-VIA ELECTRONIC FILING-

March 1, 2018

Ms. Carlotta S. Stauffer
Florida Public Service Commission
2540 Shumard Oak Blvd.
Tallahassee, FL 32399-0850

**RE: Docket No.: 180000
Florida Power & Light Company's 2018 Status/Update Report on Storm
Hardening/Preparedness and Distribution Reliability**

Dear Ms. Stauffer:

Pursuant to Order No. PSC-06-0781-PAA-EI, I am enclosing for filing in the above docket Florida Power & Light Company's ("FPL") status report and update of its Storm Preparedness Initiatives, which was filed in FPSC Docket No. 20060197-EI on June 1, 2006. Consistent with Staff's request at its October 30, 2006 workshop, FPL has consolidated into the enclosed document the following additional information:

1. Wood Pole Inspection Report as required by Order No. PSC-06-0144-PAA-EI, issued in FPSC Docket No. 20060078-EI on February 27, 2006;
2. Distribution Reliability Report as required by Rule 25-6.0455, F.A.C.; and,
3. A discussion of FPL's 2017 results for storm hardening facilities.

If there are any questions regarding this transmittal, please contact me at (561)304-5170.

Sincerely,

/s/ Kevin I.C. Donaldson

FPL Emergency Management Plan Severe Storms Brief	

EXECUTIVE SUMMARY – FPL’s MARCH 1, 2018 FILING

In 2017, FPL achieved best-ever Transmission and Distribution (“T&D”) System performance results for the System Average Interruption Duration Index (“SAIDI”) and the Momentary Average Interruption Event Frequency Index (“MAIFIE”).

Additionally, FPL continued to invest in and take significant steps to strengthen and modernize its electric infrastructure and enhance its emergency response capabilities. Included in this ongoing work were pole inspections, system infrastructure hardening, vegetation management, as well as other storm preparedness and reliability initiatives.

In 2018, FPL plans to continue its efforts to strengthen and modernize its electric infrastructure and improve its excellent everyday reliability for customers.

This filing provides details about these efforts and is organized into two major sections: (1) Storm Preparedness/Infrastructure Hardening; and (2) Reliability. The first section concentrates on FPL’s efforts to strengthen its distribution and transmission systems and enhance storm response capabilities. Initiatives addressed in this section include: Pole Inspections; System Hardening; 10 Storm Preparedness Initiatives; and 2018 Storm Season Readiness. The second section of this report includes information about FPL’s service reliability, including 2017 results and 2018 plans for the T&D system.

The following are brief overviews of each of these two sections:

Section 1: STORM PREPAREDNESS/INFRASTRUCTURE HARDENING

Pole Inspections

Distribution – In 2017, consistent with its Florida Public Service Commission (FPSC) -approved plan, FPL continued with the execution of its second eight-year pole inspection cycle.

- In 2017, FPL inspected approximately 1/8 of its pole population and completed all remaining follow-up work resulting from the 2016 pole inspections.
- In 2018, FPL plans to complete inspections on approximately 1/8 of its pole population, as well as complete all remaining follow-up work resulting from the 2017 pole inspections.

Transmission – In 2017, FPL completed all transmission pole/structure inspections consistent with its FPSC-approved plan.

In 2017, FPL performed: ground level visual inspections on 100% of its transmission poles/structures; climbing or bucket truck inspections on approximately 1/6 of its wood poles/structures, and 1/10 of its concrete and steel poles/structures; and conducted storm and pre-construction mitigation patrols on all concrete and steel poles/structures. FPL also completed all follow-up work resulting from the 2016 inspections.

In 2018, FPL plans to conduct ground level visual inspections on 100% of its transmission poles/structures; perform climbing or bucket truck inspections on approximately 1/6 of its wood poles/structures, and 1/10 of its concrete and steel poles/structures; and complete all follow-up work identified from the 2017 inspections.

System Hardening

Distribution

Consistent with FPL's FPSC-approved 2016–2018 Electric Infrastructure Storm Hardening Plan (see Order PSC16-0560-AS-EI in Docket No. 160021-EI), FPL continued to implement its three-prong approach in 2017 by applying: (1) extreme wind loading criteria ("EWL") to critical infrastructure facilities ("CIF"); (2) incremental hardening, up to and including EWL, to "Community Project" feeders; and (3) construction design guidelines that require EWL for the design and construction of all new overhead facilities, major planned work and relocation projects. Additionally, FPL initiated its next phase of hardening, which addresses the remaining feeders in its system and targets current feeders that do not meet EWL criteria (referred to as "wind zone" hardening; and substations without any hardened feeders (referred to as "geographic" hardening).

- In 2017, FPL continued to work on prior years' CIF (e.g., hospitals, 911 centers) and community project feeders (e.g., police/fire stations, water treatment plants, grocery stores, gas stations and pharmacies); feeders that serve essential community needs. Additionally, FPL applied EWL on 16 "01" switches, 2 highway crossings, 134 "Wind Zone" and 13 "Geographic feeders". Also, FPL's Design Guidelines were applied to all new construction and other construction activities described above.
- As of 2/28/18, FPL has hardened 95% of all CIF (e.g., hospitals, 911 centers) feeders and community project (e.g., grocery stores, gas stations) feeders in its system. The remaining 5% of CIF and community project feeders are in various stages of construction (e.g. over 40% of the remaining feeders are between 75%-99% complete and another 30% are more than 50%-74% complete). The vast majority of these remaining projects are expected to be completed by June 2018, with the exception of a few projects that are delayed as a result of issues beyond FPL's control (e.g., pending municipal OH/UG conversions projects, FDOT roadway projects, permitting issues).

- FPL also continued to promote overhead-to-underground conversions in 2017. Three municipalities signed agreements under FPL's GAF tariff and moved forward with their projects. There were also 10 municipal requests for non-binding/order of magnitude estimates during 2017. Additionally, in June of 2017 FPL proposed, and in January of 2018 the Commission ultimately approved FPL's revisions to the calculation of an applicant's contribution in aid of construction (CIAC) in the Company's underground distribution conversion tariff. The new formula generally reduces the costs for a governmental entity to undertake an overhead to underground conversion of feeders and should facilitate the ability of more local governments to pursue this course of action.

Transmission

Storm hardening details for Transmission are provided in Storm Preparedness Initiative No. 4 (see below).

Storm Preparedness Initiatives

(1) Vegetation Trim Cycles – In 2017, FPL continued executing its three-year average cycle and mid-cycle programs for feeders and its six-year average trim cycle for laterals.

(2) Joint Use Audits – Approximately 20 percent of FPL's jointly used poles are audited annually through its joint use surveys. Additionally, joint use poles are inspected through FPL's pole inspection program. Survey and inspection results continue to show that through FPL's joint use processes and procedures, along with cooperation from joint pole owners and third-party attachers, FPL has properly identified and accounted for the joint use facilities on its system.

(3) Transmission Structure Inspection Cycle – In 2017, FPL performed ground level visual inspections on 100% of its transmission poles/structures. Additionally, FPL performed climbing or bucket truck inspections on approximately 1/6 of its wood transmission system poles/structures, and 1/10 of its other concrete and steel poles/structures and conducted storm and pre-construction mitigation patrols on all concrete and steel poles/structures.

(4) Hardening the Transmission System – In 2017, FPL continued executing its plan to replace all wood transmission structures in its system. At year-end 2017, 91% of FPL's total transmission structure population is steel or concrete.

(5) Distribution Geographic Information System ("GIS") – FPL completed its five originally approved key Distribution GIS improvement initiatives in 2011. These initiatives included developing a post-hurricane forensic analysis tool and the addition of poles, streetlights, joint use survey and hardening level data to the GIS.

Updates to the GIS continue as data is collected through inspection cycles and other normal daily work activities.

(6) Post-Storm Forensic Collection/Analysis – FPL has post-storm forensic data collection and analysis plans, systems and processes in place and available for use. During 2017, FPL collected forensic data and performed analyses on Hurricane Irma for distribution, transmission and substation. The collected data and analysis results indicate that: hardened feeders performed statistically better than non-hardened feeders; out of 3,562 poles identified for replacement during the restoration efforts, 26 (0.73%) were hardened distribution poles; automated feeder switches avoided over 546,000 outages and flood monitors prevented potential significant damage at two substations. The majority of damage identified resulted from tree conditions and flying debris.

(7) Overhead (“OH”) and Underground (“UG”) Storm Performance – FPL has plans, systems and processes in place to capture OH and UG storm performance.

Data collection and analysis was performed following the impacts of Hurricane Irma. Regarding the performance of the overhead infrastructure, during Hurricane Irma, approximately 84% of the hybrid feeders (i.e., a combination of overhead and underground facilities), 89% of the overhead feeders and 24% of the overhead laterals that were impacted by Hurricane Irma experienced an outage. For transmission, approximately 21% of the overhead transmission line sections that were impacted by Hurricane Irma experienced an outage.

The underground infrastructure performance during Hurricane Irma resulted in approximately 84% of the hybrid feeders, 30% of the underground feeders and 4% of the underground laterals, that were impacted by Hurricane Irma experienced an outage. For transmission, 0% of the transmission underground line sections that were impacted by Hurricane Irma experienced an outage.

(8) Increased Coordination with Local Governments – In 2017, FPL continued its efforts to improve local government coordination. Activities included: (1) meetings with county emergency operations managers to discuss critical infrastructure locations in each jurisdiction; (2) inviting federal and state emergency management personnel to participate in FPL’s annual company-wide storm preparedness dry run and; (3) FPL’s External Affairs (“EA”) managers made presentations to educate communities served by FPL on topics of interest including service reliability, energy conservation, storm readiness and power generation. These presentations help address the informational needs of local community-based organizations. EA managers provided over 1000 community presentations in 2017.

(9) Collaborative Research on Hurricanes/Storm Surge – Collaborative research efforts led by the Public Utility Research Center (“PURC”) continued and the third extension of the MOU (through 2018) was approved.

(10) Natural Disaster Preparedness/Recovery Plans – FPL’s Storm Emergency Plan identifies emergency conditions and the responsibilities and duties of the FPL emergency response organization for severe weather and fires. The plan covers the emergency organization, roles and responsibilities and FPL’s overall severe storm emergency processes. These processes describe the planning activities, restoration practices, public communications, and coordination with government, training, practice exercises and lessons-learned evaluation systems. The plan is reviewed annually and revised as necessary.

2018 Storm Season Readiness

FPL’s comprehensive storm plan focuses on readiness, restoration and recovery in order to respond safely and as quickly as possible in the event the electrical infrastructure is damaged by a storm. FPL is well-prepared for the 2018 storm season and continues to train and hone its storm preparedness and response capabilities.

In addition to the initiatives to strengthen its system and improve storm preparedness discussed previously, FPL will complete the following additional storm preparedness activities prior to the start of the 2018 storm season:

- Extensive storm restoration training based on employees’ storm roles and four Incident Management Team Workshops throughout our service area;
- A full scale staging site exercise in advance of the peak of storm season to assess readiness of processes;
- Annual company-wide hurricane dry run in early May;
- Management workshops throughout the storm season to keep focus on key storm restoration policies/processes;
- Plans for and review of mutual assistance agreements to ensure they are adequate and ready;
- Continue to focus on improving outage communications and estimated restoration times to customers;
- Clear vegetation from all feeder circuits serving critical infrastructure functions (e.g. CIF hospitals, 911 centers, special needs shelters, police and fire stations, etc.) prior to the peak of hurricane season; and
- Continue development and utilization of new technology to be utilized by storm damage assessors to improve damage assessment collection/analysis capabilities.
- Participate in industry conferences to share best practices across companies from the 2017 storm season.

Section 2: RELIABILITY

Total FPL System (Distribution and Transmission) – Overall reliability is best gauged by SAIDI, the most relevant and best overall reliability indicator because it encompasses two other standard industry performance metrics for reliability: SAIFI (“System Average Interruption Frequency Index”) and CAIDI (“Customer Average Interruption Duration Index”). In 2017, FPL continued to provide excellent overall reliability for its customers, achieving a best-ever total FPL T&D system adjusted SAIDI of 56.4 minutes (2016 – 57.9 minutes). Additionally, FPL achieved a best-ever FPL T&D system adjusted MAIFle (Momentary Average Interruption Frequency Index (events) of 4.9 momentary events (2016 – 6.4 momentary events).

Distribution – FPL’s 2017 overall adjusted distribution reliability results were: SAIDI, a best-ever 54.3 minutes (2016 – 55.8); SAIFI 0.90 interruptions per customer (2016 – 0.92 interruptions); CAIDI, 60.0 minutes (2016 – 60.7 minutes) and a best-ever adjusted MAIFle, 4.3 momentary events (2016 – 5.8 momentary events).

Transmission – In 2017, FPL’s Transmission/Substation adjusted reliability results were: SAIDI of 2.1 minutes (2016 – 2.2 minutes); SAIFI, 0.16 interruptions per customer (2016 – 0.20 interruptions); and MAIFle, 0.6 momentary events (2016 – 0.6 momentary events).

POLE INSPECTIONS

Summary – Pole Inspections

Distribution

In 2017, consistent with its FPSC-approved plan, FPL completed the fourth year of its second eight-year pole inspection cycle.

- In 2017, FPL inspected approximately 1/8 of its pole population, or 146,506 poles, including 123,279 wood poles, and completed all remaining follow-up work identified during the 2016 pole inspections.
- In 2018, FPL plans to complete inspections on approximately 1/8 of its pole population, as well as complete all remaining follow-up work identified during the 2017 pole inspections.

Transmission

In 2017, FPL completed all transmission pole/structure inspections consistent with its FPSC-approved plan.

- In 2017, FPL performed ground level visual inspections on 100% of its transmission poles/structures. Additionally, FPL performed climbing or bucket truck inspections on approximately 1/6 of its wood transmission system poles/structures, and 1/10 of its other concrete and steel poles/structures and conducted storm and pre-construction mitigation patrols on all concrete and steel poles/structures. Also, FPL completed all follow-up work identified from the 2016 inspections.
- In 2018, FPL plans to conduct ground level visual inspections on 100% of its transmission poles/structures. Additionally, FPL plans to perform climbing or bucket truck inspections on 1/6 of its wood poles/structures, and 1/10 of its other concrete and steel poles/structures and complete all follow-up work identified from the 2017 inspections.

