- 04 | NEM is Key to Energy Resiliency in Florida

---

# SUNRUN

The national leader in solar, storage, & home energy management.

Leading industry since 2007

22 states + DC & Puerto Rico

More than a quarter million customers nationwide

On average, every  
**2.3 minutes**  
a new system is installed

Sunrun customers have saved over  
**\$300 million**  
on electricity bills

And produced  
**5 billion**  
kWh of clean energy

More than  
**5,000**

Brightbox home batteries are providing back up power during outages.

The solar installer is the fastest growing job in America.

Sunrun alone has created more than  
**4,000**  
jobs & thousands more through our partners.

# Sunrun solar offerings to Florida families

Just announced entry into select areas of FP&L after piloting (Sept 9, 2020)

# COVID-19 Impacts on the U.S. Solar Industry

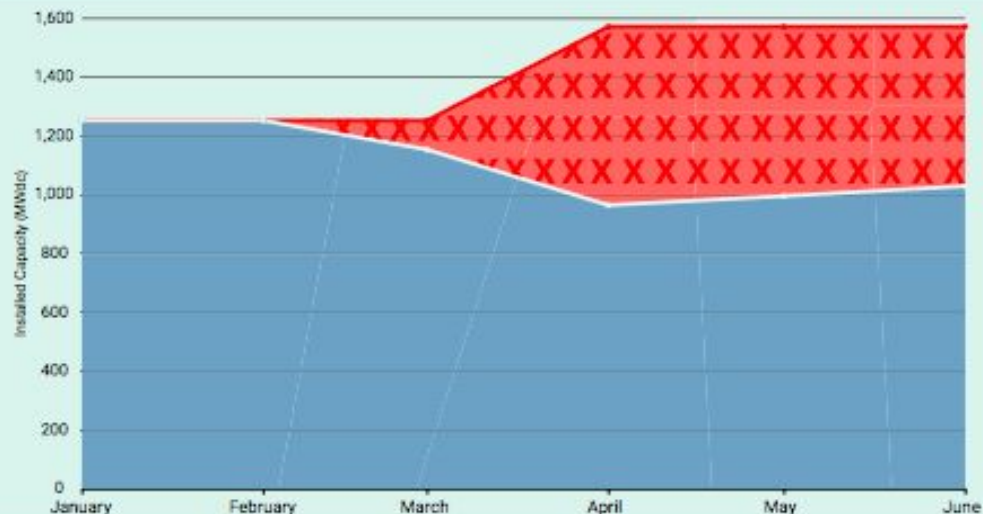

Due to COVID-19, the U.S. will install just 3 gigawatts (GW) of solar capacity in Q2 2020.

↓ **37% less solar capacity installed than pre-COVID forecasts**

The deployment losses for Q2 2020 are equivalent to powering **288,000 homes** and **\$3.2 billion** in economic investment.

## Impact of COVID-19 on 2020 U.S. Solar Deployment

- Baseline Forecast
- COVID-19 Impact

# Covid-19 has damaged Florida's Solar Industry

- 5,617 job losses (down 22%) erasing years of job growth
- Significant decrease in amount of solar installed in Florida
- Loss of an estimated 100+ MW installed in Q2 (21% loss) across the industry.
- Longer installation times due to waits and challenges both with utilities and AHJs

# What is Sunrun doing to respond safely?

- Virtual sales instead of in-person visits.
- Working with state and local governments to comply with social distancing rules
- Encourage no-contact and online permitting with local governments.
- Contactless installs including utilizing drone technology for rooftop surveys.

# Florida Rooftop Solar Projections from SEIA

# Benefits of Rooftop Solar & NEM

## NET METERING BENEFITS

### OUR COMMUNITY AND THE GRID

HELPS UTILITIES AVOID THE COST OF NEW INFRASTRUCTURE. (1)

REDUCES DEMAND AND PRICE OF ELECTRICITY, SAVING MONEY FOR ALL RATEPAYERS. (2)

REDUCES ELECTRICITY LOSSES ON THE GRID, SAVING AMERICANS MILLIONS OF DOLLARS EACH YEAR. (3)

