Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ray Judah

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Barbara Evans

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida.

I have seen a petition being circulated that would allow solar power enterprises to generate and market power in competition with our regulated electric utility companies which currently supply all our power needs. To allow this to happen would, over time, hurt the reliable service we now receive. The utilities are required to maintain the power grid which delivers power to its customers in our state. Inevitably, if many of its customers purchased their power from alternative power enterprises, there would be a decline in the utilities' income and rates would increase for those remaining customers to support maintenance of the same grid system. Many customers could ill afford rate increases. The grid must be maintained to supply power when solar power is not available which will inevitable happen.

I very much favor promoting solar power. It's time to promptly compel the regulated utility companies to build solar power plants and reduce the output from fossil fuel plants to a point sufficient to maintain power supply when solar power is not available. This is the only way that we can maintain reliable power supply and still take advantage of the benefits (lower cost & less pollution) of solar power. There will be a minority of individual customers who will install their own solar power systems, but I don't believe the vast majority of customers will be willing to incur the expense so long as the utility rates are reasonable

Sincerely,
John C Smith Jr

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Allan Ryan

Subject: Change the PSC's current anti-solar polices

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I am concerned that this is an empty gesture and the PSC's request for "ways to more effectively promote solar energy in Florida" is hypocritical lip-service. Less than a year ago, the PSC voted to end the solar rebate incentives. Back in 1987, the PSC ruled against solar power purchase agreements. (Docket 860725-EU; Order 17009). It is shameful that the "Sunshine State" is one of only 4 in the country with strong anti-solar policies (created by the PSC)

The PSC already has the answer to their question, but I'll make it easier. **CHANGE YOUR ANTI-SOLAR POLICIES!!!** Don't force a cumbersome and time consuming (and inappropriate for this purpose) constitutional amendment that has become the last resort for Floridians for Solar Choice, a group which the PSC should be supporting. The "P" in PSC stands for "PUBLIC," but it's painfully clear that the agency supports big power, not the public, at least as it pertains to solar energy. Please change your tune and be part of the solution to the climate change crisis rather than adding to it. Now back to the boilerplate Sierra Club verbiage...

Growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.
Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar

through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

In closing, a reiteration of the simple solution. Replace the PSC's current anti-solar policies with pro-solar policies. Do not force Floridians for Solar Choice to use an archaic inefficient paper-only one page at a time petition process to gather 700,000 signatures for a ballot initiative to amend the State Constitution.

Thank you for your time and consideration.

Sincerely,
Mr. Andrew Lund

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Miss Ivette Vallejo

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

We live part time in upstate NY, near the border with Vermont. We see more solar installations here than in SE Florida, despite FL having twice the available sunshine. The difference reflects the failure of Florida policy. So, thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Isn't it ironic how we here in Florida use so much powder to combat the heat of the sun, when all that energy [from the sun] could be tapped and turned back upon itself? The sheer ignorance of this perplexes me.

Sincerely,
Mr. T.J. Guerra

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Sarah Wu

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thanks for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market. It makes sense for the sunshine state to harness it's sunshine! I use solar lamps which I set outside during the day and have two solar cookers. My impact is small, but with the right policies, there could be a huge impact.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

The following are statements written by the Sierra Club. I trust them to have thoroughly researched their statements. Therefore, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

There are many good reasons to promote the development and general use of solar power. Although many businesses are encouraging Fracking to access and remove oil and natural gas which are currently used for energy, that is NOT an acceptable option for Florida. Our state has limestone as its foundation. Fracking removes the water from between the layers, replacing it with God knows what. Another possible effect of Fracking, and even continued bottling of our spring waters, is the drying of the limestone rock layers. We have already seen a house in Tampa area fall into the huge hole caused by the sinkhole that developed under the house. You may remember that one of the brothers who lived there also fell into the hole and was never found. We need to preserve our fresh water resources. The broader development and use of solar energy in Florida would eliminate a need to Frack into our precious subterranean water (and gas) sources. That is a very important consideration for developing more solar power for homes and businesses in Florida.

