Subject: Smart Meters

Mr. Clemence,

This is to register my strong disapproval of the installation of current design smart meters on residential or private business establishments. The scope of data collection and reporting capabilities of these meters is unacceptably intrusive of our right of privacy.

It is fine if digital technology is used to collect gross usage data, kilowatt-hours used per month for billing, once each month period.

I am alarmed about the many ways our rights and freedoms are being usurped with the excuse that the government is taking care of us. I see the smart meter as nothing more than a tool for government to eventually gain control over our citizens as Agenda 21 is aimed at doing.

Government was seen by our wise founding fathers as being first charged with protecting our citizens and was structured in a way to try to prevent the perversion of our constitution ending in control of our citizens.

Please support our constitution and protect our republic.
