; (3) pole inspection program (Osmost); (4) operational issues; (5) the pole count project (6) Smart Grid Investment Grant (SGIG) construction

projects; (7) DOT projects and permitting issues; and (8) the 2010 – 2012 Storm Hardening Plan.

Organizational charts and maps identifying Gulf field personnel responsibility areas were provided to the third party attachers. All participants had the opportunity to ask questions and to clarify any issues. The 2012 meetings were held during the first and third quarters of the year. Attendees at the meetings held on February 29th in Panama City and March 2nd in Pensacola included representation from:

- Gulf field personnel, special project engineers, technical services engineers, and their respective supervision and management
- AT&T
- Mediacom
- Cox Communications Gulf Coast
- Southern Light
- ICON consulting
- Century Link
- Fairpoint Communications
- Davey Resource Group

Attendees at the meetings held on September 26th in Panama City and September 28th in Pensacola included representation from:

- Gulf field personnel, special project engineers, technical services engineers, and their respective supervision and management
- Century Link
- AT&T
- ICON Consulting
- Cox Communications Gulf Coast
- Southern Light
- Walton County
- Knology
- Comcast
- Brighthouse Networks
- Mediacom
- Escambia County Schools

Prior to the 2012 hurricane season, Gulf, SouthernLINC, and AT&T representatives held telephone updates to discuss their respective storm plans in the event of a major event. Since February 11, 2008, Gulf has assigned a liaison to AT&T during storm events and this past year, a liaison was also assigned to Century Link. Conversations related to storm planning have already occurred in 2013 thus continuing a smooth

and timely flow of information that indicates when Gulf has neared completion of restoration efforts in a particular area so that others can then begin their own restoration work.

Gulf has completed all distribution projects contained in its 2010 – 2012 Storm Hardening Plan.

Distribution

- Critical infrastructure and major thoroughfares.
- Underground Network Improvements.
- Conversion of 4kV Distribution Feeders.
- Automated Overhead Faulted Circuit Indicators.
- Distribution Supervisory Control and Data Acquisition (DSCADA).

Transmission

- All critical lines were aerially inspected.
- Four separate aerial patrols of the total system were completed.
- Comprehensive walking/climbing and ground line inspections as part of the six-year inspection program were completed.

2.0 Wood Pole Inspection Program

2.1 Wood Pole Inspection Description

Gulf's 2012 Wood Pole Inspection Program was designed to comply with FPSC Order No. PSC-06-0144-PAA-EI (eight-year inspection cycle) and FPSC Order No. PSC-07-0078-PAA-EU (allowed certain deviations regarding CCA poles less than 15 years in age and poles surrounded by concrete and asphalt). In 2012, Gulf completed the sixth year of the eight-year inspection cycle, utilizing its existing wood pole inspection matrix. This matrix is based on pole age, treatment type and condition, and allows the selective excavation and boring of newer poles.

2.2 2012 Accomplishments

In 2012, a total of 1,709 poles were inspected with a rejection rate of 2.80%. This number of inspections reflects the fact that Gulf was ahead of schedule at the end of 2011 and only 1,709 poles required inspection in 2012 to remain on schedule to achieve an eight-year cycle. See Appendix 2, titled "Annual Wood Pole Inspection Report" for details.

2.3 Projected 2013 Goals

Gulf is on schedule to achieve an eight-year pole inspection cycle in 2014. The 2013 inspections have already begun and are scheduled for completion by mid-year. Gulf is also on schedule in changing out poles identified as rejects from prior inspections. All poles identified as rejects are being changed out or reinforced and poles that are changed out are being upgraded to Grade B construction standards. At the end of 2012, Gulf had changed out all but 322 poles identified as rejects from prior inspections. These poles will be changed out in 2013.

3.0 Vegetation Management Programs

3.1 Distribution Vegetation Management (VM) Plan Overview

In 2012, the Company continued the Vegetation Management (VM) program approved in PSC 07-1022-FOF-EI. The combination of the three year cycle on main line feeders, four year cycle on laterals, and an annual cycle of inspections and correction on main line feeders continued to improve system reliability performance.

3.2 Transmission Vegetation Management Plan Overview

Vegetation hazard removals continued to be the focus of the Company's 2012 Transmission VM programs. Detailed ground patrols were performed on the Company's transmission ROW corridors in an effort to identify vegetation conditions requiring correction. All vegetation conditions identified by the 2012 patrols were corrected through vegetation removal or pruning activities. In 2012, Gulf was in full compliance with NERC Standard FAC 003-1.

3.3 Supplemental VM Programs

Gulf continues to use the **Distribution Lock-Out Report (DLOR)** which is a tracking process developed by the Company to document and track distribution feeder lock-outs. This program continued to be an effective VM tool throughout 2012. The data collected during field evaluations by our Company engineers, foresters, and arborists helped identify the root causes of feeder breaker lock-outs. This enabled us to modify and improve our VM management practices employed on Gulf's distribution

system. The use of DLOR will continue to be a valued element of our future VM programs.

“Tree Gulf” was continued throughout 2012 as a tool to proactively report and address problem vegetation conditions that could pose a future threat to system reliability. “Tree Gulf” streamlined the internal reporting process and electronically produced work-orders directly to Forestry Services to inspect and correct potential vegetation related risks. This tool enabled every Company employee, including non-field personnel, the ability to easily report vegetation concerns through phone, radio, or email communication.

3.4 Company’s Overall Vegetation Management Summary

During 2012, Gulf pruned the remaining 240 miles (1/3 of its 719 total feeder miles) to complete its scheduled three-year cycle, which began in 2010. Additionally, the other 2/3 (479 miles) of main line primary were inspected and any vegetation conditions found to be out of specification were pruned or removed. Gulf pruned 281 miles in 2010 and 259 miles in 2011.

During 2012, Gulf pruned 857 miles of its total 5,170 miles of lateral lines in the 3rd year of its four-year cycle, which began in 2010. Gulf pruned 1,060 miles in 2010 and 1,530 miles in 2011.

In comparing 2011 to 2012, system performance continued to improve. Outages per mile and customer interruptions per mile all improved in 2012.