Sincerely,
Ms. Irene Araneda

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

You and I both know that Florida, more than any other state in the union has the best potential to generate FREE sun energy. Sure, BigEnergy has a little to lose but think of all the JOBS that will be created when we go solar!

One of the best things we should do would be to cover ALL the huge parking lots of all the malls and big box stores with solar arrays. Then when we go shopping we can park in the shade of the solar panels! This solar energy could be a real money maker, I bet we could export this energy to less sunny states AND make a sweet profit.

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Valerie Fox

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Vivian D'Angio

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. ReNae Nowicki

Florida's abundant sunshine should be put to good use as solar energy.

We, and our power companies, are allowing the rest of the world to lead the way in renewable energy solutions, while we continue to rely on non-renewable fossil fuels. It is time we come to our senses and make use of all available energy, including wind, solar and geothermal, wherever it is available.

Sincerely,
Ms. Patricia Gallenkamp

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Titionna Batista

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Maria Wells

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Barry Greenstein

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Carol Jordan-Stahl

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Jill Davis

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market. The electric monopoly may be unhappy, but you're supposed to look after the general public, and with a level playing field, if solar doesn't make it, Big Energy can then go ahead as they are now. If less oil or gas is called for, it will be a relief that Shell might lose incentive to despoil the Arctic Ocean when its drilling there creates a spill it can't contain - and there's no way they could be expected to contain a slick of pollution in that climate, geography and remoteness..

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

I'm no expert, but the following steps look good to me:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Henry Lawrence

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. David Bernstein

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Mary Pilafian

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Susan Leslie

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Cindy Shelton

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Jerry Spetsieris

Mrs. Mary Detrick

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Kenneth Toole

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Susan Chamish

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Jamie Yates

Dear Florida Public Service Commission,

I could pepper this with all sorts of fancy facts and fancy words, but you get plenty of that. So, let's keep it simple - Put Sunshine to work in the Sunshine state. The financial facts should be enough. The environmental impact should be enough. This is the caveat to truly become the Sunshine State. As a Floridian whose family has called Florida home for generations, I look forward to living in a state that will move forward embracing a power source that was not available when my ancestors settled here. As a graduate of the state's public schools and universities, I am excited to think of living in a state that used technologies from its institutions of higher education. The sunshine is for more than the tourists. Let's put Sunshine to work for all of us.

Sincerely,
Ms. Pamela Lea

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida.

I support growing the state's solar market power.

This is the sunshine state and sunshine is a omnipresent source of energy that should tap into.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

This will help diversify our energy resources, protect our air and water, and grow the clean energy economy.

Please help make solar power the most important energy source in Florida.

Thanks,

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Harry Maynard

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Lance Millonzi

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Russell Collier

Ms. Sharon Jerdeman

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Robyn Mizrachi

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Mark Ondrejicka

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Sheila Marshall

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Darcy Small

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

I've been advocating the use of solar energy for many years. For instance do you know that we in Florida can do away with most if not all of the road vehicles use of petrol and diesel. If you place two coils of wire in close proximity and pass current through one then a voltage is induced across the other, that's how a transformer works. Now we place coils on the surface of our roads and another coil in the vehicle and bingo energy is picked up and stored in super capacitors, no heavy batteries. I have installed a golf cart motor in my sailing boat and ripped out the dirty heavy diesel engine.

I also want you to contact Clay Electric in Keystone Heights Fl. a Co-Op and ask about their scheme. We need to bring down the price of true sine wave inverters.

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Aileen Hamann

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Ana Maria Agrusa

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Gregg Gunther

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Elizabeth Denning

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Michelle Wood

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. John Grossenbacher

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

With FP&L just announcing that they have been granted permission to raise our electric rates to help pay for drilling for natural gas, thank you very much, (sarcasm), it's time to end the gross stupidity of restricting the sale of solar power and solar equipment by others than power companies and their monopoly on power supply, thank you very much, (sarcasm). We hear from visitors from the great white (snow and cold) north that they have non utility solar power everywhere so where is it here in the SUNSHINE state? We can only say that the politicians here in Florida owe the souls to the utility companies and the Koch brothers. Don't you think it's about time to give the freedom to choose back to the people or do you even care?

