Mr. Clemence,

I am very concerned that we are being pushed into having Smart Meters installed, without, complete information. Is this a big corporation being a "big brother," and saying you have no choice in the matter. I am concerned about health issues but also my bill being increased. Both my husband and I have taken as many cautions to help conserve electricity that we possibly can to help the environment and to help us.

Why hasn't FPL had workshops all over the area, inviting the public....not just at commission meetings????? If they have done this, where were these meetings advertised????????? The meters are being installed three streets from my house???? I have no say in this matter?????????

Very concerned.