Distribution

1. Description of the pole inspection program

FPL's eight-year inspection cycle for all distribution poles targets approximately 1/8 of the system annually; however, the actual number of poles inspected can vary somewhat from year to year. To ensure coverage throughout its service territory, FPL has established nine inspection zones, based on FPL's management areas and pole population, and annually performs pole inspections and necessary remediation in each of these zones.

FPL utilizes Osmose Utility Services ("Osmose"), an industry-leading pole inspection company, to perform the inspection of all distribution poles in its service territory. Osmose utilizes mobile computing technology to record inspection data and to calculate strength and loading. The loading calculation, span lengths, attachment heights and wire sizes are recorded in the mobile computer to determine whether the remaining pole strength capacity exceeds National Electrical Safety Code ("NESC") requirements. This data is then transferred to FPL's GIS. Pole locations inspected by Osmose are randomly audited by FPL to verify that inspections are completed and meet inspection standards.

Inspections include a visual inspection of all distribution poles from the ground-line to the top of the pole to identify visual defects (e.g., woodpecker holes, split tops, decayed tops, cracks, etc.). If, due to the severity of the defects, the poles are not suited for continued service, the poles are designated for replacement. With the exception of Chromium Copper Arsenate treated ("CCA") poles less than 16 years of age (modified in October 2014, see discussion below), if the pole passes the above-ground visual inspection, wood poles are excavated to a depth of 18" (where applicable), and sounded and bored to determine the internal condition of the pole. Poles encased in concrete or asphalt are not excavated but sounded and bored to determine their internal condition. Osmose developed/utilizes an inspection process for this condition called "Shell Boring". All suitable wood poles receive external and/or internal preservative treatment or, if not suitable, are replaced. Strength calculations are also performed on wood poles to determine compliance with NESC requirements.

CCA poles less than 16 years (modified in October 2014, see discussion below) of age are subject to a visual, sound and selective bore inspection, but not excavation. A bore inspection is performed if there is any decay indicated from the visual or sound inspection. To ensure that this exception will not compromise existing safety and storm hardening programs, FPL excavates a one percent sample of the CCA poles that would not normally qualify for full excavation.

In October 2014, the FPSC approved FPL's request to modify its pole inspection program by: (1) increasing the excavation exemption for CCA poles from less than 16 years old to less than 28 years old; and (2) exempting any pole from a loading

assessment, during the second eight-year cycle, that tested less than 80% of full load during FPL's initial 8-year cycle. FPL will continue to conduct a one percent sample of exempted CCA poles and will monitor/report on poles with a 70%-80% initial eight-year cycle load test result.

Current NESC guidelines, outlined by Table 261-1A Section 26 of the NESC, require that distribution poles meet a minimum of Grade C construction. Building to Grade C is the typical standard for the distribution utility industry. However, FPL's strength and loading calculations for its distribution poles and pole inspections are based on the NESC's Grade B construction standard, a higher standard, as outlined by Table 261-1A section 26 of the NESC.

2. 2017 Accomplishments

In 2017, FPL inspected approximately 1/8 of its distribution pole population (146,506 in total, including 123,279 wood poles) throughout its service territory.

Consistent with its Commission-approved exemption, FPL also fully excavated a one percent sample of the CCA poles that would not have been fully excavated under this exemption. From that sample, zero poles failed the excavation portion of the inspection. FPL also met its sample target on poles with a 70%-80% initial eight-year cycle load test result. For 2017, FPL's distribution pole inspection program costs were approximately \$52 million, including inspection and remediation costs for wood and concrete poles.

3. 2018 Plan

FPL's 2018 distribution pole inspection plan includes the inspection of approximately 1/8 of its pole population. FPL will also inspect CCA poles and perform load assessment tests, consistent with its recently approved exemptions and monitoring/sampling requirements.

The estimated cost for the 2018 distribution pole inspection program is \$40 - \$50 million, including inspection and remediation costs for wood and concrete poles.

4. NESC compliance for strength and structural integrity

The following methods are used by FPL's vendor to determine NESC compliance for strength and structural integrity of FPL's poles.

Strength Assessment

On wood distribution poles, a strength assessment is performed to determine compliance to the NESC standards for strength. The strength assessment is based on a comparison of measured circumference versus original circumference of the pole. The effective circumference is measured and data collected to ensure that the actual condition of the pole meets NESC Grade B requirements as outlined in Table

261-1A Section 26 of the NESC. If the pole does not meet the Grade B NESC requirements, the pole will be reinforced or replaced.

Loading Assessment

On all distribution poles, a loading assessment is also performed and includes a combination of field measurements, span length, attachment heights (including third-party attachments) and wire sizes based on FPL construction standards. If NESC requirements are not met, the pole will be reinforced, replaced or the attachments will be relocated. As noted earlier, in October 2014, the FPSC approved FPL’s request to modify its pole inspection program by providing an exemption from performing a load assessment during the third eight-year cycle on any pole which tested less than 80% of full loading during FPL’s initial 8-year cycle.

5. Summary data and results of 2017 pole inspections

Florida Power and Light Annual Wood Pole Inspection Report (Reporting Year 2017) (Cycle Year 4 of 8)												
a	b	c	d	e	f	g	h	i	j	k	l	m
Total # of Wooden Poles in the Company Inventory	# of Pole Inspections Planned this Reporting Year	# of Poles Actually Inspected this Reporting Year	# of Poles Failing Inspection this Reporting Year	Pole Failure Rate (%) this Reporting Year	# of Poles Designated for Replacement this Reporting Year	Total # of Poles Replaced this Reporting Year	# of Poles Requiring Minor Follow-up this Reporting Year	# of Poles Overloaded this Reporting Year	Method(s) V = Visual E = Excavation P= Prod S = Sound B= Bore R = Resistograph	# of Pole Inspections Planned for Next Reporting Year	Total # of Poles Inspected (Cumulative-to-Date) in the Current 8-Year Cycle	% of Poles Inspected (Cumulative-to-Date) in the Current 8-Year Cycle
1,075,419 (1)	133,630	123,279	Grade B & C 6,225	5.0	Grade B & C 2,216	Grade B & C 2,201	4,009	2,039	V, E, S, B	124,915	511,387 (1)	47.6 (1)
If b - c > 0, provide explanation		While FPL fell short of its planned 2017 wood pole inspections, total pole inspections (Wood + Concrete) cycle to date is slightly ahead of schedule (50.44% vs 50.0%). Program aims to inspect approximately 1/8 of all wood and concrete poles each year; pole inspection counts will vary from year to year. Cycle to date Total Inspections: 585,504 / 1,160,848 = 50.44%										
If d - g > 0, provide explanation		Grade B & C poles failing > poles replaced due to: - Of the 6,225 wood poles failing inspection in the 2017, 4,009 are reinforcement (not replacement) candidates. 3,692 poles were reinforced in 2017, including 1,691 poles from the 2017 inspection cycle and 2,001 poles from the 2016 inspection cycle. Remaining reinforcement candidates from the 2017 Inspection Cycle will be reinforced during 2018. - 2,201 poles, including concrete, were replaced from the 2016 inspection cycle with any remaining to be replaced pending permitting. Replacement candidates identified during the 2017 Inspection Cycle will be replaced during 2018.										
Description of selection criteria for inspections		Inspections within FPL's nine established inspection zones are prioritized using inputs such as critical infrastructure facility (CIF) customers (E.G., hospitals, 911 centers, etc.), and reliability performance.										
(1) FPL began its second 8-year inspection cycle in January 2014, at which time there were approx. 1,160,848 total distribution poles in the system, 1,075,419 of which were wood. FPL continues to inspect approx. 1/8 of the total population in each year of the cycle.												

As previously discussed, poles are remediated if they do not meet the higher NESC Grade B requirement. Remediation is categorized into two groups (Level 1 and Level 2) in order to allow for more effective scheduling and resource allocation.

Level 1 – This group of remediation requires more immediate attention. Urgent needs are addressed immediately.

Level 2 - Remediation that does not require immediate attention.

6. The cause(s) of each pole failure for poles failing inspections, to the extent that such cause(s) can be discerned in the inspection. Also, the specific actions the company has taken or will take to correct each pole failure.

The table below provides a summary of the wood pole inspection findings for the poles identified as poles requiring remediation.

Inspection Type	Remediation Type	NESC Min. (Grade C)	FPL Requirement (Grade B - Higher Standard)	Total Wood Remediation	Primary Cause(s)	Remediation Options
Visual	Restorable	0	n/a	0	N/A	Pole to be strengthened by installing C-Truss
	Non-Restorable	16	n/a	16	Decayed/Split Top, Cracks/Woodpecker Holes	Pole to be replaced with new pole.
Strength	Restorable	149	3,020	3,169	Shell Rot	Pole to be strengthened by installing C-Truss
	Non-Restorable	132	869	1,001	Decayed/Split Top, Woodpecker Holes	Pole to be replaced with new pole.
Loading	Restorable	0	840	840	Overloaded	Pole to be strengthened by installing ET Truss
	Non-Restorable	21	1,178	1,199	Overloaded	Pole will be evaluated to determine the most cost effective method to address the overloading. Options are: 1. Install intermediate pole(s). 2. Replace pole with a stronger class pole.

Transmission

7. Description of Pole Inspection Program

Consistent with its approved inspection plans, FPL performs annual ground level visual inspections on 100% of its transmission poles/structures – wood, concrete and steel. FPL also performs climbing or bucket truck inspections on all of its transmission poles/structures on a cyclical basis. In addition to the poles/structures being inspected, the condition of various transmission pole/structure components are assessed, including attachments, insulators, cross-arms, cross-braces, foundations, bolts, conductors, overhead ground wires (“OHGW”), guy wires, anchors, and bonding. An overview of FPL’s transmission pole/structure inspection procedures are outlined below:

Wood Poles/Structures

Annually, FPL performs ground level visual inspections on 100% of its wood transmission poles/structures, inspecting from the ground-line to the pole top. The visual inspection includes a review of the pole’s/structure’s condition as well as pole attachment conditions. If a wood transmission pole/structure does not pass visual inspection, it is not tested any further and it is designated for replacement.

FPL also performs a climbing or bucket truck inspection on all wood transmission poles/structures on a six-year cycle. If a wood pole/structure passes this visual

inspection, a sounding test is then performed. If the result of a sounding test warrants further investigation, the wood pole/structure is bored to determine the internal condition of the pole. All bored poles, not designated for replacement, are treated with an appropriate preservative treatment.

Concrete and Steel Poles/Structures

Annually, FPL performs ground level visual inspections on 100% of its concrete and steel transmission poles/structures. The inspection incorporates an overall assessment of the pole/structure condition (e.g., cracks, chips, exposed rebar, and rust) as well as other pole/structure components including the foundation, all attachments, insulators, guys, cross-braces, cross-arms, and bolts. If a concrete or steel pole/structure fails the inspection, the pole/structure is designated for repair or replacement.

From 2006-2013, FPL performed a climbing or bucket truck inspection on all concrete and steel transmission poles/structures on a six-year cycle. From 2014 to 2016, FPL performed a bucket truck inspection on all 500 kV structures on a six-year cycle. Climbing or bucket truck inspections for steel and concrete poles/structures are now conducted on a 10-year cycle.

8. 2017 Accomplishments

In 2017, 100% of FPL's transmission poles/structures were visually inspected and approximately 1/6 of its wood and 1/10 of its other concrete and steel transmission poles/structures were inspected by climbing or from a bucket truck. Additionally, storm and pre-construction mitigation patrols were conducted on all concrete and steel poles/structures. For 2017, the cost for FPL's transmission pole/structures inspections program and follow-up work identified from the 2016 inspections was approximately \$40 million.

9. 2018 Plan

In 2018, the estimated cost for the transmission pole/structure inspections program and follow-up work identified from the 2017 inspections is approximately \$31 million.

10. NESC compliance for strength and structural integrity

The following methods are used during pole/structure inspections for determining NESC strength and structural integrity compliance:

Strength Assessment

For wood transmission poles/structures, the strength assessment is based upon a comparison of measured circumference versus the original circumference of the pole. If the effective circumference is measured and the actual condition of the pole does not meet NESC requirements as outlined in Table 261-1A Section 26 of the NESC, the pole is designated for reinforcement or replacement.

Loading Assessment

FPL performs a loading assessment on wood transmission poles/structures with 3rd party attachments. This assessment is based on a combination of pole/structure length, framing configuration, span length, attachment heights (including 3rd party attachments) and conductor size. If the loading does not meet NESC requirements, the pole is designated for reinforcement, replacement or relocation of the third-party attachments.

11. Explanation of the inspected pole selection criteria

FPL prioritizes its transmission pole/structure inspections based on factors such as framing configuration (structural loading), transmission components, system importance, customer count, and inspection history for a transmission line section. Other economic efficiencies, such as multiple transmission line sections within the same corridor, are also considered.

12. Inspection Summary Data for the Previous Year

Summarized in the following sections are the 2017 inspection results and causes by transmission pole/structure materials:

Wood Transmission Poles/Structures

FPL’s 2017 results from its six-year cyclical wood transmission pole/structure inspections are in the table, below. In addition, FPL performed its annual ground level visual inspections on 100% of its wood poles/structures.