The decisions against free enterprise, freedom of choice and support of power company monopolies by the Florida Public Service Commission has definitely given us direction as to how we will vote in the upcoming 2016 general election and it will not be for anyone in the controlling political party currently in power here in Florida.

Sincerely,
Mr. Norman Wiechnick

Florida Public Service Commission
FL

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida.

The need for solar electricity in this state is twenty-years overdue, because China, Germany, Israel, and even India are ahead of Florida with the amount of solar installations these pioneers have engaged in building. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy.

The point is solar means jobs, good jobs in Florida. Right now the roof space in this state is a liability. Look at the German model and recognize how we can turn our liabilities into assets and give home-owners as means to earn rather than spend their income. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar. Especially in hurricane and storm prone states such as ours the necessity of solar (photovoltaic) electricity is crucial to recovery after hurricanes.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

We must adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements to stay competitive. Both California and New York, not to mention other states, have embarked on distributive energy as a means to assure reliability and improve infrastructure efficiency.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects. Florida needs good jobs and solar electricity can provide those right here. Florida needs a means to promote electric vehicles and solar energy does that.

Neither solar electricity, nor wind driven electricity use water to generate power. That is a huge savings that goes unaccounted for in the current rate structure. Considering the drought conditions now existing in South Florida according to the Palmer drought index the way we waste fresh-water in the state will only become more and not less important. Solar electricity is in the end the surest path to energy independence, energy reliability in a disaster, and an improved economy for a growing state.

Sincerely,
Dr. Joseph Siry

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Brian Upholz

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Ellen Contreras

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ray Allen

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Theodore Davis

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. James Mcmurtry

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida.

Isn't there a way to make building codes require new construction to include solar panels, grey water tanks, better insulation, etc.?
Preventing new buildings from becoming concrete hot boxes that will want lots of air conditioning is a powerful step.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Robert Clark

Subject: Support policies to bring major solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win in every way: there is no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

- Continue the existing net metering program; it works.
- Update the outdated and unnecessary interconnection procedures to lower installation costs.
- Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.
- Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.
- Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.
- Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Times have already changed and sustainable, alternative energy IS happening and IS the future. It may even be too late for Big Power to make all the money they could have if they'd embraced this much earlier. Now they have turned the general public into their adversaries by being so obviously against cleaning up the mess they have made and continue to make.

The sooner Big Filthy Power industry makes the switch, the sooner they will prevent their industry from totally collapsing. Big Oil is dysfunctional and is still taking everyone (the wealthy investors, CEOs, and other higher-ups, too) down with their sole goal to fill their pockets. If they had a collective brain and used it, they would have already seen they could do everyone a great service by doing what is good and right. Instead they have chosen to battle most people. This will be their Waterloo....unless they change NOW.

Oil is important but not all-purpose: we must save what little is left for those specialized purposes of non-synthesized lubricants and certain high-tech plastics instead of destroying This Good Earth with

extreme extraction methods to try to get every last ounce of oil products out of the ground. .

Sincerely,
Tina & Dennis Henize

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Susan Dewitt

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Dr. Karin Braunsberger

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Marisa Magill

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Yisel Cañas

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Donna Billing

Subject: Policies need to improve to assist us in bringing more solar to Florida

Dear Florida Public Service Commission,

I appreciate the fact the PSC is taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Through more effective policies we can move Florida's energy market into the present capabilities of the energy market and position ourselves to be leaders in harvesting renewable energy in the future.

Sincerely,
David Harbeitner

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Robert Hite

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Lisa Sapp

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Shirley Schulz

Mrs. Kathleen Doyle

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Grace Giammello

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Mary Mckinney

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Elliott Brecht

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida.