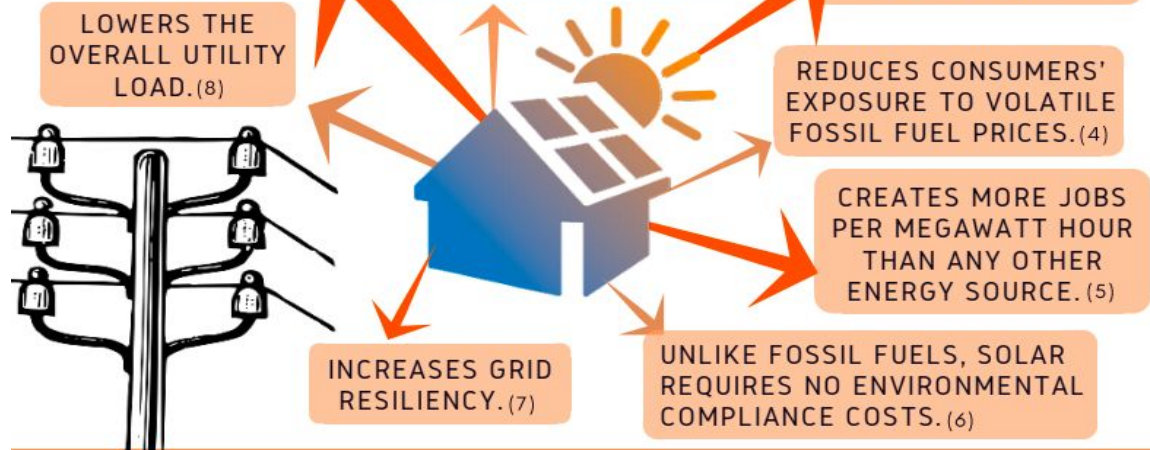

LOWERS THE OVERALL UTILITY LOAD. (8)

REDUCES CONSUMERS' EXPOSURE TO VOLATILE FOSSIL FUEL PRICES. (4)

CREATES MORE JOBS PER MEGAWATT HOUR THAN ANY OTHER ENERGY SOURCE. (5)

INCREASES GRID RESILIENCY. (7)

UNLIKE FOSSIL FUELS, SOLAR REQUIRES NO ENVIRONMENTAL COMPLIANCE COSTS. (6)

# Net Metering is benefiting ALL ratepayers

## INDEPENDENT STUDIES ACROSS THE COUNTRY SHOW NET METERING IS A FINANCIAL BENEFIT TO ALL RATEPAYERS

NET METERING WILL PROVIDE **\$36 MILLION** IN BENEFITS TO NV  
RATEPAYERS. **NEVADA 2014** (11)

NET-METERED SOLAR OFFERS A DECREASE  
IN OVERALL MISSISSIPPIANS RATES. **MISSISSIPPI 2014** (12)

SOLAR REDUCE COSTS ASSOCIATED WITH PRICE VOLATILITY  
THAT UTILITIES PASS ON TO CUSTOMERS. **MINNESOTA 2014** (10)

THE **25 YEAR** VALUE OF SOLAR ELECTRICITY IS **2.5 X**  
THE RETAIL RATE OF ELECTRICITY. **MAINE 2015** (9)

# NEM evaluation? Adoption rates are key.

- **National regulatory guidance.** NARUC's Manual on DER Rate Design and Compensation recommends at 10% penetration may justify evaluation and change of rate designs like NEM.
- **Penetration is Key.** The NH Commission relied on NARUC manual & made clear penetration levels are key to understanding when solar rate design should be discussed. NH Commission found there were no material impacts from NEM until 10% penetration was reached.
- **Full examination of costs AND benefits.** Any changes that occurred should only be done after a complete examination of costs and benefits.
- **Need enough capacity to complete cost & benefit study.** Iowa Utilities Board found 1% NEM penetration did not provide enough capacity to do a full cost and benefit analysis, and found NEM should continue.

# NEM evaluation? Adoption rates are key.

The effects of residential solar on retail electricity prices are significantly smaller than other utility expenditures.