Florida Power & Light Company Annual Wood Pole Inspection Report (Reporting Year 2017)												
a	b	c	d	e	f	g	h	i	j	k	l	m
Total # of Wooden Poles in the Company Inventory as of 01-2017	# of Wood Pole Inspection Planned this Annual Inspection	# of Wood Poles Inspected this Annual Inspection	# of Poles Failing Inspection this Annual Inspection	Pole Failure Rate (%) this Annual Inspection	# of Wood Poles Designated for Replacement this Annual Inspection	Total # of Wood Poles Replaced this Annual Inspection	# of Poles requiring Minor Follow-up this Annual Inspection	# of Poles Overloaded this Annual Inspection	Method(s) V=Visual E=Excavation P=Prod S=Sound B=Bore R=Resistograph	# of Wood Pole Inspections Planned for Next Annual Inspection Cycle	Total # of Wood Poles Inspected (Cumulative) in the 6-Year Cycle to Date	% of Wood Poles Inspected (Cumulative) in the 6-Year Cycle to Date
7,925	3,055	2,878	648	22.5%	574	1,934	n/a	0	V / P / S / B	2,116	15,301	193%
If b - c > 0, provide explanation		177 poles that were identified as wood for the 2017 inspection cycle were changed out to concrete in 2017.										
If d - g > 0, provide explanation												
Description of selection criteria for inspections		FPL prioritizes its inspections based on factors such as: framing configuration (structural loading), transmission components, system importance, customer count, and inspection history for a transmission line section. Other economic efficiencies, such as multiple transmission line sections within the same corridor, are also considered.										

* Column G represents the total number of transmission poles/structures replaced not only through its inspection program, but also from relocations, proactive rebuilds and system expansion.

Concrete and Steel Transmission Structures

FPL performed visual ground level inspections on 100% of its concrete and steel poles/structures and bucket inspections on 1/6 of its 500kV structures and 1/10 of all other concrete and steel poles/structures in 2015. The table below provides FPL's 2017 concrete and steel transmission pole/structure inspection results.

POLE INSPECTION REPORT			
Company: Florida Power & Light			
Summary of Concrete & Steel Transmission Pole Inspections			
Period: January 2017 thru December 2017			
Type of Inspection:	Concrete & Steel Transmission Structures Visual / Bucket		
Type of Pole:			
	Average Class:	Varies	
	Materials	Concrete & Steel	
	Average Vintage	2001	
	Installed Population as of 1/1/2017	57,585	
		% Planned	% Completed
Percent Inspections Planned & Percent Completed:		100%	100%
Reason for Variance/Plan to Address Backlog:			
No. of inspected poles addressing a prior backlog		0	0
		No. of Structures	% of Inspection
No. of structures identified for reinforcement:		0	0.0%
No. of poles identified for replacement:		7	0.01%
No. of structures identified for a change inspection cycle::		n/a	n/a
No. of structures that required no change in inspection cycle or remediation		57,578	99.9%
No. of structures identified as overloaded		0	0.0%

13. Identified Inspection Items (by Cause)

Summarized below are the cause(s) of the identified transmission pole/structure inspection failures along with specific actions that have or will be taken for each level of priority

Wood Transmission Structures

Wood Transmission Structures					
Inspection Item	Level 1	Level 2	Non-Priority	Primary Cause(s)	Remediation
Ground-Line	19	37	6	Decay, Rot, Insects, Voids	Level 1 - Reinforce, Remediate, or Replace in year found
Above Ground-Line	182	410	42	Wood-Pecker Holes, Decay, Insects	Level 2 - Reinforce, Remediate, or Replace the following year
Overload (3 rd Party)	0	0	0	3rd Party Attachments	Non-Priority – No action required
Total	201	447	48	Refer to the Above	

To help prioritize and to better plan for future years, FPL has established the following priority levels of inspection reporting:

Level 1 Priority - Identified as approaching the minimum NESC requirements for Grade B construction with the potential to fall below the minimum before the end of the current year. These poles/structures are incorporated into current year work plans for reinforcement, remediation, or replacement. The timeframe for completion is typically driven by customer provided access to the facilities and the coordination of a scheduled outage with other facility clearances scheduled on the grid.

Level 2 Priority - Identified as approaching the minimum NESC requirements for Grade B construction but will not fall below the minimum prior to the end of the following year. These poles/structures are identified for reinforcement, remediation, or replacement as planned work by the end of the calendar year following inspection.

Non-priority – Identified as having reduction in capacity, but still above the minimum NESC requirements. When reported, these structures are documented but do not require specific action until the next inspection.

Concrete & Steel Transmission Structures

Concrete & Steel Transmission Structures					
Inspection Item	Level 1	Level 2	Non-Priority	Primary Cause(s)	Remediation
Base of Pole (Identified for Replacement)	1	6	136	Corrosion / Cracks	Level 1 - Reinforce, Remediate, or Replace in year found
Base of Pole (Identified for Repair)	0	0	0	Cracks	Level 2 - Reinforce, Remediate, or Replace the following year
Total	1	6	136	Refer to the Above	Non-Priority – No action required

To help prioritize and to better plan for future years, FPL has established the following priority levels of inspection reporting:

Level 1 Priority - Identified as approaching the minimum NESC requirements for Grade B construction with the potential to fall below the minimum before the end of the current year. These poles/structures are incorporated into current year work plans for reinforcement, remediation, or replacement. The timeframe for completion is typically driven by customer provided access to the facilities and the coordination of a scheduled outage with other facility clearances scheduled on the grid.

Level 2 Priority - Identified as approaching the minimum NESC requirements for Grade B construction and will not fall below the minimum prior to the end of the following year. These poles/structures are identified for reinforcement, remediation, or replacement as planned work by the end of the calendar year following inspection.

Non-priority – Identified as having structural deterioration, but still meets all of the NESC strength requirements. When reported, these structures are documented but do not require specific action until the next inspection.

SYSTEM HARDENING

System Hardening

Distribution

Consistent with FPL's FPSC-approved 2016–2018 Electric Infrastructure Storm Hardening Plan (see Order PSC16-0560-AS-EI), FPL continued to implement its three-prong approach in 2017 by applying: (1) EWL to critical infrastructure facilities ("CIF"); (2) incremental hardening, up to and including EWL, to "Community Project" feeders; and (3) construction design guidelines that require EWL for the design and construction of all new overhead facilities, major planned work, and relocation projects. Additionally, FPL continued its next phase of hardening, which addresses the remaining feeders in its system and targets current feeders that do not meet EWL criteria (referred to as "wind zone" hardening); and substations without any hardened feeders (referred to as "geographic" hardening).

- In 2017, FPL continued to work on prior years' CIF (e.g., hospitals, 911 centers) and community project feeders (e.g., police/fire stations, water treatment plants, grocery stores, gas stations and pharmacies); feeders that serve essential community needs. Additionally, FPL applied EWL on 16 "01" switches, 2 highway crossings, 134 "Wind Zone" and 13 "Geographic feeders". Also, FPL's Design Guidelines were applied to all new construction and other construction activities described above.
- As of 2/28/18, FPL has hardened 95% of all CIF (e.g., hospitals, 911 centers) feeders and community project (e.g., grocery stores, gas stations) feeders in its system. The remaining 5% of CIF and community project feeders are in various stages of construction (e.g. over 40% of the remaining feeders are between 75%-99% complete and another 30% are more than 50%-74% complete). The vast majority of these remaining projects are expected to be completed by June 2018, with the exception of a few projects that are delayed as a result of issues beyond FPL's control (e.g., pending municipal OH/UG conversions projects, FDOT roadway projects, permitting issues).
- FPL also continued to promote overhead-to-underground conversions in 2017. Three municipalities signed agreements under FPL's GAF tariff and moved forward with their projects. There were also 10 municipal requests for non-binding/order of magnitude estimates during 2017. Additionally, in June of 2017 FPL proposed, and in January of 2018 the Commission ultimately approved FPL's revisions to the calculation of an applicant's contribution in aid of construction (CIAC) in the Company's underground distribution conversion tariff. The new formula generally reduces the costs for a governmental entity to undertake an overhead to underground conversion of feeders and should facilitate the ability of more local governments to pursue this course of action.

1. Describe each Storm Hardening activity undertaken in the field during 2017. 2017 Wind Zone Feeders

2. Describe the process used by your Company to identify the location and select the scope of feeder hardening projects.

Upon the completion of CIF and Community feeders, the 2017 plan primarily focused on the next phase of hardening, which addresses the remaining feeders in its system and targets current feeders that do not meet EWL criteria (referred to as “wind zone” hardening); and substations without any hardened feeders (referred to as “geographic” hardening). These feeders were identified and prioritized by our Operations and Reliability teams by the difficulty to restore and the overall performance of the feeders.

3. Provide the costs incurred and any quantified expected benefits

Total Distribution hardening costs in 2017 were approximately \$420.0 million. This includes costs associated with completing projects initiated before 2017 and completed in 2017. This excludes the incremental costs related to applying Design Guidelines on new construction, relocation projects and daily work, as these costs are not specifically tracked.

For expected benefits, refer to FPL's filings in Docket Nos. 070301-EI, 100266-EI, 130132-EI, 160021-EI and 160061-EI.

4. Discuss any 2018 projected activities and budget levels

In 2018, consistent with FPL's FPSC-approved 2016–2018 Electric Infrastructure Storm Hardening Plan (see Order PSC16-0560-AS-EI in Docket No. 160021-EI), FPL will continue its next phase of hardening, which addresses the remaining feeders in its system and targets current feeders that do not meet EWL criteria (referred to as “wind zone” hardening); and substations without any hardened feeders (referred to as “geographic” hardening). Additionally, FPL will begin lateral hardening and plans to initiate an undergrounding pilot for laterals that have dense vegetation, are more likely to incur an outage during a storm, and/or are difficult to restore.

Total Distribution hardening costs are projected to be approximately \$492 million in 2018.

Transmission

1. Description of Hardening Programs

Please refer to FPL's response to Item 1 – Description of Transmission Hardening Programs, in Initiative 4 of the Storm Preparedness Initiatives section of this filing for a description of FPL's transmission storm hardening initiatives.

2. Method of Selection

Please refer to FPL's response to Item 2 – Method of Selection, in Initiative 4 of the Storm Preparedness Initiatives section of this filing for a description of the method FPL used to determine the selection of each transmission storm hardening initiative.

3. 2017 Accomplishments

Please refer to FPL's response to Item 4 – 2017 Accomplishments, in Initiative 4 of the Storm Preparedness Initiatives section of this filing for a summary of the 2017 accomplishments for the replacement of wood transmission structures.

4. 2018 Plans

Please refer to FPL's response to Item 5 Proposed 2018 Plans, in Initiative 4 of the Storm Preparedness Initiatives section of this filing for a summary of the proposed plans for hardening of wood transmission structures.

STORM PREPAREDNESS INITIATIVES

Summary – Storm Preparation Initiatives

(1) Vegetation Trim Cycles – In 2017, FPL continued its three-year average cycle and mid-cycle programs for feeders and its six-year average trim cycle for laterals.

(2) Joint Use Audits – Approximately 20 percent of FPL's jointly used poles are audited annually through its joint use surveys. Additionally, joint use poles are inspected through FPL's pole inspection program. Survey and inspection results continue to show that through FPL's joint use processes and procedures, along with cooperation from joint pole owners and third-party attachers, FPL has properly identified and accounted for the joint use facilities on its system.

(3) Six-year Transmission Structure Inspection Cycle – In 2017, FPL performed ground level visual inspections on 100% of its transmission poles/structures. Additionally, FPL performed climbing or bucket truck inspections on approximately 1/6 of its wood transmission poles/structures, and 1/10 of its other concrete and steel poles/structures and conducted storm and pre-construction mitigation patrols on all concrete and steel poles/structures.

(4) Hardening the Transmission System – In 2017, FPL continued executing its plan to replace all wood transmission structures in its system. At year-end 2017, 91% of FPL's total transmission structure population is steel or concrete.

(5) Distribution Geographic Information System ("GIS") – FPL completed its five originally approved key Distribution GIS improvement initiatives in 2011. These initiatives included developing a post-hurricane forensic analysis tool and the addition of poles, streetlights, joint use survey and hardening level data to the GIS. Updates to the GIS continue as data is collected through inspection cycles and other normal daily work activities.

(6) Post-Storm Forensic Collection/Analysis –

FPL has post-storm forensic data collection and analysis plans, systems and processes in place and available for use. During 2017, FPL collected forensic data and performed analyses on Hurricane Irma for distribution, transmission and substation. The collected data and analysis results indicate that: hardened feeders performed statistically better than non-hardened feeders; out of 3,562 poles identified for replacement during the restoration efforts, 26 (0.73%) were hardened distribution poles; automated feeder switches avoided over 546,000 outages and flood monitors prevented potential significant damage at two substations. The majority of damage identified resulted from tree conditions and flying debris.

(7) OH and UG Storm Performance – FPL has plans, systems and processes in place to capture OH and UG storm performance.

Data collection and analysis was performed following the impacts of Hurricane Irma. Regarding the performance of the overhead infrastructure, during Hurricane Irma, approximately 84% of the hybrid feeders (i.e., a combination of overhead and underground facilities), 89% of the overhead feeders and 24% of the overhead laterals that were impacted by Hurricane Irma experienced an outage. For transmission, approximately 21% of the overhead transmission line sections that were impacted by Hurricane Irma experienced an outage.

The underground infrastructure performance during Hurricane Irma resulted in approximately 84% of the hybrid feeders, 30% of the underground feeders and 4% of the underground laterals, that were impacted by Hurricane Irma experienced an outage. For transmission, 0% of the transmission underground line sections that were impacted by Hurricane Irma experienced an outage.

(8) Increased Coordination with Local Governments – In 2017, FPL continued its efforts to improve local government coordination. Activities included: (1) meetings with county emergency operations managers to discuss critical infrastructure locations in each jurisdiction; (2) inviting federal and state management personnel to participate in FPL’s annual company-wide storm preparedness dry run and; (3) FPL’s EA managers made presentations to educate communities served by FPL on topics of interest including service reliability, energy conservation, storm readiness and power generation. These presentations help address the informational needs of local community-based organizations. EA managers provided over 1000 community presentations in 2017.

(9) Collaborative Research on Hurricanes/Storm Surge – Collaborative research efforts led by the Public Utility Research Center (“PURC”) continue and the third extension of the MOU (through 2018) was approved. On December 5, the Steering Committee organized a web-based workshop for over 40 participants from the Project Sponsors hosted by the University of Florida. The workshop was held to orient new members on the model of the costs and benefits of storm hardening strategies and to discuss the integration of data from recent storm activities.