3.5 2012 Distribution Performance Metrics (System Wide)

1. Distribution VM Reliability

Outages & Interruptions	FEEDER			LATERAL		
	Unadjusted	Adjusted	Diff.	Unadjusted	Adjusted	Diff.
A) Number of Outages	12	11	1	1,164	940	224
B) Customer Interruptions	13,456	12,933	523	49,314	37,824	11,490
C) Outages Per Mile	0.017	0.015	0.002	0.23	0.18	0.05
D) CI Per Mile	18.71	17.99	0.72	9.54	7.32	2.22
E) Customer Minutes of Interruption	1,578,923	1,561,141	17,782	7,676,265	6,071,240	1,605,025

2. Distribution Performance

VM Miles Cleared and Contractor Cost	Plan (mi)	Actual (mi)	Plan (\$)	Actual (\$)
A) MATS Mainline Annual Trim Schedule (3 Year Cycle)	240	240	\$408,000	\$455,642
B) MICS Mainline Inspect & Correct Schedule (1 Year Cycle)	479	479	\$90,630	\$106,552
C) SALT Scheduled Annual Lateral Trim (4 Year Cycle)	1,294	857	\$3,165,059	\$3,141,416
D) TICKETS (T) Hot Spot Tickets Completed with Contract Cost	Feeder (T) 0	Lateral (T) 4,120	Feeder (\$) \$0	Lateral (\$) \$452,065

3. Total Distribution Vegetation Cost

VM Planned Vs Actual Program Costs	Plan (\$)	Actual (\$)
A) VM Contractor Costs (MATS, MICS, SALT, and TICKETS)	\$4,197,544	\$4,155,675
B) VM Other Program Costs (Internal Labor and Miscellaneous)	\$32,456	\$134,540
C) Total Distribution Vegetation Cost	\$4,230,000	\$4,290,215

4.0 Joint Use Pole Attachment Audits

Gulf performs its joint use inventory audits, covering the overhead distribution system as required by FPSC Order No. PSC-06-0781-PAA-EI every five years. The most recent audit was completed on December 15, 2011. The next audit is scheduled for 2016.

4.1 Activity and Costs Incurred for 2012 and 2013 Projections

No additional costs are anticipated in 2013.

4.2 Joint Use Attachment Audits – Distribution Poles

(A) Number of company owned distribution poles (See Note 1)	200,776
(B) Number of company distribution poles leased: 8 Telecomm attachers on Gulf's poles (See Note 1)	136,870
(C) Number of owned distribution pole attachments: 7 CATV, numerous Government and other 3 rd party attachers on Gulf's poles (See Note 1)	159,963
(D) Number of leased distribution pole attachments: Foreign poles Gulf Power is attached to (See Note 1)	57,566
(E) Number of authorized attachments: Sum of all attachments to Gulf Power Company poles (See Note 1)	296,833
(F) Number of unauthorized attachments:	0
(G) Number of apparent NESC violations involving electric infrastructure	Note 2
(H) Number of apparent NESC violations involving 3 rd party facilities	Note 2

NOTES:

Note 1: Data has been updated based on the 2012 year end GIS data.

Note 2: Gulf Power does not collect this type of data as part of the joint use process. When Gulf becomes or is made aware of NESC violations, Gulf takes corrective measures.

5.0 Six-Year Inspection Cycle for Transmission Structures

5.1 Activity and Costs Incurred for 2012 and 2013 Projections

In 2004, Gulf participated with Georgia Power Company, Alabama Power Company, and Mississippi Power Company to develop and adopt the Southern Company Transmission Line Inspection Standards. Gulf contracts ground line inspections and uses a combination of Company employees and contractors to perform comprehensive walking and aerial inspections. Gulf Power Company's transmission inspection program is based on two alternating twelve-year cycles which result in a structure being inspected at least every six years. As part of the Transmission Line Inspection Standards, Gulf performs at least 4 routine aerial patrols each year.

In 2012, Gulf Power spent a total of \$43,075 on a combination of comprehensive walking and ground line treatments for metal poles and towers. In addition to this amount, Gulf spent \$155,721 on a combination of comprehensive walking inspections and ground line treatments for wood and concrete poles. These amounts are shown in Section 5.3 and 5.4 respectively. All inspections are on schedule to meet the six-year timeline. Additionally, Gulf performed 4 aerial inspections of its system with an actual cost of \$7,631.

5.2 Transmission Circuit, Substation and Other Equipment Inspections

Gulf completed 33 transmission substation inspections during 2012 as planned. The costs associated with inspections are not tracked separately from general maintenance expenses. Gulf transmission does not inspect by circuit.

5.3 Transmission Metal Pole and Tower Inspections

	2012 Activity		2012 Costs		2013	
	Goal	Actual	Budget	Actual	Goal	Budget
(A) Total Transmission Metal Poles and Towers Inspections ^(Note 1)	-	2,510	-	-	-	-
(B) Transmission Metal Poles and Towers	362	362	\$43,341	\$43,075	514	\$56,699
(C) Percent of transmission Metal Poles and Tower inspections completed	-	14%	-	-	-	-

NOTES:

Note 1: Several structures that were previously classified as multi-pole steel were re-classified as towers. This resulted in a net decrease in the number of metal poles and towers.

5.4 Transmission Pole Inspections

	2012 Activity		2012 Costs		2013	
	Goal	Actual	Budget	Actual	Goal	Budget
(A) Total number of Transmission Poles	-	14,326	-	-	-	-
(B) Number of transmission poles inspected.	2,609	2,618	\$296,710	\$155,721	2,490	\$146,000
(C) Number of transmission poles passing inspection.	-	2,547	-	-	-	-
(D) Number of transmission poles failing strength test (overloaded)	-	N/A	-	-	-	-
(E) Number of transmission poles failing inspection (other reasons).	-	71	-	-	-	-
(F) Number of transmission poles corrected (strength failure)	-	0	-	-	-	-
(G) Number of transmission poles corrected (other reasons)	-	272	-	-	-	-
(H) Total transmission poles replaced	-	272	-	-	N.A. (Note 1)	-

NOTES:

Note 1: Gulf uses current year inspections and prior years' inspections in determining the poles to be replaced in the current year. Therefore a goal for poles to be replaced in 2013 is not applicable.

6.0 Storm Hardening Activities for Transmission Structures

6.1 Activity and Costs Incurred for 2012 and 2013 Projections

Gulf Power Company identified two priority hardening activities for transmission structures: installation of guys on H-frame structures and replacement of wooden cross arms with steel cross arms. These activities will add additional strength capacity to the existing structures.

Gulf Power Company believes these two activities are the best alternatives for existing transmission assets most at risk. The installation of guys on H-frame structures was completed in 2012. The replacement of wooden cross arms with steel cross arms is proceeding on schedule to meet the 2017 completion date.

6.2 Hardening of Existing Transmission Structures (Poles)

	2012 Activity		2012 Costs		2013	
	Goal	Actual	Budget	Actual	Goal	Budget
(A) Transmission structures hardened	850	857	(Note 1)	(Note 1)	200	(Note 1)
(B) Percent Transmission structures hardening completed	-	101%	-	-	-	-

NOTES:

Note 1: Actual dollars spent are incorporated into a budget for infrastructure replacement projects and not separated by hardening activity.

7.0 Distribution Substations

7.1 Five-Year Patterns/Trends in Reliability Performance of Distribution Substations

Gulf reviews each substation related outage, and actions are taken to reduce the possibility of a similar-caused outage occurring in the future. The review of data for the past five years does not show any trends or patterns in items affecting distribution substation reliability.

7.2 Distribution Substation Reliability Tracking

Each abnormal substation related outage is reviewed. Analyses are performed and corrections are made to reduce the potential for future outages as a result of a similar system disturbance.

7.3 *Distribution Substation Reliability Problem Identification Process*

In order to promote substation reliability, inspections are performed. These inspections include visual checks on all equipment including breakers, regulators, transformers and battery banks. The substation is verified to ensure that proper signs are installed. The fence is checked for security and proper grounding. Security lights are checked and weed problems are noted. Any abnormal condition is documented in Gulf Power's existing Standard Transmission Operation and Maintenance Program (STOMP) and scheduled for repair.