**Net-Metered PV:** Impact at *current* penetration levels, across a range of VoS assumptions, with purely volumetric rates (U.S. average)

**Net-Metered PV:** Impact at *projected* 2030 penetration levels, across a range of VoS assumptions, with purely volumetric rates (U.S. average)

**Net-Metered PV:** Impact at *10% penetration*, across a range of VoS assumptions, with purely volumetric rates (high-pen. utility, U.S. avg. price)

**Energy Efficiency:** Impact of projected 2015-2030 EE savings, if avoided costs are valued at the same rate as solar (U.S. average)

**Natural Gas:** Range in retail electricity price across 10<sup>th</sup>/90<sup>th</sup> percentile gas price confidence intervals for 2030 (U.S. average)

**RPS:** Impact in 2030 across low and high cost scenario assumptions (U.S. average, among RPS states)

**Carbon:** Impact of CPP in 2030 across multiple studies, each considering multiple implementation scenarios (U.S. average)

**CapEx:** Gross impact of electric-industry CapEx through 2030, across range of CapEx trajectories and WACC (U.S. average)

*Notes: Current net-metered PV penetration equal to 0.4% of total U.S. retail electricity sales, as of year-end 2015. Projected 2030 net-metered PV penetration is 3.4%, based on Cole et al. (2016). VoS assumptions range from 50% to 150% of average cost-of-service. Please refer to the main body of the report for further details on how the ranges shown here were derived.*

**Figure 2. Indicative ranges for potential effects on average retail electricity prices**

A January 2017 Lawrence Berkeley National Lab (LBNL) report found that future utility capital expenditures on network upgrades and generation are expected to raise consumers' electricity prices far more than distributed solar.

LBNL estimates a 1.6-3.6 cent/kWh increase in U.S. average retail electricity prices in 2030 as a result of future utility capital expenditures, compared to a .2 cent/kWh increase **or decrease** in retail utility prices in 2030 from projected rooftop solar levels.

# Once Solar Adoption Rates hit Threshold: Cost *and* Benefit Analysis of Solar Models

**Act 62 in South Carolina can serve as one model:** Legislatively directed, passed after years of stakeholder engagement, lays out critical factors:

1. Aggregate impact of customer-generators on the electrical utility's long-run marginal costs of generation, T, & D
2. Cost of service implications of customer-generators on other customers within the same class, including an eval of whether customer-generators provide adequate rate of return to the electrical utility compared to otherwise applicable rate class when, for analytical purposes only, examined as a separate class within a cost of service study.
3. Value of DER generation according to the methodology approved by the commission; (*Avoided Energy, Energy/Line Loss, Avoided Capacity, Ancillary Services, T&D Capacity, Avoided Criteria Pollutants, Avoided CO2 Energy Cost, Fuel Hedge, Utility Integration & Interconnection Costs, Utility Admin Costs, Environmental Costs*).
4. **Direct and indirect economic impact** of the net energy metering program to the State, and
5. Any other information the commission deems relevant. [*environmental, resiliency, etc*]

# NEM supports resiliency: Enables battery adoption

- Sunrun installed first Tesla Powerwall in North America in 2016. Expanded to offer battery solutions in all states.
- Powerwall offers solution for whole home backup solutions.
- Deployed **over 10,000** Brightbox solutions nationwide
- Solar+Batteries is an elegant solution to weather related outages, but need NEM as foundation for deployment.

## PowerThrough Outages

# Home batteries accelerate transition to consumer-centered resources.

Power outages are increasing in frequency and home batteries enable backup power for customers.

Distributed home solar and batteries are more nimble and cost effective than continuing to over-invest in bulky centralized infrastructure.

# How does Sunrun Brightbox help me power through outages?

Throughout the day, your solar energy system powers your home and keeps your battery charged. Now, if there is an outage in the night, Brightbox can power the things you care about most for up to **10 hours\*** or until the sun comes up again.

Talk to your Sunrun Consultant to learn which rooms and appliances you can back up today.

Stay comfortable

Keep your food fresh

Stay connected

Watch TV

Power your lights

Open your garage door

Use the Internet

\* Backup time estimates are based on a fully charged battery and typical use of standard appliances, lights, and outlets.

# Customers want reliable and resilient energy

## Billion-Dollar Extreme Weather Disasters In The US, 2018

### Western Wildfires

California Firestorm, Summer-Fall

### Plains Droughts

Southwest/Southern, 2018

### Hail Storms

Rockies & Plains, August 6-7

### Tornadoes & Severe Weather

Central & Eastern, July 19-22

Southern & Eastern, April 13-16

Southeastern, March 18-21

### Severe Weather

Central & Eastern, May 13-15

Central Northeastern, May 1-4

### Hurricane

Hurricane Florence, September 13-16

Hurricane Michael, October 10-11

### Winter Storm

Northeast, March 1-3

Northeastern & Eastern, January 3-5

This map denotes the approximate location for each of the **14 separate billion dollar weather and climate disasters** that impacted the United States during 2018.