(10) Natural Disaster Preparedness/Recovery Plans – FPL’s Storm Emergency Plan identifies emergency conditions and the responsibilities and duties of the FPL emergency response organization for severe weather and fires. The plan covers the emergency organization, roles and responsibilities and FPL’s overall severe storm emergency processes. These processes describe the planning activities, restoration practices, public communications, and coordination with government, training, practice exercises and lessons-learned evaluation systems. The plan is reviewed annually and revised as necessary.

STORM PREPAREDNESS INITIATIVE No. 1

Initiative 1 – Vegetation Management Trim Cycles

1. A complete description of the Company’s vegetation management program (policies, guidelines, practices) for 2017 and 2018 in terms of both activity and costs.

Tree limbs and branches, especially palm fronds, are among the most common causes of power outages and momentary interruptions. The primary objective of FPL’s distribution vegetation management program is to clear vegetation from the vicinity of distribution facilities and equipment in order to provide safe, reliable and cost-effective electric service to its customers. The program is comprised of multiple initiatives designed to reduce the average time customers are without electricity as a result of vegetation-related interruptions. This includes preventive maintenance initiatives (planned cycle and mid-cycle maintenance), corrective maintenance (trouble work and service restoration efforts), customer trim requests, and support of system improvement and expansion projects, which focus on long-term reliability by addressing vegetation that will impact new or upgraded overhead distribution facilities.

FPL follows the National Electric Safety Code (“NESC”), the American National Standards Institute (“ANSI”) A-300, and all other applicable standards while considering tree species, growth rates and the location of trees in proximity to our facilities when performing line clearing. Danger trees (leaning, structurally damaged, or dead) outside of right-of-way (“ROW”) which cannot be effectively trimmed are candidates for customer-approved removal.

On May 30, 2007, the FPSC issued Order No. PSC-07-0468-FOF-EI approving the continuation of FPL’s three-year average trim cycle for feeders and the implementation of a six-year average trim cycle for laterals.

FPL maintains its distribution feeder lines on a three-year average trim cycle because it offers the optimal balance of reliability performance and vegetation clearing cost. The primary benefit of properly maintaining feeder lines is that a feeder outage can affect, on average, approximately 1,500 customers, as compared to a lateral line that can affect, on average, approximately 35 customers.

FPL enhances its approved feeder trimming plan through its mid-cycle trimming program, which encompasses patrolling and trimming feeders between planned maintenance cycles to address tree conditions that may cause an interruption prior to the next planned cycle trim. Mid-cycle work units typically have a trim age of 12 to 18 months and usually involve certain fast-growing trees (e.g., palm trees) that need to be addressed before the next scheduled cycle trim date.

Customers often contact FPL with requests to trim trees around lines in their neighborhoods and near their homes. As a result of our discussions with these customers and/or a follow-up investigation, FPL either performs the necessary

trimming or determines that the requested trimming can be addressed more efficiently by completing it through the normal scheduled cycle trimming.

Finally, a very important component of FPL’s vegetation program is providing information to customers to educate them on our trimming program and practices, safety issues, and the importance of placing trees in the proper location, i.e., FPL’s “Right Tree, Right Place” (“RTRP”) program. RTRP is a public education program based on FPL’s core belief that providing reliable electric service and sustaining our natural environment can go hand-in-hand and is a win-win partnership between the utility and its customers.

In 2017, FPL continued to maintain three and six year average trim cycles for feeders and laterals, respectively, and cleared additional feeder miles through its mid-cycle program. Additionally, FPL continued to pursue the challenges associated with critical palm removals, customer refusals and danger trees outside the right-of-way.

<u>Cost</u> (Millions)	<u>Feeder Miles</u>			<u>Lateral Miles</u>
	<u>Cycle</u>	<u>Mid-Cycle</u>	<u>Total</u>	<u>Cycle</u>
\$63.5	4,381	7,148	11,529	3,560

2. Definitions of terms: danger tree, demand tree, spot trim, mid-cycle trim

Danger Tree – A tree, beyond normal clearance specification, that has high likelihood to fail and impact facilities. Danger tree failure can be associated with factors such as trees that are leaning, structurally damaged, dead or are a certain tree species.

Spot trim – Addresses a specific location vs. entire line segment through hot spot trimming. This includes trouble tickets or reliability-related requests.

Demand Trim/Customer Trim Request (“CTR”) – Addresses tree conditions reported by a customer. FPL will inspect and, if trimming is required for safety or reliability, the necessary work is performed.

Mid-cycle Program -- 12 to 18 month patrol and trim cycle to address conditions on feeders that will require trimming prior to scheduled planned maintenance.

3. The criteria used to determine whether to remove a tree, replace a tree, spot trim, demand trim, or mid-cycle trim.

Tree removal – Trees which cannot be effectively trimmed to meet clearance specifications and ANSI A-300 are evaluated based on species and cost to remove. Palms are a primary removal candidate, especially for feeders.

Tree replacement – FPL does not have a tree replacement program. On a targeted and very limited basis, contribution toward replacement is considered.

Spot trim –Spot trimming addresses a specific location based on reliability performance.

Demand trim – Tree meeting FPL’s existing Customer Trim Request criteria (See Item 12).

Mid-cycle Program – Any feeder not scheduled for maintenance in the current year is eligible for mid-cycle trimming and typically has a trim age of 12 - 18 months.

4. Provide an analysis of the cost and benefits of the Company’s program vs. three-year trim cycle program

See Direct Testimony & Exhibits of: Manuel B. Miranda filed December 20, 2006 (Docket No. 060198-EI).

5. Tree clearing practices in utility easements and authorized rights-of-way

FPL’s line clearing practice is to pre-notify customers of scheduled maintenance activities. FPL clears lines (within easements, authorized rights-of-way and in limited cases outside of easements) to its clearance specifications to protect its facilities and maintain reliable service.

6. Relevant portions of utility tariffs pertaining to utility vegetation management activities within and authorized rights-of-way

Within easement;

Rule 2.8 Access to Premises:

The duly authorized agents of the company shall have safe access to the premises of the customer at all reasonable hours for installing, maintaining and inspecting or removing company’s property, reading meters, trimming trees within the company’s easements and right of way, and other purposes incident to performance under or termination of the company’s agreement with the customer, and in such performance shall not be liable for trespass.

Rule 5.6 Unobstructed Access To Company’s Facilities:

Company shall have perpetual unobstructed access to its overhead and underground facilities, such as poles, underground cables, pad-mounted transformers and meters in order to perform repair and maintenance in a safe, timely and cost-efficient manner.

7. Tree removal practices for trees that abut and/or intrude into easements and authorized rights-of-way

Trees identified for removal within an easement or ROW will usually involve customer contact and a signed Tree Work Authorization (“TWA”) by the customer. If removal is not possible, FPL will clear to the extent possible while complying with applicable line clearing standards and practices. In addition, FPL routinely communicates with local communities about the various issues concerning tree removals on residential property and in public ROW.

8. Tree clearing practices outside of easements and authorized rights-of-way

FPL will clear, to the extent possible, any vegetation that encroaches upon its facilities, to provide for adequate clearances while complying with applicable line clearing standards and practices.

9. Relevant portions of utility tariffs pertaining to utility vegetation management activities outside easements and authorized rights-of-way

Outside easement;

There are no specific utility rights to remove trees outside a ROW. Through FPL’s RTRP efforts, customers are informed and encouraged to take responsibility and carefully consider the mature height of vegetation planted adjacent to power structures.

10. Tree removal practices for trees outside of easements and authorized rights-of-way

Trees outside an easement or ROW that are targeted for removal will typically involve customer contact and a signed TWA. If a removal is not possible, FPL will clear to the extent possible while complying with applicable line clearing standards and practices.

11. Relevant portions of utility tariffs pertaining to customer vegetation management obligations as a term or condition of electric service

These General Rules and Regulations are a part of the Company's Tariff covering the terms and conditions under which Electric Service is supplied by the Company to the Customer. They are supplemental to the "Rules and Regulations Governing Electric Service by Electric Utilities" issued by the FPSC.

Company tariffs;

Rule 5.5 Interference With Company's Facilities:

The customer should not allow trees, vines and shrubs to interfere with the Company's adjacent overhead conductors, service wires, pad-mounted transformers and meter. Such interference may result in an injury to persons, or may cause the customer's service to be interrupted. In all cases, the customer should request the Company to trim or remove trees and other growth near the Company's adjacent overhead wires, and under no circumstances should the customer undertake this work himself, except around service cables when specifically authorized by and arranged with the company.

Rule 2.9 Right of Way:

The customer shall grant or cause to be granted to the Company and without cost to the Company all rights, easements, permits and privileges which, in the opinion of the Company, are necessary for the rendering of service to the customer.

12. Company practices regarding customer trim requests ("CTRs"; also known as "demand trim" requests)

CTR that are inspected and found to involve potentially hazardous conditions are immediately scheduled for clearing. If conditions are inspected and determined not to be potentially hazardous, FPL advises the customer that the work will be deferred to scheduled maintenance.

13. 2018 projected activities and budget levels

In 2018, FPL's distribution vegetation management plan includes trimming approximately 11,000 feeder miles (including feeder cycle and mid-cycle miles) and approximately 4,000 lateral cycle miles. The plan also includes restoration activities and customer trim requests. Total estimated costs associated with these activities are approximately \$67.8 million.

14. Include the requirements of applicable orders:

**Initiative 1
Three-Year Vegetation Cycle**

System Vegetation Management Performance Metrics

2017 System Totals

15. Support for continuation of the Company Program, rather than a Three-Year Cycle program, should be included in this section of the report. Include all tables and additional analysis supporting continuation of the Company Program in this section of the report

No new information is available that would change the initial analysis/results provided by FPL in Docket No. 060198-EI.

16. Local Community Participation

FPL routinely communicates with local communities about the various issues surrounding line clearing. The issues that are most often discussed are the method of trimming, clearances, notification and debris. FPL's practice is to pre-notify customers of scheduled maintenance activities whose neighborhoods will be affected by line clearing activities. These communications include an overview of the scheduled maintenance activities, a safety message and customer contact number for more information. FPL's RTRP program is also an example of its outreach to communities. The program provides information to customers to educate them on our trimming program and practices, safety issues and the importance of placing trees in the proper location.

a) ROW tree clearing

FPL's line clearing practice is to pre-notify customers of scheduled maintenance activities. FPL clears lines (within easements, authorized rights-of-way and in limited cases outside of easements) to our clearance specifications to protect our facilities.

b) Easement tree clearing

See response to 16 a., ROW tree clearing.

c) Hard-to-access facilities

See response to 16 a., ROW tree clearing.

d) Danger trees not within ROW or within easements where the utility has unobstructed authority to remove the danger tree

Danger trees outside an easement or ROW that are targeted for removal will typically involve customer contact and a TWA form, signed by the customer, authorizing the removal. If a removal is not possible, FPL will clear the vegetation to the extent possible while complying with applicable line clearing standards and practices.

e) Trim-back distances

FPL will clear, to the extent possible, any vegetation that may encroach or is in conflict with our facilities to provide for adequate clearances while complying with applicable line clearing standards (NESC) and practices (ANSI).

17. Danger Trees

Danger tree failure can be associated with factors, such as trees that are leaning, structurally damaged and/or dead, as well as certain tree species. While FPL removed approximately 23,000 trees in 2017, some of which were most likely danger trees, FPL does not specifically track the identification/removal of danger trees.

STORM PREPAREDNESS INITIATIVE No. 2

Initiative 2 – Joint Use Pole Attachment Audits

FPL Overview

FPL administers annual audits of joint use facilities (poles owned and attached to by FPL or telephone companies) and attachments to its poles (CATV and telecommunication attachments). Approximately 20% of FPL's service territory is audited annually through its joint use surveys in order to determine the number and ownership of jointly-used poles and associated attachments.

Additionally, joint use poles are inspected as part of FPL's pole inspection program. This is described more fully in FPL's pole inspection reporting requirements response.

Describe the extent of the audit and results pertaining to pole reliability and NESC safety matters. The intent is to assure the Commission that utilities know the status of their facilities and that reasonable efforts are taken to address pole reliability and NESC safety matters.

In addition to FPL's pole inspection program, NESC safety audits are conducted by the FPSC. Apparent NESC variances are identified and recorded by FPSC auditors. FPL investigates the apparent NESC variances and makes corrections where necessary. Additionally, as part of FPL's daily work activities (e.g., construction, maintenance, reliability initiatives, etc.), NESC safety issues may be identified and corrected. While the FPSC variances are tracked, FPL does not specifically track corrective activities completed as part of its daily activities.

a) Percent of system audited.

Feeders: Approximately 20% annually.

Laterals: Approximately 20% annually.

FPL does not specifically maintain/track its joint use audits at this level of detail. See FPL's overview above.

b) Date audit conducted?

Ongoing – See FPL's overview above.

c) Date of previous audit?

Ongoing – See FPL's overview above.

d) List of audits conducted annually. Joint use poles, attachments, strength/loading tests – see FPL's overview above and FPL's pole inspection reporting requirement response.

Suggested Alternatives: None.

<u>JOINT USE AUDITS</u>	
(A) Number of company owned distribution poles. (FPL owned poles at 12/31/17)	1,188,202
(B) Number of company distribution poles leased. (Non-FPL owned poles)	223,635
(C) Number of owned distribution pole attachments. (FPL owned poles w/attachments)	861,187
(D) Number of leased distribution pole attachments. (Non-FPL owned poles w/attachments) (1)	223,635
(E) Number of authorized attachments.	1,331,287
(F) Number of unauthorized attachments.	0
<u>POLE INSPECTIONS – JOINT USE POLES</u>	
(G) Number of distribution poles strength tested.	69,337
(H) Number of distribution poles passing strength test. (2)	Grade B – 67,158
(I) Number of distribution poles failing strength test (overloaded). (2)	Grade B – 13 (0.02%)
(J) Number of distribution poles failing strength-test (other reasons). (2)	Grade B&C 2,166
(K) Number of distribution poles corrected (strength failure).	N/A – see Note 3
(L) Number of distribution poles corrected (other reasons).	N/A – see Note 3
(M) Number of distribution poles replaced.	N/A – see Note 3
<u>FPSC SAFETY AUDITS</u>	
(N) Number of apparent NESC violations involving electric infrastructure.	314
(O) Number of apparent NESC violations involving third-party facilities.	119
Suggested Alternatives:	None

Notes: (1) Non-FPL owned poles with FPL and another attaching entity (e.g., CATV) = 168,280

(2) NESC required standard = Grade C; FPL Higher Standard = Grade B

(3) K, L, M not tracked at the joint use level

State whether pole rents are jurisdictional or non-jurisdictional. If pole rents are jurisdictional, then provide an estimate of lost revenue and describe the company's efforts to minimize the lost revenue.