Along with station inspections, equipment maintenance is performed on a regular cycle to maintain reliability. A detailed battery inspection is completed every six months with impedance tests performed every four years. Preventative diagnostics on Oil Breakers are performed every two years. Preventative diagnostics on 12kV vacuum breakers are performed every four years. Preventative diagnostics on regulators are performed every year. A dissolved gas analysis is performed on transformers every year and power factor testing is performed every six years.

7.4 *Distribution Substation Inspections during Normal Operations*

Gulf inspected all of its distribution substations at least once during 2012.

8.0 Geographic Information System (GIS)

8.1 *Activity and Costs Incurred for 2012 and 2013 Projections*

Gulf completed its distribution facilities mapping transition to its new Distribution Geographic Information System (DistGIS) in 2009.

The Transmission system has been completely captured in the Transmission GIS database. Transmission GIS continues to be updated with any additions and changes as the associated work orders for maintenance, system improvements, and new business are completed.

8.2 *Distribution Overhead Data Input*

All overhead distribution equipment has been captured in Gulf's DistGIS

including conductors, regulators, capacitors and switches, protective devices such as reclosers, sectionalizers, fuses and transformers. The DistGIS continues to be updated with any additions and changes as the associated work orders for maintenance, system improvements, and new business are completed. This on-going process provides Gulf sufficient facility information to use with collected forensic data to assess performance of its overhead system in the event of a major storm.

8.3 *Distribution Underground Data Input*

All underground distribution equipment has been captured in Gulf's DistGIS including conductors, regulators, capacitors and switches, protective devices such as reclosers, sectionalizers, fuses and transformers. The DistGIS continues to be updated with any additions and changes as the associated work orders for maintenance, system improvements, and new business are completed. This on-going process provides Gulf sufficient facility information to use with collected forensic data to assess performance of its underground system in the event of a major storm.

9.0 Post Storm Data Collection and Forensic Analysis

9.1 *Activity and Costs Incurred for 2012 and 2013 Projections*

Distribution:

While Gulf did feel some effects from Hurricane Isaac in August 2012, the event was not significant enough to bring the forensic collection team on the system. The contractor did conduct a refresher training course during 2012 to ensure the inspectors stay current on the procedures for forensic collection.

Gulf feels confident that it is ready to perform post-storm forensics if needed in the 2013 storm season.

Transmission:

Gulf Power Company's Transmission department's forensics team will be led by the transmission engineering function. Utilizing an aerial patrol with a fixed wing aircraft, the team will capture an initial assessment of the level of damage to the transmission system. A follow-up aerial patrol utilizing helicopters will capture GPS coordinates for each failure and record the failures with the Transmission Line Inspection System (TLIS). When ground crews arrive on the scene, the construction inspector with the crew will be responsible for assessing all damage and making a determination as to the cause of the failure. Gulf's Transmission

Engineering department will review all findings of the field inspection and determine if additional information should be gathered.

Gulf Power's existing Common Transmission Data Base (CTDB) will be utilized to capture all forensic information. The TLIS tool will be used to track all facility failures and create work orders to associate those failures with the affected facilities. TLIS utilizes geographic mapping software to track the location of the facilities.

10.0 Outage Data Differentiating Between Overhead and Underground Systems

Gulf did experience outages and damage from several FPSC excludable storms in 2012. These storms, although excludable under the FPSC rules, did not produce major storm related data.

10.1 Activities and Costs Incurred in 2012 and 2013 Projections

As reported previously, Gulf expanded its record keeping and analysis of data associated with overhead and underground outages, some of which is included in Section 15.10.4 of this report. Gulf continued collecting the following data on outages as they occur:

- UG cable is:
 - direct buried
 - direct buried but cable injected
 - in conduit

- Pole type is:
 - concrete
 - wood

This data was collected as each outage occurred using the Company's Trouble Call Management System (TCMS). Data collected in 2012 is shown in the tables below. This data includes transmission, planned outages, and all exclusions. The costs of collecting this data were minimal as existing systems and processes were utilized.

Customers	System	N	CI	CMI	Duration	SAIDI	SAIFI	CAIDI	L-Bar
434,571	Overhead	16,405	776,864	69,797,736	1,788,746	160.61	1.788	90	109
434,571	URD - Direct Burial	658	17,398	2,712,833	126,172	6.24	0.040	156	192
434,571	URD - In Conduit	169	5,727	714,425	26,394	1.64	0.013	125	156
434,571	URD - Injected	3	95	4,873	301	0.01	0.000	51	100

11.0 Coordination with Local Governments

Gulf Power Company is committed to coordinating with local governments on major projects and storm preparedness. For all major projects, Gulf Power meets with governmental entities as appropriate to discuss the scope of the projects and coordinate activities involved with project implementation. Gulf Power also works very closely with the county Emergency Operation Centers (EOC) in its service area for storm preparedness and restoration activities as needed.

In 2007, Gulf initiated an ongoing survey with the four active EOCs in Northwest Florida to gauge the company's collaboration with the EOCs. In the surveys, the Directors for the Escambia County, Santa Rosa County, Okaloosa County, and Bay County EOCs are asked to gauge Gulf Power's participation level, responsiveness, presence in the EOC, and overall information exchange. Three surveys of this type have been conducted since 2007. In all cases, all four EOCs rated Gulf Power's coordination efforts as "Outstanding." The surveys show that Gulf Power values and actively pursues a positive and cooperative relationship with the leadership in every community served.

In addition, Gulf maintains year-round contact with city and county officials to ensure cooperation in planning, good communications and coordination of activities.

Gulf Power has hosted Community Leader Forums in the three geographic districts. Community, government, education and business leaders are invited to these half-day events where Gulf Power gives an update on the company's plans and activities and asks for input from the community. Working with the community leaders, two or three key community issues are identified and

brought to the forum for leaders to listen to each other and build consensus on how to address the issues.

Gulf Power hosts an annual economic symposium where relationships with these key officials are nurtured.

Gulf Power also has designated employees in every community whose job is to keep in regular contact with city, county and business leadership.

11.1 Ongoing Programs

Gulf Power Company has several employees with local government liaison responsibilities in Northwest Florida. District managers are located in Pensacola, Ft. Walton, and Panama City. Local managers, who report to the district managers, are located in Milton, Crestview, Niceville, and Chipley. These employees interact with city and county personnel on a daily/weekly basis regarding numerous issues, including emergency preparedness as needed. These employees are also actively involved in specific government/business committees that focus on emergency preparedness needs in Northwest Florida. Examples of those include:

- Member of BRACE (Be Ready Alliance for Coordinating for Emergencies). BRACE is an Escambia County organization unique to Florida but part of a federal government directive that encourages communities to develop more effective preparedness programs for various types of disasters.
- Member of Okaloosa County Emergency Management Committee. This Committee is a coordinated effort between government and business to address emergency preparedness issues on a monthly basis.