# Sunrun's Brightbox solar and battery product serves a range of utility and customer needs

Sunrun is delivering solar + batteries to thousands of residential customers with Brightbox. This turnkey solution can be aggregated as a grid resource.

**Back-Up Power**  
(Island during Outage)

**Grid Services**  
(Capacity, Voltage  
Active/Passive)

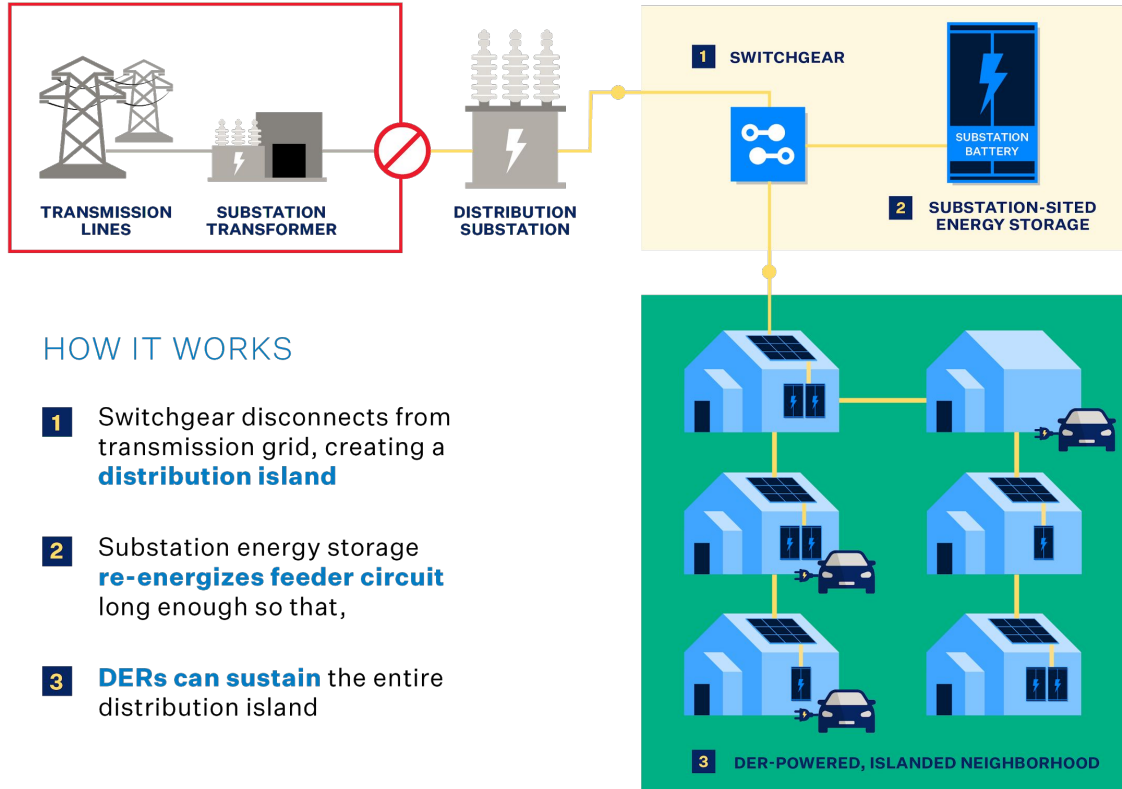

**Bill Management**  
(TOU, CPP, Hourly)

**Energy Self Supply**

## **Brightbox solves for market and customer needs:**

- HI: Backup Power and Solar Self Supply
- CA: Backup Power, TOU Bill Management, Grid Services
- FL: Backup Power
- Puerto Rico: Backup Power, Donated systems on fire stations for 24/7 power, possible future grid service asset

# Neighborhood Grid Concept

# Next Frontier: Clean Neighborhood Grids

## Proposed Solution

---

- Majority of electricity to be from renewables that are **generated and stored on-site**
- Ability to **share power and support the local needs** within the distribution network
- Ability for feeders to **temporarily disconnect at the substation**, and stay powered

## Benefits

---

- **Individuals:** Clean, local, and resilient power
- **Utility:** Continued service to ratepayers even during transmission outages
- **Society:** Increase adoption of rooftop solar and battery storage will reduce carbon emissions, grow the economy, and empower communities

# Thank You.