"Pole rent" revenues are jurisdictional. There are no lost revenues since back-billings for joint use pole ownership true-ups, as well as unauthorized attachments, are made back to the date of the previous audit/true-up.

STORM PREPAREDNESS INITIATIVE No. 3

Initiative 3 – Six-Year Transmission Structure Inspection Cycle

1. Description of Inspection Program

Please refer to FPL’s response to Item 7 – Description of Pole Inspection Program, in the Transmission section of the Pole Inspection Report for a description of FPL’s transmission structure inspection program. Included in FPL’s response are inspection procedures for wood, concrete and steel transmission structures.

2. 2017 Accomplishments / 2018 Plans

Please refer to FPL’s response to Item 7 – Description of Pole Inspection Program, in the Transmission section of the Pole Inspection Report as well as the three tables on the following two pages.

6-year Transmission Inspections – Results/Plans

Transmission Circuit, Substation & Other Equipment Inspections

	2017		2017		2018	
	Plan	Actual	Budget \$	Actual \$	Plan	Budget \$
(A) Total transmission circuits	1,241	1,229	n/a	n/a	1,229	n/a
(B) Transmission circuit inspections	1,031	1,031	\$1.4M ⁽¹⁾	\$1.2M ⁽¹⁾	1,086	\$1.5M ⁽¹⁾
(C) Percent transmission circuits inspected	83.8 %	83.8%	N/A	85.7%	88.41 %	N/A
(D) Total transmission substations ⁽²⁾	N/A	607	N/A	N/A	622	N/A
(E) Transmission substations inspected ⁽²⁾	607	622	\$0.4M	\$0.6M	622	\$0.4
(F) Percent transmission substations inspected ⁽²⁾	100%	100%	N/A	N/A	100%	N/A
(G) Transmission equip. inspections (other equip) ⁽³⁾	(3)	(3)	(3)	(3)	(3)	(3)
(H) Percent trans. equip inspection comp (other equip) ⁽³⁾	(3)	(3)	(3)	(3)	(3)	(3)

(1) FPL does not budget or track expenditures based on structure materials. As such, the dollar amounts shown in the table above represent all transmission structure inspections regardless of materials.

(2) Values shown for D, E and F include both transmission and distribution substations. FPL does not budget or track these items separately.

(3) Items G and H are included within FPL transmission line and/or substation inspections.

Non-Wood Transmission Structure Inspections

	2017		2017		2018	
	Plan	Actual	Budget \$	Actual \$	Plan	Budget \$
(A) Total non-wood transmission tower structures	57,585	57,585	n/a	n/a	60,694	n/a
(B) Transmission tower structure inspections	57,585	57,585	\$1.4M*	\$1.2*	60,694	\$1.5M*
(C) Percent of transmission tower structures inspected**	100%	100%	-	85.7%	100%	-

* FPL does not budget or track expenditures based on structure materials. The dollar amounts shown in the table above represent all transmission structure inspections regardless of materials.

** 100% visually inspected; bucket truck/climbing inspections conducted on cycles.

Wood Transmission Structure Inspections ⁽¹⁾

	2017		2017		2018	
	Plan	Actual	Budget \$	Actual \$	Plan	Budget \$
(A) Total number of wood transmission poles.	7,925	7,925	-	-	7,925	-
(B) Number of transmission poles strength tested.	3,055	2,878	\$1.4M ⁽²⁾	\$1.2M ⁽²⁾	2,116	\$1.5M ⁽²⁾
(C) Number of transmission poles passing strength test.	-	2,230	-	-	-	-
(D) Number of transmission poles failing strength test (overloaded).	-	0	-	-	-	-
(E) Number of transmission poles failing strength tests (other reasons).	-	648	-	-	-	-
(F) Number of transmission poles corrected (strength failure)	0	0	n/a	n/a	0	n/a
(G) Number of transmission poles corrected (other reasons)	574	1,934 ⁽³⁾	\$29.4M ⁽⁴⁾	\$38.2M ⁽⁴⁾	648	\$32.3M ⁽⁴⁾
(H) Total transmission poles replaced.	574	1,934 ⁽³⁾	\$29.4M ⁽⁴⁾	\$38.2M ⁽⁴⁾	648	\$32.3M ⁽⁴⁾

⁽¹⁾ In addition to the 2017 results for its six-year cyclical inspection, FPL performed annual ground level visual inspections on 100% of its wood poles/structures.

⁽²⁾ FPL does not budget or track expenditures based on structure materials. As such, these dollar amounts represent all transmission structure inspections regardless of materials.

⁽³⁾ The replacement quantities provided in (H) represent the total number of transmission structures replaced through all initiatives/activities including condition assessments, relocations, proactive rebuilds, and system expansion.

⁽⁴⁾ Dollar amounts are only for FPL's condition assessment follow-up program.

STORM PREPAREDNESS INITIATIVE No. 4

Initiative 4 – Hardening of Existing Transmission Structures

1. Description of Transmission Hardening Programs

Wood Structure Replacement Program

In 2006, FPL began its Transmission hardening initiative by targeting replacement of single pole un-guyed wood structures. In 2008, FPL enhanced its hardening initiative to include replacement of all wood transmission structures over the next 25 to 30 years. FPL's approved 2013-2015 hardening plan accelerated the replacement of wood transmission pole/structures to within the next 10 to 15 years. Replacements are performed as part of maintenance, hardening, relocations and system expansion programs.

Ceramic Post (“CPOC”) Transmission Line Insulators

In 2006, FPL implemented a comprehensive plan for replacing existing ceramic post insulators with polymer post insulators on concrete poles. In 2014, FPL completed this initiative.

Storm Surge/Flood

FPL's approved 2013-2015 hardening plan included several storm surge/flood initiatives to better protect certain transmission facilities and expedite restoration of service to customers. This included water intrusion mitigation, the installation of real-time water level monitoring systems and communication equipment in 223 substations and the purchase of additional mobile fleet equipment. In 2014, FPL completed this initiative.

2. Method of Selection

All wood transmission structures are being replaced as a result of the 2004 and 2005 storm seasons lessons learned. All wood transmission structures are expected to be replaced by 2022.

3. Prioritizing Wood Structures Replacement

Being a network transmission system, FPL's first priority must be the overall system reliability and stability for the State of Florida. Prioritization factors also include proximity to high wind areas, system importance, customer counts, and coordination with other business unit storm initiatives. Other economic efficiencies, such as opportunities to perform work on multiple transmission line sections within the same corridor, are also considered. The transmission plan also incorporates the distribution hardening plans for communities into its prioritization.

4. 2017 Accomplishments

Wood Structure Replacement Program

In 2017, FPL replaced a total of 1,934 wood transmission structures. These structures were replaced with FPL's current design standards of round spun concrete poles. Total 2017 wood transmission structure replacement costs were approximately \$54 million. At year-end 2017, 91% of FPL's total transmission structure population is steel or concrete.

5. 2018 Plans

Consistent with the approved 2016-2018 Hardening Plan, FPL will replace a total of 1,400 - 1,800 wood structures in 2018. Transmission hardening costs for 2018 are estimated to be \$29.5 million.

STORM PREPAREDNESS INITIATIVE No. 5

Initiative 5 – Distribution Geographic Information System (GIS)

Efforts Undertaken at FPL to Meet the Commission Initiative - FPL has completed the following originally approved key initiatives which support the Commission's objective:

1. Distribution GIS Improvements – Post-Hurricane Forensic Analysis

FPL developed a mobile electronic inspection tool that creates routes within the hurricane-force wind area. Field employees travel the routes collecting observed damage and documenting the cause of the damage. This field data is uploaded to a database for further analysis by our staff engineers. This tool replaced the sampling methodology used in 2005.

2. Distribution GIS Improvements – Poles

FPL has added inspection records and pole attributes in coordination with its Pole Inspection Program ("PIP"). Updates to the GIS pole data are on-going with inputs from PIP, hardening and daily work activities.

3. Distribution GIS Improvements – Joint Use Data

By year-end 2008, all Joint Use data was added to the GIS. Updates are on-going as audits are completed and data is received from FPL's Joint Use vendor.

4. Distribution GIS Improvements – Level of Hardening

Level-of-hardening attributes have been added to the GIS system including the load calculation and hardening level. The system continues to be updated as hardening projects and activities are completed

5. Distribution GIS Improvements – Streetlights

FPL completed the initial loading of all streetlight data into the FPL Distribution GIS in 2011. As on-going audits and changes in the streetlight inventory from daily work activities are loaded into FPL's GIS, an interface to its Customer Information System ensures continued accuracy.

STORM PREPAREDNESS INITIATIVE No. 6

Initiative 6 – Post Storm Forensic Data Collection/Analysis

1. Has Forensics Team been established?

Yes.

2. Have forensic measurements been established? If yes, please describe/provide.

Forensic measurements have been established and are entered into portable field computers at forensic locations.

At each forensic location:

- Pictures are taken to show the specific damage and the surrounding area.
- GPS Coordinate information is recorded
- A data collection form is completed, detailing information such as:
 - o Pole specific information
 - o Wire specific information
 - o Framing and loading information
 - o Tree conditions
 - o Foreign attachments
 - o Surrounding area characteristics
 - o Debris conditions
 - o Soil conditions
 - o Wind speed rating

3. Has a forensics database format been established?

Yes. The information captured from the portable field computers via FPL's mobile mapping and field automation software is uploaded into a PostgreSQL database.

4. Describe/provide GIS and forensic data tracking integration

Storm track information is imported via a shape file to FPL's mobile mapping and field automation software for identification of storm affected equipment. From the storm affected feeders and FPL's Trouble Call Management System, forensics team routing is selected.

FPL's mobile mapping and field automation software visually identifies the facilities to be patrolled and provides the tools needed to perform forensic work, such as audit trail of route traveled and data collection forms.

5. Describe/provide forensics and restoration process integration

(Established and documented processes to capture forensic data during a restoration process)

General Process – Overhead Distribution

- Obtain information on the storm path and responding wind bands.
- Assigned area teams cover specific areas in the path of the storm.
- Provide route/track to each forensic team.
- Utilize the “Tracking” or audit trail function in FPL’s mobile mapping and field automation software to document areas patrolled.
- Perform an investigation at each damage location encountered that meets patrol criteria. Damage locations are to include poles, wires or any other equipment that is damaged or that has caused a customer outage.
- Utilize portable field computers to complete a data collection form for each observation.

Hardened Forensic Process – Overhead Hardened Distribution Feeders

- Obtain information on the storm path and corresponding wind bands.
- Assigned forensic teams will cover a statistically significant sample of hardened overhead distribution feeders that experience an interruption within the storm impacted area.
- Utilize the “Tracking” or audit trail function in FPL’s mobile mapping and field automation software to document areas patrolled.
- Perform a forensic investigation at each damage location encountered that meets patrol criteria. Damage locations are to include poles, wires or any other equipment that is damaged or that has caused a customer outage.
- Utilize portable field computers to complete a data collection form for each observation.

6. Describe/provide any forensic data sampling methodology

The General Process – Overhead Distribution will rely on FPL’s mobile mapping system, utilizing it to patrol damaged facilities. Observations will be made at all damage locations along the routes, including poles, wires, and distribution equipment.

The Hardened Forensic Process will rely on FPL’s mobile mapping system, utilizing it to cover a statistically significant sample of hardened overhead distribution feeders. Observations will be made at all damage locations within the selected feeders including poles, wires, and other distribution equipment.

7. Describe/provide forensic reporting format used to report forensic results to the Company and Commission

Forensic results will be categorized by equipment type and will show failure modes. For pole failures, FPL will provide information on NESC standard strength requirements and whether a criterion was met.

8. Forensic activities and costs incurred in 2017

FPL has post-storm forensic data collection and analysis plans, systems and processes in place and available for use. During 2017, FPL collected forensic data and performed analyses on Hurricane Irma for distribution, transmission and substation. The collected data and analysis results indicate that: hardened feeders performed statistically better than non-hardened feeders; out of 3,562 poles identified for replacement during the restoration efforts, 26 (0.73%) were hardened distribution poles; automated feeder switches avoided over 546,000 outages and flood monitors prevented potential significant damage at two substations. The majority of damage identified resulted from tree conditions and flying debris.

Forensic costs are not tracked separately.

9. 2018 projected activities and costs

Forensic costs are not tracked separately but will be dependent on storm events and the subsequent deployment of the forensic teams.

STORM PREPAREDNESS INITIATIVE No. 7

Initiative 7 – Overhead and Underground Storm Performance Data

Items a–j (all tables) – Though both system and district level data for these metrics are for the most part available during storms on a non-differentiated basis, they are not available for overhead and underground separately. The primary reason is that FPL’s feeders are mostly overhead/underground hybrids. Therefore, FPL is not able to classify a large portion of the data required to calculate these metrics as either overhead or underground. Furthermore, performing the calculations on a subset of data that could be differentiated could yield misleading results. Though not of direct concern for these tables, item b cannot be provided even on a non-differentiated basis because cause codes are not available during storms.

Item k (all tables) – Prospectively, equipment performance by type may be available from forensics depending on the specific characteristics associated with any given storm. Data gathering is highly dependent on the storm having sufficient intensity to result in a restoration lasting a number of days. Otherwise, there will be insufficient time for the forensics teams to collect adequate data. Additionally, depending on the nature of the storm, certain types of equipment may not be impacted. For example, there may be little flooding or storm surge. Or, a given storm’s location may disproportionately impact areas with predominantly wood poles or front lot construction. In any case, results will only be statistically significant on a system-level basis and, therefore, cannot be provided at a district level.