Gulf Power Line Clearance Specialists and Forestry Services Technicians also communicate routinely with members of the community, government officials, and military leaders concerning area vegetation management projects and other issues such as: (1) new customer and Company construction projects; (2) utility right-of-way maintenance; (3) major initial clearing projects (i.e. road additions and re-sizing projects, new distribution feeders, water and sewer projects, military projects and missions, etc.); and (4) storm preparation and recovery activities. Routine communications range from office and field visits to phone and radio conversations.

In addition to numerous planning meetings with the EOCs, Gulf Power personnel also participated in the following hurricane activities with government entities during 2012:

- Escambia County EOC
 - Hurricane Drill
 - All EOC Activations
 - EOC Representative Training
- Santa Rosa Co. EOC
 - Hurricane Drill
 - All EOC Activations
 - EOC Representative Training
- Okaloosa County EOC
 - Hurricane Drill
 - EOC Representative Training
 - Storm response training in North and South Okaloosa County where we met with local disaster preparedness officials to go over storm readiness and response plans and to get their feedback.
- Bay County EOC
 - All EOC Activations
 - First responder recognition
- Florida Division of Emergency Management
 - Geomagnetic Storm Exercise (Region 1 workshop and statewide exercise).

11.2 Storm Preparation

Thirteen employees are assigned to the county EOCs throughout Northwest Florida. Each of those employees received federal certification under the National Incident Management System (NIMS) through FEMA. The EOC Representatives assist city and county agencies and officials during emergencies that warrant activation of the county EOCs. Gulf Power provides 24-hour coverage throughout the duration of the EOC activation. All actions are based on the Company's central Emergency Operations Plan.

Gulf Power's Emergency Operations Plan includes ongoing communications, pre-storm communications, and post-storm communications supplied by the Corporate Communications Department. Company News Releases are delivered to the County EOCs at least twice daily during storm restoration events to keep local government agencies and officials apprised of the latest Company restoration activities.

11.3 Storm Restoration

Gulf Power maintains an active communication link with the activated EOCs for storm events. Assigned Gulf Power representatives coordinated pre-storm activities with the County EOCs to establish emergency communication links

with local and state officials, the media, and restoration crews for all 2012 EOC activations.

Gulf Power strives to restore emergency services as quickly as possible. In addition, Gulf Power has completed storm-hardened pilot projects for feeder lines that serve critical infrastructures such as hospitals, water treatment facilities, and fuel depots to minimize outages of these facilities during major storm events. Gulf's service area was affected by Hurricane Isaac in August 2012. Restoration of the resulting outages was handled by the local district offices working with the Company Emergency Management Center (CEMC) staff to allocate resources as needed. It was therefore not necessary to fully activate Gulf's CEMC. Personnel were assigned to the local EOC's to facilitate communications.

12.0 Collaborative Research

As a member of the Public Utility Research Center (PURC), Gulf participates in the research activities for Storm Hardening as described by PURC management in Appendix 4.

13.0 Disaster Preparedness and Recovery Plan

Gulf's 2012 Disaster Preparedness and Recovery Plan had no major revisions from what was submitted in the Company's March 1, 2010 annual filing. A copy can be provided upon request.

13.1 Activity and Costs Incurred for 2012 and 2013 Projections

Gulf continues to provide annual refresher training (instructor lead and computer based) in the area of storm preparedness for various storm roles at minimal cost.

13.2 Disaster Recovery Plan Activity

Gulf's 2013 Storm Procedures Manual is currently being revised and reviewed by management. Any revisions will be returned and incorporated in the Manual by June 1, 2013. Storm assignments and training schedules are being finalized with plans for training to be completed prior to hurricane season.

13.3 Hurricane Drill

A mock hurricane drill was conducted on May 1, 2012, at Gulf's Corporate Office. The purpose of this drill was to raise awareness and continue a culture of preparedness both at work and at home. All participants rehearsed departmental readiness plans in response to a natural disaster. Discussions focused on:

- The importance of a drill as it related to the preparedness cycle of (1) updating plans and procedures (2) organizing, training, and equipping personnel (3) conducting exercises to test our thought processes and plans and to identify and correct any gaps and (4) evaluating and improving processes
- The importance of employees preparing their homes and family both prior to and after landfall
- Safety precautions both before, during, and after a storm at home and at work
- Lessons learned from off system restoration efforts
- Worst case scenarios
- The importance of internal and external communications
- The drill scenario called for a tornado event similar to the April 2011 Tuscaloosa occurrence. Unlike a hurricane, advance notice was hours rather than days. Participants tested their responses and the quality of existing plans on issues related to employee availability and notification to impact.

Gulf Power Company's next hurricane drill is scheduled for May 1, 2013.

14.0 Storm Season Ready Status

Storm Recovery Plan

Gulf uses the strategy described in its Storm Recovery Plan to respond to any natural disaster that may occur in our service area. The plan has previously proven to be very effective in recovering from multiple storms that have impacted Gulf and its customers. As part of its annual operations, Gulf has developed and refined its planning and preparations for the possibility of a natural disaster in the Florida panhandle. This planning is updated annually to build on what works well and to improve in areas that do not work as well as intended. In these updates, Gulf strives for continuous improvement by building on experiences from recovery efforts within northwest Florida as well as from lessons learned while assisting other utilities that have experienced natural disasters.

Gulf's plan has been encapsulated within a detailed and proprietary Storm Recovery Plan procedure manual as an element of its Natural Disaster Preparedness and Recovery program. The manual will follow the guidelines and philosophy set forth in the Storm Recovery Plan.

The restoration procedure establishes a plan of action to be utilized for the operation and restoration of generation, transmission, and distribution facilities during major disasters. Such disasters include hurricanes, tornadoes, and storms that could cause widespread outages to Gulf's customers.

The overall objective is to restore electric service to Gulf's customers as quickly as possible while protecting the safety of everyone involved.

The company acquires support from a number of resources including but not limited to the Southeastern Electric Exchange (SEE) Mutual Assistance Group and Southern Company for distribution, logistics and the Transmission Emergency Restoration Plan.

In the logistics and support areas, contracts are negotiated and confirmed with vendors for services such as food, lodging, materials, transportation, fuel and other support functions. Staging sites are secured, and if needed, agreements are negotiated and signed. Gulf's Supply Chain Management department ensures that materials on hand, along with available supplies from the material vendors, are sufficient to meet the anticipated demands of the storm season.

15.0 2012 Reliability Performance

15.1 Overall Performance

Gulf's 2012 Adjusted System Average Interruption Duration Index (SAIDI) is reported as 113 minutes, which is a slight increase of 2 minutes over 2011 results. The Adjusted System Average Interruption Frequency Index (SAIFI) decreased from 1.25 in 2011 to 1.16 interruptions. The Customer Average Interruption Index (CAIDI) increased to 98 minutes compared to the 89 minutes in 2011. Momentary Interruptions that Gulf's customers experienced decreased to 4.15 momentary interruptions in 2012 compared to 5.50 momentary interruptions in 2011. In 2012 the percent of customers experiencing more than 5 interruptions decreased to 1.11 percent compared to 1.87 percent in 2011. Also, while certain indices show an increase compared to 2012, Gulf logged 0 reliability related customer complaints in 2012 as seen in the FPSC Complaint Activity Tracking System.

