Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Esther Prexl

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Sue Hildebrand

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. William Rothman

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. William J Tracy

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Beau Avila

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Lisa Hunkler

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,

Ms. Diane Rickman-Buckalew

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. David Karrmann

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,

Mrs. Dawn Powell-James

Dear Florida Public Service Commission,

Florida gets so much solar energy; don't you think it is embarrassing that we are allowing public utilities to slow the growth of solar power industries in the state? Your job should be to do what is right for the citizens of Florida, not protect old and dirty ways of generating and distributing power.

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Jim Broderick

Mrs. Joyce Calese

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Susan Boone

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Susan Eyclesheimer

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Diane Miller

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Scott Bellefeur

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Bianca Deleon

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Lisa Willman

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

I have a roof full of actives solar panels. It has saved me at least 50% of my electric costs, and I save even more by not using heat or air conditioning unless it is absolutely necessary. Everyone should have the same options. With net metering you save, and we save. It is a win-win solution. Please don't change it.

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Christine Johns

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mike Ringwood

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Sybel Lee

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Eric Ashley

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Rosette Walsh

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Virginia Leblanc

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Terri David

There is every reason for Florida, with abundant sunshine, to make use of solar power, especially as Florida is vulnerable to the effects of global warming, such as rising waters which can adversely affect much of Florida's economy. No better time than the present.

Sincerely,
Dr. Alan Barnes

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Jocelin Gardner

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ryan Miles

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Nancy Albarran

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
John Armstrong

Subject: Florida Solar Initiative

Dear Florida Public Service Commission,

I support growing the state's solar market power. This will create hundreds of jobs and show that we are a leader in renewable energy. Businesses and schools will save thousands on electricity costs. Let's not waste all this sunshine! Harness it and use it!

Sincerely,
Kristina Hagen

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Douglas Barnhart

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

As a new Florida resident in a condominium unit that I purchased over one year ago I am appalled that I am prevented from erecting solar panels either around or on top of my unit in an attempt to reduce my electric bill!

I am a senior citizen on a limited social security monthly income and being able to incorporate the items that I purchased prior to retirement would both lower my electric bill as well as to reduce my personal carbon footprint since I would be using less of the energy that is produced by the power plant that is burning fossil fuels!

I personally thank you for all that you can do to make my being able to use my solar equipment a reality!

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Jack Conklin

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Debra Semasko

Dear Florida Public Service Commission,

I endorse the message below and its well thought out points. But want to say a little of my own piece to show I didn't "just click send" and say what many feel. If anyone should be leading in solar energy, it should be "The Sunshine State!" Yet too many in positions that call the shots are in the hip pockets of those making old ways profits. Time to get with it.

ACD

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Miss Giselle Rodriguez

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Hello. I am a solar installer. I have installed solar on my home and brought my electricity bill down to a minimum monthly bill. Solar works. Solar PV technology has matured greatly in the past decade and micro inverter technology from companies like Enphase has brought about 'smart' electronics that proves that solar technology works well. Florida is the Sunshine State, and my solar system generates upwards of 70,000-Watts on a sunny, June day, and with this type of residential rooftop power, I can help make Florida less reliant on Big Coal. If the EPA continues to come down hard on Big Coal, then Florida residents will suffer since many of the utilities derive 60% of their power from coal. I am not for nuclear since the Fukushima disaster, so solar and wind power is the way, and both of these technologies Florida should be embracing. I sell my solar systems by showing people my electricity bill -- solar works! Just envision the countless Florida fields, filled with solar farms, and putting 1,000's of young people to work doing something revolutionary!!!

Sincerely,
Mr. Thomas Roberts

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

I invested considerable time and money a few years back to become certified and get the foundation to start a solar company in SE FL. I would have anticipated hiring 10-15 employees to cover the aspects of the business I was not suited to do myself.

I never pursued this dream because our policies, unlike in such "sunny" states as NY, MA, NH, IL, WA, our state policies were designed to support the "importation" of fossil fuels, rather than taking advantage of our own resources. We have a governor who claims to be "laser focused on creating jobs", but it seems these have to be in other states, not taking advantage of our plentiful solar resources to create "above minimum wage" jobs here in FL.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Nicholas Campbell

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Sharon Lloyd

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Dr. Coleman Sheehy

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Robert Nobrega

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. John Bartels

Mrs. Laura Cohen

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Joel Hitchman

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Joni Wilcox

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Sharon Franco

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Robert Boyle

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Toula Ameres

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Nathan Perer

Ms. Mary Fischer

Also, it would be nice if our elected officials would listen to the people who elected them and NOT to lobbyists for the power companies.

Florida residents can obtain solar energy for their homes for very reasonable terms, as many other states do. Imagine, we are the "Sunshine State", and one of only five states to not let all solar companies in our state.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Also, it would be nice if our elected officials would listen to the people who elected them and NOT to lobbyists for the power companies.