FPL Alternative Plan – FPL can fulfill the spirit of the requested set of metrics with alternatives that demonstrate the performance differences between the overhead and underground facilities during storms. As previously stated, because FPL’s feeders are almost universally overhead/underground hybrids, differentiated performance would be difficult to determine. However, laterals are typically comprised of only a single type of construction so they will be used as a proxy for differentiated system performance. The relative performance results will be derived from two sources. First, forensic field data collection will be conducted during restoration using statistically valid samples drawn daily for both overhead and underground tickets. Second, post-restoration analysis of available ticket comments will be performed, particularly for underground damage since problems with buried equipment may not be field-observable.

FPL Alternative Plan Metrics:

- **Relative proportion of infrastructure damaged:**
 - Percent of overhead circuits with damage relative to the total overhead circuits in the storm-impacted areas.
 - Percent of underground circuits with damage relative to the total underground circuits in the storm-impacted areas.

- **Count of facility damage observed by type (item k on a system level basis).** This will include an evaluation of statistical validity based on samples achieved (due to storm characteristics discussed previously).
 - Overhead – total quantities stratified by pole type, location on lot, etc. (as available)
 - Underground – total quantities stratified by cable construction method, etc. (as available)
 -
- **Primary root cause of damage by type.** In those instances that can be determined through field observation or post-restoration ticket comments review.
- **Estimated repair time.** Due to the complexity of underground construction and possible undetected damage, field estimates of repair time are impractical. Instead a system wide estimate of UG damage will be interpolated by multiplying the observed damage counts, by equipment type by the typical estimated construction man-hours required to repair.

STORM PREPAREDNESS INITIATIVE No. 8

Initiative 8 - Increased Coordination with Local Governments

FPL Overview

FPL's External Affairs ("EA") organization consists of manager-level employees who are dedicated to meeting the information and communication needs of local governments and communities every day. These individuals interface with members of local governments and community leaders to identify and resolve issues of common concern to the company and the communities it serves. EA is engaged with local governments on critical infrastructure, line clearing, storm readiness, joint use of public rights-of-way, fuel/rate adjustments, undergrounding and other day-to-day issues.

FPL's Account Managers assigned to governmental accounts provide customer service to government accounts and are available to assist with many of the issues that affect local governments, including storm readiness, restoration and recovery. They are also especially helpful to local governments on account issues such as billing, fuel costs, construction and service reliability.

FPL conducts meetings with county emergency operations managers to discuss critical infrastructure locations in each jurisdiction. Agreed-upon locations are factored into FPL's storm restoration and capacity shortage plans. FPL invites local, state and federal emergency response personnel to participate in its annual storm dry-run. This exercise provides FPL the opportunity to share its plans to improve service reliability and storm communications, and solicit input on how FPL and government agencies can better collaborate in emergency situations.

FPL maintains an External Response Team that consists of trained representatives who assist EA in meeting the needs of local governments in times of emergency. This team of more than 70 employees staffs county EOCs and interfaces with local officials throughout the FPL service territory. By staffing EOCs, FPL is physically present to provide company updates to county and city officials, as well as obtain information from the EOC to help FPL's restoration efforts.

Describe extra tree trimming and underground conversion projects implemented. Describe any special considerations or options local governments attempted to secure and the utility's response.

FPL meets with all counties and municipalities requesting information on line clearing and underground conversions. This includes working with local governments to establish language in applicable ordinances that encourages citizens to plant the right tree in the right place to avoid interference with overhead facilities, and requested meetings and workshops with cities interested in overhead to underground conversions. Discussions have also included special considerations such as using public rights-of-way and the use of underground switch cabinets. Additionally, FPL meets with local governments to explain its efforts to enhance

service reliability and provide information on hardening projects within their jurisdiction.

- FPL meets with local governments that express interest in converting overhead facilities to underground service. Discussions include FPL's GAF tariff, which provides an incentive for applicable overhead to underground conversion projects. In 2017, three municipalities signed the GAF tariff agreement and moved forward with their projects. There were also 10 municipal requests for non-binding/order of magnitude estimates during 2017. Additionally, in June of 2017 FPL proposed, and in January of 2018 the Commission ultimately approved FPL's revisions to the calculation of an applicant's contribution in aid of construction (CIAC) in the Company's underground distribution conversion tariff. The new formula generally reduces the costs for a governmental entity to undertake an overhead to underground conversion of feeders and should facilitate the ability of more local governments to pursue this course of action.

Does FPL conduct storm response tests or a dry run in order to test and evaluate its storm preparation and response plans?

Yes. In addition to its annual corporate-wide storm dry-run and individual business unit-driven dry-run exercises, FPL takes every opportunity to test its storm preparation and restoration plans to be ready for a potential event. Additionally, depending on the forecasted track of an actual storm, this may include the activation of FPL's storm command center and the mobilization and positioning of employees and equipment for rapid restoration. These activities provide opportunities to evaluate plans, systems and communications in order to be even better prepared for the next event. FPL representatives also take part in city and/or county sponsored drills and exercises upon request and invite key government stakeholders and emergency managers to our annual corporate-wide storm dry run event.

What quantifiable indices (metrics), if any, are the companies using to assess the effectiveness with which they began implementing initiative #8?

ONGOING PROGRAMS

a) Number of city/county liaisons initiated.

EA and Government Account ("GA") Managers routinely interface with city and county government officials to discuss storm-readiness and other issues of concern. The quantity of these interfaces and the unique situational dynamics of each issue make it administratively burdensome (non-productive) to capture on an ongoing basis. FPL does keep track of the number of EOCs that are contacted, as well as the number that are staffed with company representatives.

b) Number of periodic communications initiated with cities/counties.

EA provides quarterly e-mail communications to city and county governments. FPL also established an online Government Portal website that allows government officials to obtain the latest media releases and information on customer outages, estimated restoration times, FPL crew resources, outage maps and other information. GA account managers also communicate with cities and counties through monthly newsletters that address topics from energy conservation to storm preparation.

c) Number of restoration training and assistance programs conducted. EA and other FPL representatives meet with local governments to discuss critical infrastructure function locations and provide training on subjects such as how to address/report on downed power lines.

d) Number of city/county problem resolution plans.

EA and GA Managers interface with city and county governments routinely to discuss storm readiness and other issues of concern. The quantity of these interfaces and the unique situational dynamics of each storm make it administratively burdensome (nonproductive) to capture on an ongoing basis.

STORM PREPARATION

a) Number of communication links and contingency plans established.

FPL is prepared to support all 35 counties including seven satellite EOCs, should these locations be impacted by an emergency situation. FPL is able to report on the number of direct links with EOCs activated during emergency conditions. FPL representatives are also available to meet one-on-one with emergency managers, city and county government officials as needed.

b) Number of operational contingency plans developed for emergency services.

FPL meets with personnel from all county EOC locations to obtain input on critical infrastructure function locations within their jurisdiction. This critical infrastructure information is then factored into FPL's restoration and capacity shortfall plans. In addition, assigned FPL EOC representatives work with the counties to assist with emergency priorities and External Affairs Managers have open communications with counties and cities to address necessary contingencies. Tracking the number of contingency plans is administratively burdensome (non-productive) and does not provide meaningful information.

c) Number of public communications plans developed prior to, during and after the storm.

FPL develops communication plans for the media and all news/media releases are shared with local governments. Number of communication plans is not meaningful, but counting the number of releases to local governments can be accomplished.

d) Number of city/county mitigation guidelines prepared and distributed.

See response to b, above.

STORM RESTORATION

a) Number of emergency communication links maintained. FPL is prepared to support all 35 counties including seven satellite EOCs if impacted by an emergency situation. Also, an online Government Portal Web-site allows government officials to obtain the latest news releases and information, including customer outages, estimated restoration times, and FPL crew resource information.

b) Number of priority emergency services restored. FPL can report on critical infrastructure locations restored on a daily basis and provides this information through its Government Portal website.

c) For each tropical storm, hurricane and other emergency event impacting the utilities service area, what community coordination actions does the utility pursue not otherwise in a) and b), above. In addition to outgoing communications and information provided by FPL EOC representatives, FPL EA Managers are made available to interface with public officials to address their concerns.

ONGOING INITIATIVES

Communications Programs

FPL's EA managers make presentations to educate communities FPL serves on topics of interest including service reliability, energy conservation, storm readiness and power generation. These presentations help address the informational needs of local community-based organizations. EA managers provided over 1000 community presentations in 2017.

Government/Community Communications

FPL's email network to local elected officials continues to be utilized to share breaking news and important updates to local state and federal public officials in a timely and consistent manner.

Government Outreach

EA and GA Managers contact government officials prior to storm season through written correspondence and meetings.

Government Portal Website

FPL's EA organization implemented a dedicated Government Portal website which was customized with the types of information that government leaders rely on to help with their recovery efforts. This site was activated during the 2015 storm season. The site contains company-wide and county-specific information that includes:

- New alerts and releases
- Customer outage information and outage maps
- Critical infrastructure facility ("CIF") information
- Estimated time of restoration ("ETR") information
- FPL staging site locations and available personnel resources

STORM PREPAREDNESS INITIATIVE No. 9

Initiative 9 – Collaborative Research on Hurricane Winds & Storm Surge

Collaborative research efforts, led by the PURC, which began in 2007, have resulted in greater knowledge of: (1) vegetation management during storm and non-storm times; (2) wind during storm and non-storm events; and (3) hurricane and damage modeling towards further understanding the costs and benefits of undergrounding. These collaborative research efforts continue and the third extension of the MOU (through 2018) was approved. On December 5, the Steering Committee organized a web-based workshop for over 40 participants from the Project Sponsors hosted by the University of Florida. The workshop was held to orient new members on the model of the costs and benefits of storm hardening strategies and to discuss the integration of data from recent storm activities.

Report on Collaborative Research for Hurricane Hardening

Provided by

The Public Utility Research Center
University of Florida

To the

Utility Sponsor Steering Committee

Final Report dated February 2018

I. Introduction

The Florida Public Service Commission (FPSC) issued Order No. PSC-06-00351-PAA-EI on April 25, 2006 (Order 06-0351) directing each investor-owned electric utility (IOU) to establish a plan that increases collaborative research to further the development of storm resilient electric utility infrastructure and technologies that reduce storm restoration costs and outages to customers. This order directed IOUs to solicit participation from municipal electric utilities and rural electric cooperatives in addition to available educational and research organizations. As a means of accomplishing this task, the IOUs joined with the municipal electric utilities and rural electric cooperatives in the state (collectively referred to as the Project Sponsors) to form a Steering Committee of representatives from each utility and entered into a Memorandum of Understanding (MOU) with the University of Florida's Public Utility Research Center (PURC). The third extension of this MOU was approved last year by the Research Collaboration Partners and now extends through December 31, 2018.

PURC manages the work flow and communications, develops work plans, serves as a subject matter expert, conducts research, facilitates the hiring of experts, coordinates with research vendors, advises the Project Sponsors, and provides reports for Project activities. The collaborative research has focused on undergrounding, vegetation management, hurricane-wind speeds at granular levels, and improved materials for distribution facilities.

This report provides an update on the activities of the Steering Committee since the previous report dated February 2017.

II. Steering Committee Workshop

On December 5, the Steering Committee organized a web-based workshop for over 40 participants from the Project Sponsors hosted by the University of Florida. The workshop was held to orient new members on the model of the costs and benefits of storm hardening strategies and to discuss the integration of data from recent storm activities.

The presenter for the workshop was Ted Kury. He first described the model and the overall flow of the simulation element. He then described the 115 different inputs to the model and demonstrated where to find them. Next, he demonstrated a test run of 50 hurricane years for the state and demonstrated how the model illustrates the shift in the probability distribution of the outcome variables. Finally, he demonstrated the model's ability to simulate single hurricanes, both historical and hypothetical.

Following the demonstration, the members discussed strategies for adding data from recent storm experiences to the model.

III. Undergrounding

The collaborative research on undergrounding has been focused on understanding the existing research on the economics and effects of hardening strategies, including undergrounding, so that informed decisions can be made about undergrounding policies and specific undergrounding projects.

The collaborative has refined the computer model developed by Quanta Technologies and there has been a collective effort to learn more about the function and functionality of the computer code. PURC and the Project Sponsors have worked to fill information gaps for model inputs and significant efforts have been invested in the area of forensics data collection.

In addition, PURC has worked with doctoral and master's candidates in the University of Florida Department of Civil and Coastal Engineering to assess some of the inter-relationships between wind speed and other environmental factors on utility equipment damage. PURC has also been contacted by engineering researchers at the University of Wisconsin and North Carolina State University with an interest in the model, though no additional relationships have been established. In addition to universities, PURC was again contacted by researchers at the Argonne National Laboratory who expressed interest in modeling the effects of storm damage. The researchers developed a deterministic model, rather than a probabilistic one, but did use many of the factors that the Collaborative have attempted to quantify. They are currently working to incorporate stochastic elements into their model and have consulted PURC for guidance. Every researcher that contacts PURC cites the model as the only non-proprietary model of its kind.

The research discussed in previous years' reports on the relationship between wind speed and rainfall is still under review by the engineering press. Further results of this and related research can likely be used to further refine the model.

IV. Wind Data Collection

The Project Sponsors entered into a wind monitoring agreement with WeatherFlow, Inc., in 2007. Under the agreement, Florida Sponsors agreed to provide WeatherFlow with access to their properties and to allow WeatherFlow to install, maintain and operate portions of their wind monitoring network facilities on utility-owned properties under certain conditions in exchange for access to wind monitoring data generated by WeatherFlow's wind monitoring network in Florida. WeatherFlow's Florida wind monitoring network includes 50 permanent wind monitoring stations around the coast of Florida, including one or more stations located on utility-owned property. The wind monitoring agreement expired in early 2012; however, it was renewed in April 2017 and will renew automatically annually on the effective date for an additional one year period, unless terminated by the parties to the agreement.