The increase in SAIDI, CAIDI, and LBAR is primarily due to a non-excludable severe thunderstorm event on July 6th and 7th which resulted in 15 SAIDI minutes and .06 interruptions. Without this event Gulf's SAIDI would be 98 minutes, CAIDI would be 89.32 minutes and LBAR would be 116.69 minutes. See event characteristics below:

Non Excludable Severe Thunderstorm Event: July 6th-7th, 2012

- N = 316
- CI = 24,699
- CMI = 6,399,232
- SAIDI = 15
- SAIFI = 0.06
- CAIDI = 259

Gulf's top five causes of outages are animal, deterioration, lightning, trees, and unknown. Of the top five outage causes, unknown was the only outage cause which showed a decrease from 2011.

Outages due to animal activity increased 19% in 2012 driven by the large number of grey squirrels in Gulf's service area. The population of squirrels is affected by nut bearing trees (high in Gulf's service territory), food availability (2012's bumper crop), seasonal weather (a warm winter promoted higher activity), frequency of hurricanes (or current lack thereof), and other factors. These factors and other indicators point to squirrel activity being significantly higher than in 2011.

In 2012, thunderstorm activity increased 20% which contributed to an increase in tree and lightning outages by 2% and 23%, respectively, and this 20% increase also included a severe thunderstorm event that Gulf experienced in July 2012. Additionally in 2012, thunderstorm activity was a source of a 15% increase in deterioration outages experienced.

Gulf had several distribution weather exclusions for 2012. These are listed in section 15.7.

In 2012, Gulf continued to seek improvements in the company's distribution reliability through continued focus on "root" causes and added distribution automation.

See Appendix 1 for 2012 actual data and adjusted data.

15.2 Data Tracking Level

Gulf continues to collect outage data down to the customer meter level using the Trouble Call Management System (TCMS).

15.3 Critical Review of Detailed Reliability Data

System Level

In 2012, Gulf was impacted by several storm events which did meet the FPSC exclusion criteria. The main non-excludable event occurred on July 6th - 7th. As mentioned earlier, without this event Gulf's 2012 system SAIDI, CAIDI, and LBAR would have equaled or been lower than 2011 indices results as seen in the following table.

2011 vs. 2012 without July 2012 Severe Thunderstorm						
DATE	2011	2012	2011	2012	2011	2012
DISTRICT	SAIDI	SAIDI	CAIDI	CAIDI	LBAR	LBAR
CENTRAL	89.90	97.03	82.81	87.38		
EASTERN	110.29	88.22	84.27	94.63		
WESTERN	123.49	104.66	94.95	88.08		
SYSTEM	111.46	98.48	89.35	89.32	117.25	116.69

District Level

The July storm is the driver behind the Western district SAIDI and CAIDI increase for 2012. The Central district was impacted by the July storm as well as other storms in 2012. As a result of the increased storm and squirrel activity in the Central district, SAIDI increased by 7.19 minutes for animal outages, 5.73 minutes for unknown outages, 5.09 minutes for wind/rain outages, and 2.25 minutes for deterioration outages.

Number of Outages

Gulf's adjusted system outages increased 14% which was predominately driven by animal related outages and the increase in weather related events. The major increases in 2012 compared to 2011, are 572 animal outages, 291 deterioration outages, 348 lightning outages, and 107 wind/rain outages.

The July storm accounts for 203 of the 348 lightning outages and 6 SAIDI minutes and 69 tree outages and 5 SAIDI minutes. The number of outages for animal, deterioration, lightning, trees and wind/rain outages all show an increase, but SAIDI for these outages did not increase equally except for animal outages as seen in the table below.

Outages Compared to SAIDI						
Year	2011	2012		2011	2012	
	N	N	% Inc.	SAIDI	SAIDI	% Inc.
Animal	3013	3535	17%	6.78	8.9	31%
Deterioration	1928	2219	15%	19.62	19.63	0%
Lightning	1527	1875	23%	28.17	30.57	9%
Trees	1174	1195	2%	18.09	17.89	-1%
Wind/Rain	75	82	9%	2.27	4.26	88%

The number of animal outages has risen since the hurricanes of 2005 for the reasons described above. The majority of the animal outages are not recurring at the same devices. Gulf has continued to resolve this issue by installing animal protection where the outages occur and on new installations or when performing maintenance work. The animal outages are isolated events that mainly occur at the transformer level and Gulf is confident that the animal protection being installed will ultimately reduce the number outages caused by animals in the future.

3 Percent Feeder List

In 2012 Gulf did not have any feeders on the adjusted 3% feeder list from 2011. Gulf did have two feeders to reoccur within the last five years. One of the re-occurring feeders decreased from 6 outages in 2008 to 3 outages in 2012. The other re-occurring feeders had 3 outages in 2008 and 3 outages in 2012, with different outage causes from 2008 compared to 2012. Also, both feeders show decreased LBAR and CAIDI in 2012 compared to 2008 as seen in the table below.

2012 Adjusted 3% Feeder List Analysis				
Year	2008	2012	2008	2012
Feeder	7752	7752	7902	7902
N	6	3	3	3
L-Bar	124	73	36	14
CAIDI	124	57	44	14

Planned Outages

Gulf Power has again recorded more Planned Outages in 2012 than in previous years. Since the implementation of AMI, the AMI meter reports an outage at the time of the outage thus helping to capture these types of outages more consistently. The implementation across Gulf's system is now complete.

15.4 Identification and Selection of Detailed Reliability Data

The identification and selection of detailed reliability data continues to be a part of Gulf's TCMS process. Gulf's outage data collection captures information down to the customer meter level. As a result, Gulf can review data and the resulting reliability indices at the system level and by its three districts – Western, Central, and Eastern.

15.5 Generation Events – Adjustments

There were no generation events excluded from distribution reliability reporting in 2012.

15.6 Transmission Events – Adjustments

See Appendix 1 for transmission excluded events and associated outage causes and resolutions.

15.7 Extreme Weather – Adjustments

May 12-13 Tornado indices are as follows:

- N = 34
- CI = 3,048
- CMI = 336,724
- SAIDI = 0.78
- SAIFI = 0.007
- CAIDI = 110.47

June 9-10 EOC Opened due to severe flooding, indices as follows:

- N = 214
- CI = 23,621
- CMI = 2,486,475
- SAIDI = 5.72
- SAIFI = 0.054
- CAIDI = 105.27

Hurricane Isaac indices are as follows:

- N = 499
- CI = 40,999
- CMI = 5,592,746
- SAIDI = 12.87
- SAIFI = 0.094
- CAIDI = 136.41

December 20th Tornado indices are as follows:

- N = 15
- CI = 104
- CMI = 6,385
- SAIDI = 0.02
- SAIFI = 0.0002
- CAIDI = 61.39

Tropical Storm Debby indices are as follows:

- N = 92
- CI = 3,800
- CMI = 695,541
- SAIDI = 1.60
- SAIFI = 0.009
- CAIDI = 183.04

15.8 Other Distribution Adjustments

Please see Appendix 1 for Planned Outage excluded events.

