Subject: Solar Policies
Date: Wednesday, June 24, 2015 9:28:43 AM

If solar energy were efficient and effective, private enterprise would be streaming to it. They are NOT because it is neither efficient or cost effective. If FPL was not getting a total tax write-off for the solar energy programs it is supporting (and building, such as Desoto County), they would not be doing any solar energy. As a Florida taxpayer, it is not my responsibility to provide tax dollars to increase production or use of a product that is not viable on its own. **I do not support any programs that include any mandates or subsidies** to the solar energy financially disasterous endeavors. Anyone who wants solar power should be free to pay for it on their own. I also do not support tax credits or write-offs for companies like FPL to promote something that is unsustainable on the free market. Why is our government pouring our hard earned money into something that cannot establish a cost-benefit???

Thank You