V. Public Outreach

In last year's report we discussed the impact of increasingly severe storms on greater interest in storm preparedness. PURC researchers continue to discuss the collaborative effort in Florida with the engineering departments of the state regulators in Connecticut, New York, and New Jersey, Pennsylvania, and regulators in Jamaica, Grenada, Curacao, Samoa, and the Philippines. While all of the regulators and policymakers showed great interest in the genesis of the collaborative effort, and the results of that effort, they have not, at this point, shown further interest in participating in the research effort. PURC researchers also engaged with the popular media in preparation for, and in the wake of, Hurricane Irma.

VI. Conclusion

In response to the FPSC's Order 06-0351, IOUs, municipal electric utilities, and rural electric cooperatives joined together and retained PURC to coordinate research on electric infrastructure hardening. The steering committee has taken steps to extend the research collaboration MOU so that the industry will be in a position to focus its research efforts on undergrounding research, granular wind research and vegetation management when significant storm activity affects the state.

STORM PREPAREDNESS INITIATIVE No. 10

Initiative 10 – Natural Disaster Preparedness and Recovery Plans

FPL's Storm Emergency Plan identifies emergency conditions and the responsibilities and duties of the FPL emergency response organization for severe weather and fires. The plan covers the emergency organization, roles and responsibilities and FPL's overall severe storm emergency processes. These processes describe the planning activities, restoration practices, public communications, coordination with government, training, practice exercises and lessons learned evaluation systems. The plan is reviewed and revised annually, as necessary. A brief summary of the FPL plan, "FPL Emergency Plan – Severe Storms Brief", is included in the Appendix of this filing.

2018 STORM SEASON READINESS

2018 Storm Season Readiness

FPL's comprehensive storm plan focuses on readiness, restoration and recovery in order to respond safely and as quickly as possible in the event the electrical infrastructure is damaged by a storm. FPL is well-prepared for the 2018 storm season and continues to train and hone its storm preparedness and response capabilities.

In addition to the initiatives to strengthen its system and improve storm preparedness discussed previously, FPL will complete the following additional storm preparedness activities prior to the start of the 2018 storm season:

- Extensive storm restoration training based on employees' storm roles and four Incident Management Team Workshops throughout our service area;
- A full scale staging site exercise in advance of the peak of storm season to assess readiness of processes;
- Annual company-wide hurricane dry run in early May;
- Management workshops throughout the storm season to keep focus on key storm restoration policies/processes;
- Plan for and review of mutual assistance agreements to ensure they are adequate and ready;
- Continue to focus on improving outage communications and estimated restoration times to customers;
- Clear vegetation from all feeder circuits serving critical infrastructure functions (e.g. CIF hospitals, 911 centers, special needs shelters, police and fire stations, etc.) prior to the peak of hurricane season;
- Continue development and utilization of new technology to be utilized by storm damage assessors to improve damage assessment collection/analysis capabilities; and
- Participate in industry conferences to share best practices across companies from the 2017 storm season.

RELIABILITY

Summary – Reliability

Total FPL System (Distribution and Transmission) – Overall reliability is best gauged by SAIDI, the most relevant and best overall reliability indicator because it encompasses two other standard industry performance metrics for reliability: SAIFI (“System Average Interruption Frequency Index”) and CAIDI (“Customer Average Interruption Duration Index”). In 2017, FPL continued to provide excellent overall reliability for its customers, achieving a best-ever total FPL T&D system adjusted SAIDI of 56.4 minutes (2016 – 57.9 minutes). Additionally, FPL achieved a best ever FPL T&D system adjusted MAIFle (Momentary Average Interruption Frequency Index (events) of 4.9 momentary events (2016 – 6.4 momentary events).

Distribution – FPL’s 2017 overall adjusted distribution reliability, results were: SAIDI, a best-ever 54.3 minutes (2016 – 55.8); SAIFI 0.90 interruptions per customer (2016 – 0.92 interruptions); CAIDI, 60.0 minutes (2016 – 60.7 minutes) and a best-ever adjusted MAIFle, 4.3 momentary events (2016 – 5.8 momentary events).

Transmission – In 2017, FPL’s Transmission/Substation adjusted reliability results were: SAIDI of 2.1 minutes (2016 – 2.2 minutes); SAIFI, 0.16 interruptions per customer (2016 – 0.20 interruptions); and MAIFle, 0.6 momentary events (2016 – 0.6 momentary events).

Distribution Reliability

GENERAL

1. Discuss overall performance absent adjustments (Form 102).

FPL's overall unadjusted distribution reliability in 2017, as measured by SAIDI, was 3967 minutes. This unadjusted performance includes approximately 3913 minutes associated with tornados, named tropical storms/hurricanes, and planned interruptions, with the impacts of Hurricane Irma being the most significant – accounting for approximately 3900 minutes.

2. Describe the level of detailed reliability data the Company tracks.

FPL tracks the following reliability data associated with each individual interruption: customers affected, minutes interrupted, cause of outage, percentage of customers partially restored, device affected by interruption and location of the device. All of the interruption data is compiled to calculate reliability indices which are tracked throughout the year. The reliability indices that FPL tracks include the following: SAIDI, SAIFI, CAIDI, MAIFI, MAIFle, Lbar, CEMI-3, CEMI-5, CEMI-8, CEMM-35, CEMM-50 and CME (“Customer Momentary Experience”).

3. Describe Company efforts to increase critical review of detailed reliability data.

Daily reports are generated and distributed providing detailed information, such as the previous day's interruptions by device, month-to-date and year-to-date reliability indices. FPL's management utilizes the information in conducting a daily in-depth review of key reliability data to identify lessons learned and areas for improvement. This review also includes an assessment of upcoming weather and potential impacts, operational risks and a final review of the daily operations plan. FPL's management team also conducts monthly reliability reviews of the programs, objectives and actual performance vs. the plan. On an annual basis, FPL reviews its reliability performance and outage causes to direct its reliability programs for continued performance. With the aid of advanced statistical applications, such as Minitab and Six Sigma analysis, FPL performs statistical analyses to identify reliability trends and root causes and measure program benefits.

4. Describe the process used by your company to identify and select the level of detailed reliability data.

FPL's reliability data detail has been developed over the years based on industry practices, internal needs, as well as external requirements (e.g., regulators).

5. Discuss adjustments: Generation Events – None; Transmission Events - See Appendix; Distribution Events - See response to Distribution Reliability Item Nos. 11 & 13; Extreme Weather - See response to Distribution Reliability Item Nos. 7 & 10

6. Discuss adjusted performance.

Distribution - See summary at the beginning of this reliability section as well as the response to Item No. 1 above.

EXTREME WEATHER

7. Include in the discussion, the type of weather event, strength (wind speeds/surge-flood levels), locations affected and source of meteorological information.

Extreme Weather Events	Strength (wind speeds/surge-flood levels)	Landfall Location	Management Regions Affected
Tornado	Not Available	West Dade and West Palm Beach Jan 22-23	Affected: West Dade and West Palm Beach Supported: Central Dade, South Dade, North Dade, Gulfstream, Pompano, Wingate, Boca Raton, North Florida, Central Florida, Brevard, Treasure Coast, Manasota, Naples and Toledo Blade
Tornado	Not Available	North Florida Feb 7-8	Affected: North Florida Supported: Central Florida and Brevard
Fire	Not Available	Naples Mar 5-9	Affected: Naples Supported: Toledo Blade
Tornado	Not Available	Toledo Blade Mar 13	Affected: Toledo Blade Supported: Manasota and Naples
Tornado	Not Available	Wingate and Toledo Blade Mar 14	Affected: Wingate and Toledo Blade Supported: Manasota, Naples, Central Dade, South Dade, West Dade, North Dade, Gulfstream, Pompano, Boca Raton, West Palm Beach
Tornado	Not Available	Treasure Coast Mar 23	Affected: Treasure Coast
Tornado	Not Available	Naples and Treasure Coast Apr 6	Affected: Naples and Treasure Coast Supported: North Florida, Central Florida, Brevard, Toledo Blade, West Palm Beach and Boca Raton
Fire	Not Available	Naples Apr 22-23	Affected: Naples
Tornado	Not Available	Boca Raton May 2	Affected: Boca Raton Supported: West Palm Beach
Tornado	Not Available	North Florida May 24	Affected: North Florida Supported: Central Florida
Tornado	Not Available	Gulfstream Jun 5	Affected: Gulfstream Supported: Pompano, Wingate, North Dade and West Dade
Tornado	Not Available	North Florida Jun 6	Affected: North Florida Supported: Pompano, Gulfstream, Wingate, North Dade and West Dade
Tropical Storm Emily	Varies by Region	Storm made landfall in Manasota, all FPL management areas were impacted Jul 31-Aug 1	Affected: West Dade, Central Dade, South Dade, North Dade, Gulfstream, Pompano, Wingate, West Palm Beach, Boca Raton, North Florida, Central Florida, Brevard, Treasure Coast, Manasota, Naples and Toledo Blade
Tornado	Not Available	Treasure Coast and Brevard Aug 18	Affected: Treasure Coast and Brevard
Tornado	Not Available	Manasota Aug 26-27	Affected: Manasota Supported: West Dade, Central Dade, South Dade, North Dade, Gulfstream, Pompano, Wingate, Central Florida, Brevard, Treasure Coast, Naples and Toledo Blade
Hurricane Irma	Varies by Region	Storm made landfall in Naples, all FPL management areas were impacted Sep 7-24	Affected: West Dade, Central Dade, South Dade, North Dade, Gulfstream, Pompano, Wingate, West Palm Beach, Boca Raton, North Florida, Central Florida, Brevard, Treasure Coast, Manasota, Naples and Toledo Blade
Hurricane Nate	Varies by Region	While storm did not make landfall in FPL's service territory, FPL management areas were impacted Oct 8	Affected: Boca Raton, North Florida, Central Florida, Brevard, Treasure Coast, Naples and Toledo Blade
Tornado	Not Available	Gulfstream Oct 24	Affected: Gulfstream
Tropical Storm Philippe	Varies by Region	Storm made landfall in South Dade, all FPL management areas were impacted Oct 28-29	Affected: West Dade, Central Dade, South Dade, North Dade, Gulfstream, Pompano, Wingate, West Palm Beach, Boca Raton, North Florida, Central Florida, Brevard, Treasure Coast, Manasota, Naples and Toledo Blade

Data Source: <http://www.spc.noaa.gov/climo/reports>
<http://www.nhc.noaa.gov>

8. Describe the Company's efforts to avoid or minimize, in terms of costs incurred and outage duration, any similar events in the future.

As a part of FPL's continuous improvement philosophy, FPL gathers, after each extreme weather event, relevant information to critique its processes and performance. Also, FPL continues to further develop new technology to strengthen its emergency response, for example:

- improving customer outage information available to field restoration crews by developing mobile applications which combine outage tickets, weather information, electrical network information, customer energy consumption and voltage, restoration crew location, meter status and more – all layered on a map view and available to view on a computer tablet. This makes it easier to diagnose problems accurately to assist with outage analysis and improve interactions with our customers
- Expanding the use of smart meter information by creating multiple applications including restoration confirmation application, which allows restoration crews to confirm the power status of all smart meters affected by an outage before leaving the area. This has helped FPL identify embedded outages, resolve the problem on the first visit, and reduce repeat calls from customers
- installing submersible equipment to mitigate the impact of significant water intrusion in 12 vaults in the Miami downtown electric network that are located just at or within the FEMA 100-year flood elevation levels.

See also the pole inspections, hardening and storm season readiness sections in this report.

9. If the method of deriving the weather exclusion is different from the method used for 2016, please explain the changes and provide the CMI and CI for 2017 using the prior method.

No changes were made to FPL's exclusion methodology.

10. Provide the 2017 service reliability data for each extreme weather outage event that is excluded from your Company's 2017 Annual Distribution Reliability Report pursuant to Rule 25-6.0455.

The following data is provided in the Appendix:

- A) Causation
- B) Date
- C) CI
- D) CMI
- E) L-Bar

OTHER DISTRIBUTION ADJUSTMENTS

11. Discuss the causation of each type of distribution event that resulted in customer outages.

Causation	# of Outages	CI	CMI	LBAR
Planned Interruptions	25,771	279,467	24,053,437	114

12. Describe the Company's efforts to avoid or minimize any similar events in the future in terms of the level of costs incurred and outage duration.

FPL continually evaluates the need for planned crew and customer-requested outages by determining if there are alternative work methods that could minimize or prevent such an outage. If an outage is not preventable, FPL works with customers to schedule necessary outages during times which are more convenient for them (e.g., nights and weekends).

13. Provide the 2017 service reliability data for each distribution outage event that is excluded from your Company's 2017 Annual Distribution Reliability Report pursuant to Rule 25-6.0455.

The following data is provided in the Appendix:

- A) Causation
- B) Date
- C) CMI
- D) CI
- E) L-Bar

2017 ADJUSTED RELIABILITY CAUSES OF OUTAGE EVENTS

14. Five-year patterns/trends in outage causation for each of the top causes of outage events, including the frequency, duration, restoration time, cost incurred to restore service, remediation programs and remediation program costs.

Rank	PSC Cause Group	System Avg. Interruption (SAIDI)					Frequency (SAIFI)					Duration (CAIDI)				
		2013	2014	2015	2016	2017	2013	2014	2015	2016	2017	2013	2014	2015	2016	2017
1	Defective Equipment	26.5	25.9	24.2	23.6	23.8	0.38	0.41	0.40	0.38	0.39	69.0	63.7	60.5	61.5	61.7
2	Vegetation	10.6	12.9	12.8	10.5	9.9	0.10	0.12	0.13	0.09	0.10	110.0	105.6	102.4	113.2	99.4

See remediation programs/budget levels in FPL's response to Distribution Reliability Item No. 16. Costs incurred to restore service by cause are not specifically tracked.