15.9 Adjusted Reliability

15.9.1 Outage Event Causes

15.9.1.1 Five-Year Patterns

Below are trend tables showing the percentage of change in N and separate tables for SAIDI and SAIFI showing the percentage change for five years for the top ten outage causes.

Gulf is still in the process of analyzing the 2012 data to determine the need for any specific improvement activities beyond current programs and storm hardening initiatives which are underway.

15.9.1.2 Identification and Selection/Process Improvements

Gulf continues to focus its process improvement efforts on the system wide top ten outage causes through its existing programs and the new storm hardening efforts.

15.9.1.3 2012 Activities and Budget Allowances

In general, it is not practical to provide an itemized list of all activities that Gulf has included in its budget that are related to distribution reliability. Gulf's budget and accounting systems do not separately categorize and track capital expenditures or O & M expenses on the basis that they are related specifically to distribution reliability. Virtually all distribution functional capital projects and O & M expenses have been or will be undertaken as part of Gulf's commitment to provide customers with reliable and high quality electric service.

Gulf's Vegetation Management Program is an exception to the above. The activities and budgets associated with this program are provided in Section 3.0.

15.9.2 Three Percent Feeder List

15.9.2.1 Five-Year Patterns

Gulf had two feeders in the Actual report, and zero feeders in the adjusted report which were listed in last year's report.

The initial review of the reports showed that in all cases, the associated feeder problems were corrected at the same time of the outage. Additional reviews of the feeders will be conducted to determine if there are any specific improvements that can be performed to avoid having these feeders becoming repeats.

15.9.2.2 Identification and Selection/Process Improvements

Gulf continues to focus its process improvement efforts on the system wide top ten outage causes through its existing programs and the new storm hardening efforts.

15.9.2.3 2012 Activities and Budget Allowances

Please see the response to Section 15.9.1.3 for 2012 activities and budget allowances.

15.9.3 Regional Reliability Indices

15.9.3.1 Five-Year Patterns

Please see tables given in Section 15.9.1.1.

15.9.3.2 Identification and Selection/Process Improvements

Gulf continues to focus its process improvement efforts on the system wide top ten outage causes through its existing programs and the new storm hardening efforts.

15.9.3.3 2012 Activities and Budget Allowances

Please see the response to 15.9.1.3 for 2012 Activities and Budget allowances.

15.10 Overhead – Underground Reliability

15.10.1 Five-Year Patterns

NOTE: % Change is from one year to the next.

15.10.2 Identification and Selection/Process Improvements

Gulf continues to focus its process improvement efforts on the top ten outage causes system wide through its existing programs and the new storm hardening efforts.

15.10.3 2011 Activities and Budget Allowances

Please see Section 10.0.

15.10.4 Overhead (OH) and Underground (UG) Metrics

Please see Appendix 3 for specific feeder data for Gulf's overhead and underground lines.

The tables below represent reliability metrics for Gulf's overhead and underground system for 2012.

SYSTEM	REGION	Miles	Customers	N	Duration	GMI	CI
Overhead	CENTRAL	1,156	59,837	2,539	233,658	11,317,281	122,927

	SYSTEM	26.04	0.163	0.01	200.40	25.40	159.75

A review of the above data continues to reinforce observations made in Gulf's March 1, 2012 report.

There are several difficulties with comparing overhead outage statistics and underground outage statistics. The first is trying to ensure a true "apples to apples" comparison. This is very difficult to do given that historically the construction standard for Gulf's system has been overhead and as a result is approximately three times that of Gulf's underground system. The main difficulty is that the comparison suffers from problems of scale. The growth of Gulf's underground system is driven by customer demand based on aesthetic reasons. This results in the construction of underground subdivisions, commercial developments and conversion of overhead lines that are spread across Gulf's distribution system, in neighborhoods and near businesses. Over time the effect of this growth pattern on the distribution system results in the development of an overhead backbone serving "pockets" of underground distribution facilities.

A review of the data in the tables above continues to bring out the same important points.

First, Gulf has less than one-fourth of its system installed as underground. This means that overhead is over three times as exposed to outage-causing events and hence should experience more outages than underground, which it does. The result of dividing the SAIDI by miles of OH or by miles of UG indicates that both overhead and underground are comparable when you compare their SAIDI on a per mile basis as shown in the bottom chart.

Second, comparing the L-Bar of overhead and underground shows that underground outages last nearly twice as long as overhead outages. This continues to support the long held assertion that underground outages require more time to locate the problem and restore power than overhead outages.

Third, comparing the calculation of C/N for overhead and underground which gives the average number of customers affected by an outage indicates that underground outages typically affect fewer customers than an overhead outage, in fact, about half as many. This supports the observation of an overhead backbone serving "pockets" of underground. Thus the data available to Gulf for underground outages, at this time, continues to be limited to mostly small-scale outages, whereas Gulf's overhead outage data includes both small-scale and large-scale outages.

Fourth, comparing the CAIDI calculation for overhead and underground shows underground has a CAIDI value that is about 2 times that of overhead's, which continues to be consistent with Gulf's previous observations that underground outages have longer durations and fewer customers affected.

As discussed in last year's Reliability Report, the problem of scale is raised in attempting to answer the question, "Would Gulf Power be more or less reliable if their entire system was underground?" Gulf's underground is currently located in isolated "pockets" served from an overhead backbone. This limits Gulf's underground outage data to mostly small-scale outages, which, in turn, limits the number of customers that can be affected by any single underground outage. This places an upper limit on underground's SAIDI. If that limitation were to be removed by creating a system with an underground backbone, the analysis of L-Bar and CAIDI predicts that Gulf's reliability could degrade significantly simply due to the extended duration of each outage that occurs. In addition, Gulf's experience after major storms has shown that there is a higher failure rate for underground facilities

that may have been subjected to high water due to a major storm. In summary, without taking into consideration the recognized high cost of underground, continued analysis of available overhead and underground metrics at this time does not support using underground as a storm hardening option. It will be re-evaluated each year, as more data is accumulated, and technology evolves.

Gulf's installation of underground distribution facilities continues to outpace overhead due to customer demand based on aesthetic reasons.

15.11 Reliability Related Customer Complaints

15.11.1 Five-Year Patterns

Gulf Power management reviews a monthly report which supplies data on FPSC complaints and inquiries. Gulf Power's complaint activity as reflected in the FPSC Consumer Activity Report has remained at very low levels.

The graph below, based on the FPSC Consumer Activity Report, is provided to illustrate Gulf Power's customer complaint trend. The numbers represent Service complaints only and are from the FPSC Complaint Activity Tracking System. Gulf's logged complaints for 2012 decreased to 0.

Customer Service Complaint History

15.11.2 Correlation of Reliability Related Customer Complaints to Indices

Gulf Power has not determined a correlation of reliability related customer complaints to indices. Management continues to review complaints as they occur to determine if there are any deficiencies and if so, takes action to correct them.