In a state that's known as the Sunshine State, it is unconscionable to deny Florida residents of the use of the sun to power their own homes. Opening up solar to Florida residents is a win-win for us all!

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to open the market to Florida consumers as quickly as possible--it's the right thing to do!!!

Sincerely,
Mrs. Mary Macomber

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Encourage the power companies to offer financing for approved solar installation that will result in a monthly charge added to the customers bill. They will earn interest, reduce new capacity investments, and cover expenses while just adding a flat amount to the monthly bills sent out. The customer will attempt to balance the new costs with their monthly electric savings on net metering. Potential savings are delayed until the balance is paid off.

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Christine Gasco

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Rick Buttery

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Christina Lihan

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. James Steinmuller

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida.

Fossil fuels will eventually get depleted, and that day is closer than most people realize or are willing to admit. We will have to move to other energy sources, and we will need fossil fuels to power the conversion, so the sooner we move towards renewable energy sources the better.

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar. Florida is the Sunshine State after all!

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Albert Marra

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Janice Shannon

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida.

Basically, solar power in Florida, for Florida, BY Florida should be the classic "no brainer."

However, costs for photovoltaics continue to put such systems out of reach for many residents. So I hope you will consider the following specific steps to open the market.

Continue the existing net metering program; it works.

Reconsider interconnection procedures to lower installation costs.

Put in place shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Create incentives to encourage customer-sited solar through purchases and leasing arrangements.

The environment thanks you. And so do I.

Sincerely,
Ms. Virginia Demers

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Paula Farkas

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Sandra Collazo

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

I want to thank you for taking public comments on ways to promote solar power in Florida.

I am writing to offer my unqualified support for growing Florida's solar market power. Doing so will help diversify our energy resources, protect our air and water, and grow a clean energy economy.

I wish to suggest that we need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to do the following:

1. Continue the existing net metering program; it works.
2. Update the outdated and unnecessary interconnection procedures in order to lower installation costs.
3. Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.
4. Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.
5. Adopt new incentive programs that encourage customer-sited solar by way of purchases and leasing arrangements.
6. Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Thank you for considering these recommendations.

Sincerely,
Mr. Hamilton Ross

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Susan De Nolf

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Heather Keim

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Lauren Odlum

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. John Clark

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Thank you for reading this and your considerations.

Sincerely,
Mr. Cary Devroedt

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Stephen Scheeren

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Karen Green

Subject: Support policies that encourage Clothes Lines and save power

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida.

One simple solution is to encourage Clothes Lines!

There is an appliance company here in Orlando that shouts: "Is your power bill too much? It is the clothes dryer!"

Educate the public about the health benefits of a few minutes in the sun and fresh air. It is good for their health and saves us money.

This is Solar Power. It's free! Let's use it.

I gave away my clothes dryer 25 years ago and have never missed it. Shame on the gated communities that ban clothes lines. They are enforcing wasteful habits!

We need policies that will make solar accessible to most residents.

Sincerely,
Gloria Peck

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Terri Fazio

And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Jerry Kranz

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments in support of Solar Power in Florida!!!

I support growing the state's solar power economy. It will diversify our energy resources, and grow a clean energy economy. Our precious water and air resources will be spared.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar. The economic benefits to this are EVERYWHERE up and down the distribution chain.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Why Florida isn't the world's hotbed for the development and implementation of Solar Energy technologies is incomprehensible! Come on!!! We are the Sunshine State. Duh!!!

When my grandfather moved to Florida in the early 1950's he used his plumbing skills to build a solar hot water heater for his home. Its really that simple. If an old Italian Farmer/Barber/Plumber can make it happen in 1950, what the heck are we waiting for????

Sincerely,
Melanie Knapp

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,

Ms. RAQUEL Saenz de la Torre

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

As a native born citizen of Florida, I have spent countless hours wondering why we are not the national leaders in utilizing solar energy. It is disgraceful how the utility companies have been successful at stonewalling progress in this area. Any progress that has been made is due to public outrage rather than voluntary actions on the part of Florida Power, Duke Energy and the like.