15. The process used to identify and select the actions to improve the performance in each of the top causes of outages.

Annually, FPL evaluates its current reliability remediation programs and verifies the programs' need. In addition, FPL proposes new reliability remediation programs to improve its reliability performance concentrating on the highest cause codes and those cause codes that have shown trends needing attention.

16. 2018 activities and budget levels addressing each of the top causes of service outages.

In 2018, FPL has reliability programs aimed at reducing customer interruptions. These include:

Program*	Program Description	2018 Budget (\$M)	Impact on which Cause Codes
Vegetation Mgmt**	Integrated program designed to minimize tree and vine related interruptions.	\$67.8	Vegetation, Unknown
System Expansion	Provide the necessary feeder capacity to serve all customers during normal and emergency periods, and install the infrastructure necessary to support system contingency.	\$60.4	Remaining Causes
Cable Lateral	Reduce the number of direct buried lateral cable failures and reduce customer interruptions.	\$32.0	Equipment Failure
Handhole Inspections / Pad-mounted Transformers	Inspection/Remediation of non-compliant conditions. The purpose of this program is to maintain pad-mount transformer security.	\$21.5	Equipment Failure
Outlier Devices	Address lateral or OCR's with 3 or more interruptions in a given year	\$10.9	All
RA Switch Replacement	This program will proactively replace RA switches in order to enhance system operations and reliability.	\$7.3	Equipment Failure
Overhead Line Inspection & repairs	Conduct a visual and/or infrared inspection of the OH feeder infrastructure and thus reduce overhead interruptions.	\$6.0	Equipment Failure, Vegetation, Other Weather, Other, Unknown, Lightning
Submarine Cable	Reduce the number of Submarine feeder cable failures and reduce customer interruptions.	\$6.0	Equipment Failure
Vault Inspections and repairs (not including RA Switches)	Inspect vaults and Powell-Esco Switches. Program will mitigate vault interruptions and will help to identify any issues that need to be addressed before an interruption occurs.	\$5.6	Equipment Failure
Priority Feeders (including inspections)	Reduce the number of customers experiencing multiple amounts of interruptions and momentaries by identifying and correcting feeders experiencing the highest number of events and/or customers interrupted. The initiative may strengthen feeders up to and including extreme wind loading standards for additional overall reliability improvement.	\$4.2	All
OCR Replacement	Replace Oil Circuit Reclosers with Electronic Reclosers	\$3.7	Equipment Failures
Momentary Outliers	Address worse performing busses and high momentary feeders	\$3.7	All
Cable Feeder	Reduce the number of direct buried feeder cable failures and reduce customer interruptions.	\$3.2	Equipment Failure
VAR Management (installations and maintenance)	Install, relocate, maintain, and control distribution capacitor banks. This program will help maintain or improve power factor performance, improve system efficiency, reliability, and quality of service voltage to our customers.	\$2.4	Remaining Causes
Customer Impact	Projects targeted to improve reliability for specific customers or geographic areas	\$2.1	Equipment Failure

* Programs \geq \$1 million

** Also referred to as Storm Preparedness Initiative 1.

THREE-PERCENT FEEDER LIST

17. Identify whether any feeders appearing on the three-percent list more than once within a consecutive five-year period and any actions implemented to improve feeder performance.

See FPL's three-percent list in the Appendix.

See FPL's responses to Distribution Reliability Question numbers 16 and 18 for actions that FPL has taken to address these feeders.

18. Process used to identify and select the actions to improve the performance of feeders on the three-percent feeder list, if any.

FPL evaluates feeder performance on a daily basis and has addressed feeders on this list through its "Priority Feeder" program and one or more of its other reliability programs.

The objective of FPL's Priority Feeder program is to reduce the number of customers experiencing multiple amounts of interruptions and momentaries by identifying and correcting feeders experiencing the highest number of events and/or customers interrupted. The initiative may strengthen feeders up to and including extreme wind loading standards for additional overall reliability improvement.

19. 2018 activities and budget levels directed at improving feeder performance.

See response to Distribution Reliability Item No. 16.

REGIONAL RELIABILITY INDICES

20. Five-Year patterns/trends in each region's reliability for each index and on any overall basis.

Annual SAIDI performance for the Distribution unit and its regions

Data	Region	2013	2014	2015	2016	2017

21. The process used to identify and select actions to improve the regional reliability trends.

See FPL's response to Distribution Reliability Item No. 3.

22. Discuss any 2018 projected activities and budget levels directed at improving regional reliability performance.

See FPL's response to Distribution Reliability Item No. 16. Each program listed addresses equipment and devices at the management area level.

OVERHEAD – UNDERGROUND RELIABILITY

23. Describe the five year patterns/trends in reliability performance of underground systems vs. overhead systems.

The majority of FPL's customers are fed from circuits that are a hybrid of both overhead and underground systems. The methodology used to classify a customer as overhead (OH) is defined as those customers served by a feeder with combined feeder and lateral overhead miles greater than or equal to 95% of the total primary miles. Then, to classify a customer as underground (UG), customers must be served by a feeder with combined feeder and lateral underground miles greater than or equal to 95% of the total primary miles. The balance of customers is classified as Hybrid. According to this methodology, FPL has 144 OH feeders, 522 UG feeders, with the remaining 2,625 feeders classified as hybrid. This methodology was applied for FPL's responses to Distribution Reliability Question Nos. 23 & 26.

Five years reliability performance of underground, hybrid and overhead systems

Data	Year	Hybrid	OH	UG	ALL
SAIDI	2013	62.7	90.3	21.3	61.4
	2014	64.6	108.1	19.4	63.8
	2015	60.0	102.4	21.4	59.4
	2016	57.6	80.4	17.2	55.8
	2017	55.5	89.6	17.7	54.3
SAIFI	2013	0.91	1.22	0.41	0.89
	2014	1.01	1.35	0.40	0.99
	2015	1.03	1.23	0.33	0.99
	2016	0.97	1.01	0.27	0.92
	2017	0.94	1.31	0.26	0.90
CAIDI	2013	68.8	74.3	52.3	68.7
	2014	63.8	80.1	48.7	64.5
	2015	58.1	83.2	64.5	59.7
	2016	59.6	79.9	63.6	60.7
	2017	59.2	68.2	68.3	60.0
L BAR	2013	167	152	208	165
	2014	166	161	205	166
	2015	162	153	210	162
	2016	175	163	220	175
	2017	194	177	220	193

Historically, FPL's UG system's SAIDI performance has been better than its OH system, primarily driven by a better SAIFI. Also, the CAIDI associated with UG has generally performed better than OH due to FPL's looped UG system, which generally provides more opportunities for sectionalizing.

24. Describe Company efforts to separately track the reliability of overhead and underground systems.

FPL continually monitors each feeder interruption with a designation of either overhead, underground or hybrid system. FPL also utilizes the actual equipment type that fails in order to determine the necessary performance of its overhead and underground systems. For example, FPL has equipment codes that relate specifically to its overhead system (disconnect switches, insulators, jumpers, wire) and underground system (cable, switch cabinets, elbow and terminators).

After storm events, FPL performs the activities described in Initiative 7 of FPL's approved Storm Preparedness Initiatives.

25. Describe the process used by your company to identify and select the actions to promote underground distribution systems.

- **GAF Tariff** – FPL’s primary tool to promote overhead to underground conversions is its GAF tariff. The GAF’s goal is to lower storm restoration costs to all customers by providing an incentive for qualified government-sponsored conversions. Local governments are in the best position to guarantee the needed 100% customer service lateral conversion participation. Local governments are also best positioned to facilitate the construction through managing permitting, securing locations for the underground facilities, and negotiating with other utility providers. Additionally, in June of 2017 FPL proposed, and in January of 2018 the Commission ultimately approved FPL’s revisions to the calculation of an applicant’s contribution in aid of construction (CIAC) in the Company’s underground distribution conversion tariff. The new formula generally reduces the costs for a governmental entity to undertake an overhead to underground conversion of feeders and should facilitate the ability of more local governments to pursue this course of action.

In 2017, three municipalities signed the GAF tariff agreement and moved forward with their projects.

Local Community Presentations – FPL conducts numerous presentations with local community groups who are interested in exploring overhead-to-underground conversions.

Local Ordinances – There are local ordinances in effect in multiple counties within FPL’s service territory that require FPL to install new facilities underground. In addition, several municipalities require the customer to bury existing OH lines on or adjacent to their property when a major renovation is performed.

26. Provide Overhead and Underground Metrics

See FPL's response to Distribution Reliability Item No. 23 for classification criteria.
CEMI-5 is not available by OH and UG.

The miles below include only primary circuits (Feeders and Laterals).

2017 OH:

Number of miles = 5,489
Number of customers = 215,252
Number of Customer Minutes Interrupted (CMI) = 19,282,826
Number of Customers Interruptions (CI) = 282,621
L-Bar = $\frac{\text{Minutes of Interruption}}{\text{Total Number of Outages}} = \frac{1,519,593}{8,596} = 177$

2017 HYBRID:

Number of miles = 56,567
Number of customers = 4,341,527
Number of Customer Minutes Interrupted (CMI) = 240,963,708
Number of Customers Interruptions (CI) = 4,071,005
L-Bar = $\frac{\text{Minutes of Interruption}}{\text{Total Number of Outages}} = \frac{16,538,487}{85,112} = 194$

2017 UG:

Number of miles = 3,532
Number of customers = 356,088
Number of Customer Minutes Interrupted (CMI) = 6,315,376
Number of Customers Interruptions (CI) = 92,463
L-Bar = $\frac{\text{Minutes of Interruption}}{\text{Total Number of Outages}} = \frac{300,656}{1,369} = 220$

Data	Year	Hybrid	OH	UG	ALL
Number of Customers	2013	4,116,145	237,075	303,163	4,656,383

	2017	4.6	5.1	0.9	4.3

RELIABILITY RELATED CUSTOMER COMPLAINTS

27. Provide the five year history for reliability-related* customer complaints.

2012 43**
2013 32**
2014 30**
2015 37**
2016 41
2017 40

* As defined by the FPSC.

** From the FPSC’s “Review of Florida’s Investor-Owned Electric Utilities 2014 Service Reliability Reports”.

28. Describe Company efforts to correlate reliability-related complaints with reliability indices for applicable feeder, lateral and sub region.

FPL addresses reliability complaints on a case-by-case basis. Lessons learned from issues and resolutions identified may be incorporated into our processes, if deemed appropriate. FPL also utilizes certain reliability programs, e.g., Customer Impact and Priority Feeders, to address customer complaints.

29. Describe the process used by your company to identify and select systemic actions to improve reliability due to customer complaints. If no such program exists explain why.

See response to Distribution Reliability Item No. 28

Transmission Reliability

1. Reliability Adjustments Events (Transmission).

See Appendix.

2. Localized Versus System Wide Events.

None.

3. Description of Reliability Programs.

The transmission and substation reliability initiative is a two-fold program. The first part consists of on-going assessments and inspections of the transmission and substation system conditions and the associated mitigation work (as required). The second part consists of the following targeted reliability areas:

Animals – Program to prevent and mitigate the effects of animal related events to the transmission and substation system. Animals include (but are not limited to) roosting and prey birds, squirrels, monk parrots, and raccoons.

Equipment – Proactive replacement of both transmission and substation equipment reaching end of life. Items include (but are not limited to) insulators, OHGW, distribution breakers, transmission breakers, switches, and substation regulators.

Lightning – Items include bonding, grounding, and arrester installations.

Foreign Interference – Outreach and awareness safety program to minimize the impact of foreign interference (e.g., cranes, balloons, diggers, sailboats, etc.) into electrical lines

Vegetation Management – FPL performs condition assessments of every transmission right-of-way with a qualified arborist. Performed every six (6) months, these assessments include detailed prescriptions based on actual vegetation conditions. As a result of these assessments, the schedules are established to complete the identified work; at that point the work is prioritized and executed.

4. Five-Year Reliability Performance

Transmission/Substation
12 Months ending December 31

	2013	2014	2015	2016	2017
SAIDI	4.2	2.9	2.0	2.2	2.1
SAIFI	0.22	0.21	0.14	0.20	0.16
MAIFle	0.6	0.6	0.6	0.6	0.6

5. Description of Company's Tracking

FPL's Transmission/Substation group investigates all transmission and substation outages in order to identify root cause(s)/develop solutions. Reliability performance is tracked using SAIDI, SAIFI and MAIFI.

6. Method of Program Selections

For program selection, FPL's Transmission/Substation group utilizes historical reliability performance, trends, condition assessments and risk ranking.

ANNUAL DISTRIBUTION RELIABILITY REPORT 2017

SAIDI	= System Average Interruption Duration Index		
	= <u>Sum of All Customer Minutes Interrupted (CMI)</u>	<u>266,561,910</u>	54.3
	Total number of Customers Served (C)	4,912,867	
CAIDI	= Customer Average Interruption Duration Index		
	= <u>Sum of All Customer Minutes Interrupted (CMI)</u>	<u>266,561,910</u>	60.0
	Total number of Customer Interruptions (CI)	4,446,089	
SAIFI	= System Average Interruption Frequency Index		
	= <u>Total number of Customer Interruptions (CI)</u>	<u>4,446,089</u>	0.90
	Total number of Customers Served (C)	4,912,867	
MAIFle	= Momentary Average Interruption Event		
	= <u>Sum of All Customer Momentary Interruption Events (CME)</u>	<u>21,156,454</u>	4.3
	Total number of Customers Served (C)	4,912,867	
L BAR	= Minutes of Interruption (AO)	<u>18,358,736</u>	193
	Total Number of Outages (# of Outages)	95,077	
%CEMI-5	= <u>Sum of CEMI-5 Customers (# Cust>5)</u>	<u>38,504</u>	0.8%
	Total number of Customers Served (C)	4,912,867

* For MAIFle only, FPL utilizes a slightly different customer served count for the Management Areas. Specifically, customer counts are determined by counting the customers on all feeders out of the substations located in each Management Area, regardless of where that feeder runs geographically (i.e., a customer served could be located in another Management Area. This count is different than the customer served count used for SAIDI and SAIFI, which uses the actual count of customers with meters located in each Management Area.