15.11.3 Identification and Selection/Process Improvements

Due to Gulf's very low FPSC Consumer Activity Report complaints and no apparent correlation of reliability-related customer complaints to outage indices, Gulf has not implemented any programs to identify and select systemic actions to improve reliability based on customer complaints. Gulf will continue to review complaints as they occur to determine if there are any deficiencies and will take the needed action to correct them.

APPENDIX 2

Gulf Power Company Annual Wood Pole Inspection Report (Reporting Year 2012)

a	b	c	d	e	f	g	h	i	j	k	l	m
Total # of Wooden Poles in the Company Inventory	# of Pole Inspections Planned this Annual Inspection	# of Poles Inspected this Annual Inspection	# of Poles Failing Inspection this Annual Inspection	Pole Failure Rate (%) this Annual Inspection	# of Poles Designated for Replacement this Annual Inspection	Total # of Poles Replaced this Annual Inspection	# of Poles Requiring Minor Follow-up this Annual Inspection	# of Poles Overloaded this Annual Inspection	Method(s) V = Visual E = Excavation P = Prod S = Sound B = Bore R = Resistograph	# of Pole Inspections Planned for Next Annual Inspection Cycle	Total # of Poles Inspected (Cumulative) in the 8-Year Cycle To Date	% of Poles Inspected (Cumulative) in the 8-Year Cycle To Date
208,171	32,000	1709 (Note 1)	48	2.80	45	657 (Note 2)	3		V, E, S, B	26,000	136,779	88%
If b – c > 0, provide explanation	Note 1: Gulf was ahead of schedule on inspection and the amount inspected was required to maintain the 8 year cycle.											
If d – g > 0, provide explanation	Note 2: Pole inspections were completed in 2011 / 2012 and remaining repairs have been scheduled for 2013.											
Description of selection criteria for inspections	Gulf is systematically moving across its system. Poles are selected for inspection on a geographical basis.

APPENDIX 4

Report on Collaborative Research for Hurricane Hardening

Provided by

The Public Utility Research Center
University of Florida

To the

Utility Sponsor Steering Committee

February 2013

I. Introduction

The Florida Public Service Commission (FPSC) issued Order No. PSC-06-00351-PAA-EI on April 25, 2006 (Order 06-0351) directing each investor-owned electric utility (IOU) to establish a plan that increases collaborative research to further the development of storm resilient electric utility infrastructure and technologies that reduce storm restoration costs and outages to customers. This order directed IOUs to solicit participation from municipal electric utilities and rural electric cooperatives in addition to available educational and research organizations. As a means of accomplishing this task, the IOUs joined with the municipal electric utilities and rural electric cooperatives in the state (collectively referred to as the Project Sponsors) to form a Steering Committee of representatives from each utility and entered into a Memorandum of Understanding (MOU) with the University of Florida's Public Utility Research Center (PURC).

PURC manages the work flow and communications, develops work plans, serves as a subject matter expert, conducts research, facilitates the hiring of experts, coordinates with research vendors, advises the Project Sponsors, and provides reports for Project activities. The collaborative research has focused on undergrounding, vegetation management, hurricane-wind speeds at granular levels, and improved materials for distribution facilities.

This report provides an update on the activities of the Steering Committee since the previous report dated February 2012.

II. Undergrounding

The collaborative research on undergrounding has been focused on understanding the existing research on the economics and effects of hardening strategies, including undergrounding, so that

APPENDIX 4

informed decisions can be made about undergrounding policies and specific undergrounding projects.

The collaborative has refined the computer model developed by Quanta Technologies and there has been a collective effort to learn more about the function and functionality of the computer code. PURC and the Project Sponsors have worked to fill information gaps for model inputs and significant efforts have been invested in the area of forensics data collection. Since the state has not been affected by any hurricanes since the database software was completed, there is currently no data. Therefore, future efforts to refine the undergrounding model will occur when such data becomes available.

In addition, PURC has worked with doctoral and master's candidates in the University of Florida Department of Civil and Coastal Engineering to assess some of the inter-relationships between wind speed and other environmental factors on utility equipment damage. PURC has also been contacted by engineering researchers at other universities with an interest in the model, though no additional relationships have been established. The researchers that contact PURC all cite the model as the only non-proprietary model of its kind.

The research discussed in last year's report on the relationship between wind speed and rainfall is still under review by the engineering press. Further results of this and related research can likely be used to further refine the model.

III. Wind Data Collection

The Project Sponsors entered into a wind monitoring agreement with WeatherFlow, Inc. Currently, WeatherFlow's Florida wind monitoring network includes 50 permanent wind monitoring stations around the coast of Florida. The wind, temperature, and barometric pressure data being collected at these stations has been made available to the Project Sponsors.

There have been no major impacts from hurricanes since the wind monitoring network was established. Once such an event does occur and wind data is captured, it is expected that forensic investigations of utilities' infrastructure failure will be conducted and overlaid with wind observations to correlate failure modes to wind speed and turbulence characteristics. Project Sponsors and PURC will analyze such data at that time.

IV. Public Outreach

In last year's report we discussed the impact of Hurricane Irene on greater interest in storm preparedness. PURC researchers discussed the collaborative effort in Florida with the engineering departments of the state regulators in Pennsylvania and Maryland. In addition, PURC researchers testified on the collaborative effort in a special session before the office of the Governor of Connecticut. While all of the regulators and policymakers showed great interest in the genesis of the collaborative effort, and the results of that effort, they have not, at this point, shown further interest in participating in the research effort. However, the impact of Hurricane Sandy has sparked interest in the research in the states of New York and New Jersey, and

APPENDIX 4

representatives of regulatory and consumer organizations in both states have contacted PURC regarding the research and Florida's collaborative effort.

In August, PURC Director of Energy Studies Ted Kury participated in a teleseminar for state utility regulators sponsored by the National Regulatory Research Institute. During the seminar, he joined other participants in discussing the costs and benefits of relocating power lines underground. He also discussed the state's response to the 2004-05 hurricane seasons and shared lessons from the collaborative experience. In March of 2013, the *Wall Street Journal* will be publishing a special section on pressing energy issues where Kury will be contributing an essay on the costs and benefits of undergrounding.

V. Conclusion

In response to the FPSC's Order 06-0351, IOUs, municipal electric utilities, and rural electric cooperatives joined together and retained PURC to coordinate research on electric infrastructure hardening. The steering committee has taken steps to extend the research collaboration MOU so that the industry will be in a position to focus its research efforts on undergrounding research, granular wind research and vegetation management when significant storm activity affects the state.