It is time! No more back door deals with these companies that keeps them rich and Florida consumers at a huge disadvantage; both financially and without other energy source options. Market monopoly and manipulation is illegal and is what we have been forced to deal with for decades from these companies.

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. James Smith

Subject: time for more solar power in FL is now

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support increasing solar power and diversifying our energy resources to protect our air and water, and grow the clean energy economy. Increasing our use of solar and wind power sources have no downsides. In providing energy sources to our rapidly expanding population..

Please incorporate policies including those listed below to make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. carole fox

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Sharon Wallenberg

And there is virtually no downside to expanding the solar market.

With a title of "The Sunshine State", I can't logically understand why we are NOT already doing more to promote the Solar Industry.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Elizabeth Gravuer

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Michael Goggins

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Christine Yergeau

Subject: Let's bring more solar power to Florida!

Dear Florida Public Service Commission,

This is the Sunshine State and much more needs to be done here to promote and make use of solar power. I believe that by continuing the net metering program; making solar energy more accessible to Floridians; and allowing utility companies to bid competitively on solar projects will help us make use of this OBVIOUS energy source.

Thank you!

Sincerely,
Jen Titheradge

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Cynthia Horton

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market. I already have solar panels on my roof, but I would like my neighbors to have easier access to it. Bring back financing and rebates. Help my poorer friends to afford to get solar.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Elise Principato

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win, for everyone involved...

I propose that an options installment program be implemented so that people have the OPTION of using both solar and grid based power resources...utility companies need to hold work shops that show people what will happen once the solar inlet is installed to their homes and buildings....it should be up to the residents to decide where their power is coming from...many people would be happy to accept an installation that makes their homes and businesses "solar ready" in the event that they wish to take the next step and implement the solar panels and accessory equipment later on....call it the Solar Ready Communities program if you will....

Sincerely,
Mrs. Ofelia Fajardo

Dear Florida Public Service Commission,

You have requested public comments on ways to promote solar power in Florida, and this opportunity is appreciated. I support growing the state's solar power opportunities which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. Florida, of all places, should be in this market!

We need policies that will make solar much more accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Pamela Stuckert

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Melissa Gaskins

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Kathleen Felice

I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

Sunshine is a resource we have in abundance; if we are smart about developing it, we could become an exporter of power to other states.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Charles Stewart

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. James Bateman

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Ms. Stacey Menendez

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Steve Schildwachter

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Ray Dipasquale

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Ray Dipasquale

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. Linda and I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

I am a degreed Electrical Engineer (retired) who implores you as a governing body to find ways to facilitate Solar Energy growth in Florida. I believe that we Floridians can put solar to work by encouraging individual based solar independence. Take NET metering to the next level by empowering the people of Florida to generate power at the residential level.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. Mario Castillo

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mrs. Maria Bolton-Joubert

Subject: Support policies that will bring more solar to Florida

Dear Florida Public Service Commission,

Thank you for taking public comments on ways to promote solar power in Florida. I support growing the state's solar market power which will help diversify our energy resources, protect our air and water, and grow the clean energy economy. In other words, it's a win, win, win. And there is virtually no downside to expanding the solar market.

We need policies that will make solar accessible to most residents, support local job creation for solar installers, and grow both utility owned and distributed solar.

Specifically, I encourage you to:

Continue the existing net metering program; it works.

Update the outdated and unnecessary interconnection procedures to lower installation costs.

Develop shared renewable energy programs to make solar energy widely accessible to more Florida consumers.

Adopt common sense rules to allow meter aggregation so that landowners and farmers are billed fairly when installing solar.

Adopt new incentive programs that encourage customer-sited solar through purchases and leasing arrangements.

Ensure transparency and accountability by requiring utilities to initiate competitive bidding for their solar projects.

Sincerely,
Mr. James Yonan