Florida residents can obtain solar energy for their homes for very reasonable terms, as many other states do. Imagine, we are the "Sunshine State", and one of only five states to not let all solar companies in our state.

Sincerely,
Mr. Ronald Peavy

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Jesus Cruz

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Dian Felder

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. David Svoboda

And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Helena Le Compte

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,

Ms. Jenna Neuvelt

FL

Subject: Please support solar energy policies

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. We have used solar power for almost 20 years to heat our pool, and are currently pursuing replacement of these panels so we can power our home using solar energy.

It is imperative that we support growing the state's solar market power to diversify our energy resources, protect our air and water, and grow the clean energy economy. The recent issues with Florida Power & Light's Turkey Point nuclear expansions and cooling debacle reinforce our need to leverage the readily accessible solar energy available to us. There is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility-owned and distributed solar.

Specifically, I encourage you to:

- Continue and expand the existing net metering program.
- Update the outdated and unnecessary interconnection procedures to lower installation costs.
- Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.
- Adopt practical rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.
- Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.
- Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects
- Put in place future requirements about the minimum percentage of solar energy (or renewable) as compared to non-renewable energy sources

Thank you for what you have done to date to ensure transparency and enforcement with our energy programs, and I implore you to do even more to be a role model commission for other states.

Sincerely,
Mrs. Donna Bahr-Landsea

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Hi, number 3 in the US in terms of sunshine, # 13 in terms of utilization. We should be a leader in the country, solar benefits everyone even poor and middle class families. More local clean energy pushes down the price of all energy. and leads to cleaner air and water. Lets capitalize on this free resource!!!!!!

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Please relax the rule that only allows utilities to sell solar generated electricity.

Not all home owners can afford to purchase a solar system, while outside investors are willing to finance the installation of solar systems on homes.

Florida residents are trying to change this restriction through a constitutional amendment; why not remove this restriction and then no constitutional amendment is needed? Also, the statutes that prohibit taxation of solar systems installed on home owner's roofs should be extended to businesses so that they can install solar systems and not have to pay additional taxes when they help our state by increasing the amount of renewable energy.

Thank you for taking public comments on ways to promote solar power in Florida. Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Richard Pinches

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Jorge Gonzalez

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Kerry Rothschild

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Terrence Willitts

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Sarah Mckenna

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Linda Lee

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Bill Yedkois

Subject: Support policies that promote a solar Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I would love it if Florida could be a sustainable energy leader and be known as, not only the Sunshine State, but the Solar State.

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Susan Sherwood

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Wendy Weldon

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Living in Naples, served by FPL, I noted the fact that less than 10% of the power came from coal. This was heartening, having lived in Ohio, served by AEP, which proudly boasted that over 90% of their power came from burning coal. That fact that did not go unnoticed by states like Tennessee to the south which traced the forest denuding acid rain to Ohio.

We are the "Sunshine State" yet rather than look to the sky many of our utilities have their heads buried in the ground for coal dust to burn. They arrogantly demand more coal at time when even the dullest and uninformed are feeling the heat of rising temperatures.

You should be doing everything in your power to allow greater use of solar energy by all means possible. We citizens are willing to pay a bit more over the next decade or so to ensure that our grandchildren have a planet to live in.

Sincerely,
Mr. James Borad

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Shelley Lang

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Judith Elliott

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. George Keisling

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Diane Navarro

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Jack Neilly

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Sincerely,
Mr. Rhett Smith

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking the time to read public comments on ways to promote solar power in Florida. I support growing the state's solar market which will diversify our energy resources, Since FPL wants to continue only one or two sources Natural gas or nuclear which destroys either our air or water. Please expand a clean energy economy. In other words, this is a NO BRAINER, and there is virtually no downside to expanding the solar market. Except FPL shareholders and Executives

We need policies that will make solar accessible to all residents, and promote growth of homeowners/ratepayers, utility owned and distributed solar.

Specifically, I encourage you to:

Update the outdated and unnecessary interconnection procedures to lower installation costs. Make utilities repair and clean up their infrastructure.

Develop renewable energy programs to make solar energy widely accessible to most Florida consumers.

Adopt COMMON SENSE RULES

Adopt fair incentive programs

Utilities shall produce transparency and accountability by bidding for their solar projects in the sunshine. . Make them accountable for their pollution before we follow California and several other states who have lost their fresh clean water and air. It's not to late.

Sincerely,
Mrs. Alexandria Larson

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Jack Dean

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Jeanine Bandiero

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Bradley Crocks

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Suzanne Bedat

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Carol Judge

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

It's incomprehensible that the Sunshine State, where the sun shines brightly nearly everyday of the year, does not use the sunshine to generate a major portion of it's power. Every new house and building should include solar panels. This should include tax credits and the possibility for homeowners to sell excess energy to power companies. Other countries and other states are doing this. Let's put Florida in the forefront of those using solar energy.

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win.