Appendix 5

Appendix 5

Cross Reference Index

Eight-Year Wooden Pole Inspection Programs

- ◆ Summary of the Inspection Program..... (Section 2.1)
- Year of Review Wooden Pole Inspection Summary**
 - ◆ Total poles..... (Appendix 2, Column a)
 - ◆ Poles Planned for inspection for the year of review..... (Appendix 2, Column b)
 - ◆ Poles Inspected for the year of review..... (Appendix 2, Column c)
 - ◆ Poles Failed Inspection for the year of review..... (Appendix 2, Column d)
 - Corrective action and how many poles were corrected..... (Appendix 2, Column g)
 - ◆ The number of years completed in the 8-year cycle..... (Section 2.1)
- Projected Next Year of Review Wooden Pole Inspection Summary**
 - ◆ Total Poles (should be the same as above)..... (Appendix 2, Column a)
 - ◆ Total Number of Wooden Poles Inspected for 2006 (beginning of 8 year cycle) to the year of review..... (Appendix 2, Column l)
 - ◆ Number of Wooden Poles Inspections planned for the next year of review..... (Appendix 2, Column k)
 - ◆ Years Remaining in the 8-year cycle after the next year of review..... (Section 2.3)

Ten Initiatives

- (1) **Three-Year Vegetation Management Cycle for Distribution Circuits**
 - ◆ Summary of the vegetation management plans for the companies' feeder and lateral circuits..... (Section 3.1)
 - Vegetation Clearing From Feeder Circuits**
 - ◆ 1st Year of 3-year Cycle..... (Section 3.4)
 - ◆ Total Feeder Miles..... (Section 3.4)
 - ◆ Miles Trimmed for each year of the cycle..... (Section 3.4)
 - ◆ Total Feeder Miles Trimmed..... (Section 3.4)
 - Vegetation Clearing From Lateral Circuits**
 - ◆ Number of years in cycle..... (Section 3.4)
 - ◆ 1st year of cycle..... (Section 3.4)
 - ◆ Total Lateral miles..... (Section 3.4)
 - ◆ Miles Trimmed for each year of the cycle..... (Section 3.4)
 - ◆ Total Lateral Miles Trimmed..... (Section 3.4)
- (2) **Audit of Joint Use Agreements**
 - ◆ Summary of the Joint Use Agreements for poles and a summary of the monitoring of the strength and loading requirements for those poles..... (Section 2.2, DCN 03686-10 in Docket No. 100265-EI)
- (3) **Six-Year Transmission Inspections**
 - ◆ Summary of the six-year transmission structures, substations, and all hardware associated with these facilities inspections..... (Section 5.0)
- (4) **Hardening of Existing Transmission Structures**
 - ◆ Summary of the Hardening of Existing Transmission Structures..... (Section 6.0)

Appendix 5 Cross Reference Index

- (5) **Transmission and Distribution Geographic Information System**
 - ◆ Summary of the company’s transmission and distribution geographic information system..... (Section 8.0)
- (6) **Post-Storm Data Collection and Forensic Analysis**
 - ◆ Summary of the company’s post-storm data collection and forensic analysis..... (Section 9.1)
- (7) **Collection of Detailed Outage Data Differentiating Between the Reliability Performance of Overhead and Underground Systems**
 - ◆ Summary of the collection of detailed outage data differentiating between the reliability performance of overhead and underground systems..... (Section 10.0)
- (8) **Increased Utility Coordination with Local Governments**
 - ◆ Summary of the utilities increased coordination with the Local Governments..... (Section 11.0)
- (9) **Collaborative Research on Effects of Hurricane Winds and Storm Surge**
 - ◆ Summary of the continuing collaborative research with PURC on the effects of hurricane winds and storm surge..... (Appendix 4)
- (10) **A Natural Disaster Preparedness and Recovery Program**
 - ◆ Summary of the company’s Natural Disaster Preparedness and Recovery Program..... (Section 13.0)

Reliability Performance

- ◆ Summary of the company’s overall reliability performance..... (Section 15.1)

Actual Distribution Service Reliability

- ◆ Provide Form PSC/ECR 102-1(a) (8/06) entitled “Causes of Outages Events – Actual”..... (Appendix 1, Page 3)
- ◆ Provide Form PSC/ECR 102-2(a) (8/06) entitled “Three Percent Feeder list – Actual”..... (Appendix 1, Page 4)
- ◆ Provide Form PSC/ECR 102-3(a) (8/06) entitled “System Reliability Indices – Actual”..... (Appendix 1, Page 1)
- ◆ Provide Actual Customer Minutes of Interruption (CMI) and Customer Interruptions (CI)..... (Appendix 1, Page 2)
- ◆ Provide Documented Exclusion (CMI and CI) for the follow:
 - Planned Outages..... (Appendix 1, Page 14 – 238)
 - Named Storm Outages..... (Section 15.7)
 - Tornadoes..... (Section 15.7)
 - Ice on Lines..... (Not Applicable)
 - Planned Load Management Event..... (Not Applicable)
 - Customer Request..... (Not Available)
 - Fires..... (Not Applicable)
 - Extreme Weather Event..... (Section 15.7)
 - Other Distribution..... (Section 15.7)
 - Other Transmission and Generation..... (Appendix 1, Page 9 – 13)

- ◆ Summary of the Documented Exclusion (CMI and CI) with dates of what happened.....
.....(Section 15.7)

Adjusted Distribution Service Reliability

- ◆ Provide Form PSC/ECR 102-1(b) (8/06) entitled “Causes of Outages Events – Adjusted”.....
..... (Appendix 1, Page 7)
- ◆ Provide Form PSC/ECR 102-2(b) (8/06) entitled “Three Percent Feeder list – Adjusted”
..... (Appendix 1, Page 8)
- ◆ Provide Form PSC/ECR 102-3(b) (8/06) entitled “System Reliability Indices – Adjusted”
..... (Appendix 1, Page 5)
- ◆ Summary of SAIDI explaining any improvements or declines, plus if a region has a pattern of
declining, explain what is being implementing to correct the problem.....
..... (Section 15.1 and 15.3)
- ◆ Summary of SAIFI explaining any improvements or declines, plus if a region has a pattern of
declining, explain what is being implementing to correct the problem.....
..... (Section 15.1 and 15.3)
- ◆ Summary of CAIDI explaining any improvements or declines, plus if a region has a pattern of
declining, explain what is being implementing to correct the problem.....
..... (Section 15.1 and 15.3)
- ◆ Summary of MAIFle explaining any improvements or declines, plus if a region has a pattern of
declining, explain what is being implementing to correct the problem... (Section 15.1 and 15.3)
- ◆ Summary of CEMIS explaining any improvements or declines, plus if a region has a pattern of
declining, explain what is being implementing to correct the problem... (Section 15.1 and 15.3)
- ◆ Summary of L-Bar explaining any improvements or declines, plus if a region has a pattern of
declining, explain what is being implementing to correct the problem.....
..... (Section 15.1 and 15.3)
- ◆ Summary of the Companies Three Percent Feeder Report, plus if a feeder has a pattern of being
on the list, explain what is being implementing to correct the problem..... (Section 15.3)
- ◆ Summary of the Top Ten Outage Cause, plus a cause has a pattern of being on the list, explain
what is being implementing to correct the problem.....
..... (Section 15.1, 15.3, 15.9 and Appendix 1, Page 7)
- ◆ Summary of the Company’s Reliability Related Complaints, plus the number complaints are
raising, explain what is being implementing to correct the problem.....
..... (Section 15.1 and 15.11)
